Minimum Investment: USD 1,000 [initial] and USD 500 [subsequent purchases] or equivalent

Ongoing charges over a year[#]:

Class A (acc) USD: 1.87%

Class B (acc) USD: 3.18%

Class N (acc) USD: 2.62%

[#]The ongoing charges figures are based on the semi-annual financial statements for the period ended 31 December 2020. These figures may vary from year to year.

Dividend policy: Dividends, if declared, will be reinvested unless indicated by you in the application form to be paid out. Subject to any legal and regulatory requirements, the Fund may at its discretion pay dividends out of the capital or out of gross income of the Fund while charging / paying all or part of the Fund's fees and expenses to / out of the capital of the Fund, which results in an increase in distributable income for the payment of dividends by the Fund and therefore, the Fund may effectively pay dividends out of capital. The Fund may amend such distribution policy subject to the SFC's prior approval and by giving not less than one month's prior notice to investors. Any distributions involving payment of dividends out of the Fund's capital or payment of dividends effectively out of the Fund's capital (as the case may be) may result in an immediate reduction of the net asset value per share.

What is this product?

This is a fund constituted in the form of a mutual fund. It is domiciled in Luxembourg and its home regulator is Commission de Surveillance du Secteur Financier.

Investment Objective and Policy

Franklin Mutual Global Discovery Fund (the "Fund") aims to increase the value of its investments over the medium to long term.

The Fund invests principally (that is, at least two-thirds of the Fund's net assets) in:

- *common stock, preferred stock and debt securities convertible or expected to be convertible into common or preferred stock of companies of any nation as well as in sovereign debts and participations in foreign government debts that the Investment Manager believes are available at market prices less than their value based on certain recognised or objective criteria (intrinsic value)*
- *mid- and large-cap companies with a market capitalisation around or greater than USD 1.5 billion*

In exceptional market circumstances (such as extreme volatility) and on a temporary basis only, 100% of the Fund's net assets may be invested in liquid assets, with due regard to the principle of risk spreading.

The Fund can invest on an ancillary basis in:

- *securities from companies involved in mergers, consolidations, liquidations or other major corporate transactions*
- *debt securities of companies involved in reorganization or financial restructuring, including low-rated and non-investment grade securities*
- *derivatives for hedging, efficient portfolio management and investment purposes*

Although the Fund focuses on mid- to large-sized companies (companies with at least \$US1.5 billion in market capitalisation), it can invest in companies of all sizes. The investment team uses in-depth, fundamental research and analysis to find and purchase those equity and debt securities that are believed to be trading at a discount.

For the purpose of generating additional capital or income or for reducing costs or risks, the Fund may engage in securities lending transactions for up to 50% of its net assets, in a manner that is consistent with its investment policy. For the avoidance of doubt, any securities lending will be an ancillary activity of the Fund only.

Use of derivatives / investment in derivatives

The Fund's net derivative exposure may be up to 50% of the Fund's net asset value.

What are the key risks?

Investment involves risks. Please refer to the offering document for details including the risk factors.

- ***Debt securities risk:*** *The Fund is exposed to the credit/default risk of issuers of the debt securities that the Fund may invest in. Investment in the Fund is subject to interest rate risk. The debt securities will generally increase in value when interest rates fall and decrease in value when interest rates rise. Credit ratings assigned by rating agencies are subject to limitations and do not guarantee the creditworthiness of the security and/or issuer at all times. The Fund may invest in debt securities on which the issuer is not currently making interest payments (defaulted debt securities). These securities may become illiquid. The Fund's investment in securities issued or guaranteed by governments may be exposed to political, social and economic risks. In adverse situation, the governmental entity may be unwilling or unable to pay interest and repay principal, or the indebtedness may be restructured. In the event of a default on sovereign debt, the Fund may suffer significant losses. The Fund may invest in higher-yielding securities rated lower than investment grade or unrated. Such securities are generally subject to lower liquidity, higher volatility and greater risk of loss of principal and interest than high-rated debt securities.*
- ***Market risk:*** *The market values of securities owned by the Fund will tend to go up or down, sometimes rapidly or unpredictably, due to factors affecting individual issuers, particular industries or sectors within securities markets, or because of general market conditions. During a general downturn in the securities markets, multiple asset classes (including different sectors of the same asset class) may decline in value at the same time. Similarly, when markets perform well, there can be no assurance that securities held by the Fund will participate in the advance. Because the securities the Fund holds fluctuate in price in this manner, the Fund's value may go down as well as up and investors may be adversely affected.*
- ***Equity risk:*** *Equity and equity-linked securities are subject to significant price movements due to various economic, political, market and issuer-specific factors. Such changes may adversely affect the value of equities regardless of issuer-specific performance. Additionally, different industries, financial markets and securities can react differently to these changes. Such fluctuations of the Fund's value are often exacerbated in the short-term. Financial markets trends (including feared or actual failures in the banking system) may also cause large fluctuations in the prices of such securities. As a result, the Fund may be adversely affected.*
- ***Credit risk:*** *The Fund is exposed to the credit/default risk of issuers of the debt securities that the Fund may invest in. Changes in the financial condition of an issuer, changes in economic and political conditions in general, or changes in economic and political conditions specific to an issuer, are factors that may have an adverse impact on an issuer's credit*

quality and security value. Default can occur if an issuer fails to make principal and interest payments when due, which may result in a substantial loss to the Fund. Debt securities are also exposed to the risk of being downgraded, which can adversely affect and/or result in a substantial loss to the Fund.

- **Preferred securities risk:** An investment in preferred securities involves additional risks that are not typically associated with an investment in common stocks. Generally, holders of preferred securities have no voting rights with respect to the issuer unless preferred dividends are in arrears. An issuer of preferred securities may redeem the securities prior to a specified date or defer distributions for a stated period, which may negatively impact the return of the security held by the Fund. Preferred securities may be substantially less liquid than common stocks and are subject to greater credit risk than bonds and other debt instruments. The value and performance of the Fund may be adversely affected as a result.
- **Convertible securities risk:** The Fund may invest in convertible securities which are a hybrid between debt and equity, permitting holders to convert into shares of the issuer at a specified future date. Convertibles are exposed to equity movement and greater volatility than straight bond investments. Investments in convertible securities are subject to the same interest rate risk, credit risk, liquidity risk and prepayment risk associated with comparable straight bond investments. The value and performance of the Fund may be adversely affected as a result.
- **Restructuring companies risk:** Companies involved in reorganization or financial restructuring tend to have a relatively weak financial position. Restructuring could be disruptive to the business and management structure of the companies involved, which may result in substantial losses for the Fund.
- **Foreign currency risk:** The Fund will typically invest to a significant degree in securities that are denominated in currencies other than the base currency of the Fund, exposing its investments to changes in foreign exchange rates and the possibility of exchange control regulations. Changes in currency exchange rates may adversely affect the value of the Fund, and also may affect the income earned by the Fund and gains and losses realized by the Fund. The Fund may seek to hedge currency exposure, which can limit the potential for currency gains. To the extent that the Fund seeks to hedge or protect against currency exchange risk, there is no guarantee that hedging or protection will be achieved, and the value of the Fund may be adversely affected.
- **Liquidity risk:** The Fund may not be able to easily sell securities due to adverse market conditions or reduced value or creditworthiness of issuers in which it invests. The inability of the Fund to sell securities or positions may also impede the ability of the Fund to meet redemption requests in a timely manner. Certain securities may also be illiquid due to limited trading markets or contractual restrictions on their resale. Reduced liquidity due to these factors may have an adverse impact on the net asset value of the Fund.
- **Valuation risk:** Valuation of the Fund's investments may involve uncertainties and judgmental determinations. Independent pricing information may not always be available. If valuations prove to be incorrect, the investors of the Fund may be adversely affected.
- **Derivative instruments risk:** Derivative instruments involve cost, may be volatile, and may involve a leverage effect. A small market movement may give rise to a proportionately larger impact, which may cause substantial loss to the Fund. Other risks include counterparty/credit risk, liquidity risk, valuation risk, volatility risk and over-the-counter transaction risk. The Fund may also hold covered short positions through the use of derivative instruments. In adverse situations, the Fund's use of derivative instruments may become ineffective and the Fund may suffer significant losses.
- **Swap agreements risk:** In a standard "swap" transaction, two parties agree to exchange the returns (or differential in rates of return) earned or realized on particular predetermined investments or instruments. Whether the Fund's use of swap agreements will be successful in furthering its investment objective will depend on the ability of the investment manager to correctly predict whether certain types of investments are likely to produce greater returns than other investments. Swap agreements are illiquid and in the event of the default or bankruptcy of a swap agreement counterparty, the Fund may suffer a substantial loss.

- **Volatility risk:** *The debt securities in emerging markets may be subject to higher volatility and lower liquidity compared to more developed markets. The prices of securities traded in such markets may be subject to fluctuations. The bid and offer spreads of the price of such securities may be large and the Fund may incur significant trading costs.*
- **Dividend policy risk:** *The Fund's dividend policy allows for payment of dividends out of capital or effectively out of capital. Where this is done, it amounts to a return or withdrawal of part of an investor's original investment or from any capital gains attributable to that original investment. Any distributions involving payment of dividends out of the Fund's capital or payment of dividends effectively out of the Fund's capital (as the case may be) may result in an immediate reduction of the net asset value per share.*
- **Counterparty risk:** *When over-the-counter (OTC) or other bilateral contracts (such as OTC derivative contracts) are entered into, the Fund may find itself exposed to risks arising from the solvency of its counterparties and from their ability to respect the condition of these contracts and the Fund/investors may be adversely impacted.*
- **Securities lending risk:** *Securities lending transactions may involve the risk that the borrower may fail to return the securities lent out in a timely manner and the value of the collateral may fall below the value of the securities lent out, which may result in a substantial loss to the Fund.*
- **Chinese market risk:** *The Fund is subject to the risks of the Chinese market and the value of the Fund may be susceptible to adverse economic, political, policy, foreign exchange, liquidity, tax, legal or regulatory events affecting the Chinese market. The value and performance of the Fund may be adversely affected as a result.*
- **Europe and Eurozone risk:** *The Fund may invest in the Eurozone. Mounting sovereign debt burdens (e.g. any sovereigns within the Eurozone, which default on their debts, may be forced to restructure their debts and faced difficulties in obtaining credit or refinancing) and slowing economic growth among European countries, combined with uncertainties in European financial markets, including feared or actual failures in the banking system and the possible break-up of the Eurozone and Euro currency, may adversely affect interest rates and the prices of securities across Europe and potentially other markets as well. These events may increase volatility, liquidity and currency risks associated with investments in Europe. The aforesaid economic and financial difficulties in Europe may spread across Europe and as a result, a single or several European countries may exit the Eurozone or a sovereign within the Eurozone may default on its debts. In any event of the break-up of the Eurozone or Euro currency, the Fund may be exposed to additional operational or performance risks. While the European governments, the European Central Bank, and other authorities are taking measures (e.g. undertaking economic reforms and imposing austerity measures on citizens) to address the current fiscal conditions, these measures may not have the desired effect and therefore the future stability and growth of Europe is uncertain. The performance and value of the Fund may be adversely affected should there be any adverse credit events (e.g. downgrade of the sovereign credit rating or default or bankruptcy of any Eurozone countries).*

How has the Fund performed?

■ The performance of the Fund in these years was achieved under circumstances that no longer apply. The investment policy was changed in 2016.

- *Past performance information is not indicative of future performance. Investors may not get back the full amount invested.*
- *The computation basis of the performance is based on the calendar year end, NAV-to-NAV, with dividends reinvested.*
- *These figures show by how much class A (acc) USD increased or decreased in value during the calendar year being shown. Class A (acc) USD is the share class available in Hong Kong with the longest history in the Fund. Performance data has been calculated in USD, including ongoing charges and excluding subscription fee and redemption fee you might have to pay.*
- *Fund launch date: 25 October 2005*
- *Class A (acc) USD launch date: 25 October 2005*
- *Effective 25 February 2021, MSCI World Value Index-NR was added as the benchmark of the Fund to adhere to European disclosure rules regarding the use of benchmark.*

Is there any guarantee?

This Fund does not have any guarantees. You may not get back the full amount of money you invest.
