

Invesco Sustainable Global High Income Fund

31 July 2024

Morningstar Rating™
★★★

Important Information

- The Fund invests primarily in global non-investment grade debt securities, most of which are issued by corporate issuers.
- Investors should note the ESG investment risk, emerging markets risk, contingent convertibles risk, risk of investing convertibles/convertible bonds/convertible debts, concentration risk of investing in high yield debt securities and the exposure to issuers in the US, currency exchange risk, credit rating risk, volatility risk, general investment risk, and investment in bonds or other fixed income securities is subject to (a) interest rate risk (b) credit risk (including default risk, downgrading risk and liquidity risk) and (c) risks relating to high yield bonds/non-investment grade bonds and/or un-rated bonds.
- Financial derivative instruments (FDI) may be used for efficient portfolio management and hedging purpose and for investment purposes. Risks associated with FDI include counterparty/credit risk, liquidity risk, valuation risk, volatility risk and over-the-counter transaction risk. As a result of the use of FDI for investment purposes, investors should note the additional/high leverage risk. Also, the active FDI positions implemented by the Fund may not be correlated with its underlying securities positions held by the Fund which may lead to a significant or total loss to the Fund.
- For certain share class(es), the Fund may at discretion pay dividend out of the capital and/or effectively out of capital amounts to a return or withdrawal of part of an investor's original investment or from any capital gains attributable to that original investment. Any such distributions may result in an immediate reduction of the net asset value per share in respect of such share class after the monthly distribution date. (Note 1)
- In addition, investors of Monthly Distribution-1 share class that are currency hedged (MD-1 hedged) should be aware of the uncertainty of relative interest rates. The net asset value of the MD-1 hedged may fluctuate and may significantly differ from other share class due to fluctuation of the interest rate differential between the currency in which the MD-1 hedged is denominated and the base currency of the Fund and may result in a greater erosion of capital than other non-hedged share class. (Note 2)
- The value of the Fund can be volatile and could go down substantially.
- Investors should not base their investment decision on this material alone.

Objectives and investment strategy

The Fund aims to achieve a high level of income together with long term capital growth, while maintaining a lower carbon intensity than that of the Fund's benchmark (Bloomberg Global High Yield Corporate Index USD-Hedged (Total Return)).

Important Information

Name changed from Invesco Global High Income Fund on 29 April 2022. The fund objective also changed. Debt instruments are exposed to credit risk which is the ability of the borrower to repay the interest and capital on the redemption date. Changes in interest rates will result in fluctuations in the value of the fund. The fund uses derivatives (complex instruments) for investment purposes, which may result in the fund being significantly leveraged and may result in large fluctuations in the value of the fund. As a large portion of the fund is invested in less developed countries, you should be prepared to accept significantly large fluctuations in the value of the fund. The fund may invest in certain securities listed in China which can involve significant regulatory constraints that may affect the liquidity and/or the investment performance of the fund. Investments in debt instruments which are of lower credit quality may result in large fluctuations in the value of the fund. The fund may invest in distressed securities which carry a significant risk of capital loss. Derivatives and cash equivalent instruments are excluded in the calculation of Top 10 holdings. Investment involves risks. Past performance is not indicative of future performance. Investors should read the relevant prospectus for details, including the risk factors and product features. Responsible Investment Approach definitions are as follows:

ESG Integration: The process of including ESG factors in the fundamental financial analysis of companies and investments.

Negative Screen / Positive Allocation: A process that either excludes a portion of the investment universe that score badly on ESG criteria, focuses upon companies engaged in positive activities for the community or natural world, such as recycling, education or public transport or a combination of both.

Sustainable Investments: An investment in an economic activity that meets the definition of a Sustainable Investment per Article 2 (17) of the SFDR.

Impact Fund: Funds managed with the intention of generating positive, measurable social and environmental impacts, where impact has priority over financial performance.

Engagement: The process of communicating with representatives of a company as a shareholder with the aim of improving their behaviour and policies.

Voting (Equities only): Also known as Proxy Voting, it is a form of voting whereby the fund manager casts votes on behalf of their mutual fund shareholders on a variety of issues, that may include the election of board members, merger or acquisition approvals, or approving a stock compensation plan.

Glossary

ESG Characteristics: Environmental, social, and governance (ESG) information is a critical part of corporate and investment strategy and embedding material sustainability considerations into corporate and investment decisions is integral to long-term success from both financial and sustainability perspectives.

MSCI ESG Fund Rating: The Fund's ESG rating is designed to assess the resilience of the fund's aggregate holdings to long-term, financially relevant ESG risks and should facilitate the ability to rank or screen mutual funds and ETFs on a AAA to CCC ratings scale. This rating aims to provide fund level transparency and measures the ESG characteristics of the total portfolio. It is calculated as a direct mapping of MSCI ESG Quality Scores to letter rating categories. ESG Leaders are holdings with an ESG rating of AAA or AA (best in class), and ESG Laggards are holdings with an ESG rating of B or CCC.

MSCI ESG Quality Score: Calculated as the weighted average of the underlying holding's ESG scores, excluding any underlying holding where this information is not available. It is provided on a 0-10 scale, with 0 and 10 being the respective lowest and highest possible scores. MSCI scores underlying holdings according to their exposure to and management of key ESG issues, which are divided into three pillars: environmental, social and governance.

- **Environmental Pillar Score:** Provides an assessment of environmental factors including emissions, carbon footprint, fossil fuel usage and sustainable opportunities.
- **Social Pillar Score:** Relates to the operating environment of an underlying holding, including labour management, product liabilities, and health and safety.
- **Governance Pillar Score:** Provides an assessment of risk and management practices related to Corporate Governance and Corporate Behaviour.

ESG % Coverage: The percentage of the fund and comparator where MSCI ESG Research data is available.

Financed Emissions: Measure the greenhouse gas emissions associated with the investment. This figure represents the absolute overall exposure of the fund and is dependent on AUM, hence an increase in the AUM will cause the finance emissions to increase and vice versa. The fund AUM is used to calculate the Comparator's financed emissions which will also increase or decrease depending on the AUM size.

Scope 1: Covers direct emissions from owned or controlled sources.

Scope 2: Covers indirect emissions from the generation of purchased electricity, steam, heating and cooling consumed by the reporting company.

Scope 3: Includes all other indirect emissions that occur in a company's value chain.

Relative Carbon Footprint: The measure of the impact of activities on the amount of greenhouse gases produced, such as burning fossil fuels. Measured as Scope 1+ 2 Emissions per USD 1M invested.

Wtd Avg (Weighted Average) Carbon Intensity: The underlying holdings exposure to carbon intensive holdings, calculated as the weighted average of the constituent's intensity metrics: Scope 1 + 2 emissions per USD 1M revenue for corporates and total country carbon emissions per USD 1M GDP for government bonds.

% Carbon Coverage (excluding cash): This represents the % weighting of the Fund/Benchmark for which carbon data is available.
