

## KEY INVESTOR INFORMATION

This document provides you with key investor information about this Fund. It is not marketing material. The information is required by law to help you understand the nature and the risks of investing in this Fund. You are advised to read it so you can make an informed decision about whether to invest.

## VanEck J.P. Morgan EM Local Currency Bond UCITS ETF (the "Fund")

a sub-fund of VanEck UCITS ETFs plc (the "Company")

Share Class: USD A ISIN: IE00BDS67326

This Fund is managed by VanEck Asset Management B.V., a subsidiary of Van Eck Associates Corporation.

## Objectives and Investment Policy

The Fund's investment objective is to replicate, before fees and expenses, the price and yield performance of the J.P. Morgan GBI-EM Global Core Index (the "Index").

The Fund will seek to achieve its objective by investing in a diversified portfolio of bonds issued by emerging market governments that, as far possible and practicable, consist of the component securities that comprise the Index. The Index is comprised of fixed rate domestic currency government bonds with greater than 13 months to maturity issued by emerging market governments and denominated in the local currency of the issuer.

The Fund does not purchase all of the securities in the Index. Instead, the Investment Manager utilizes a "sampling" methodology in seeking to achieve the Fund's objective. As such, the Fund may purchase a subset of the bonds in the Index in an effort to hold a portfolio of bonds with generally the same risk and return characteristics of the Index. The Fund may concentrate its investments in a particular industry or group of industries to the extent that the Index concentrates in an industry or group of industries.

The Fund may invest in ancillary liquid assets and money market instruments which may include bank deposits, certificates of deposit, fixed or floating rate instruments, commercial paper, floating rate notes and freely transferable promissory notes.

The Fund may also invest in financial derivative instruments (FDIs) for efficient portfolio management or hedging purposes. The Fund may use futures, swaps and currency forwards for the purpose of reducing risk associated with currency

exposures within the Fund. This may on occasions lead to an increase in risk profile of the Fund or result in a fluctuation in the expected level of volatility. The investment in FDIs is subject to the conditions and limits contained in the Central Bank UCITS Regulations issued by the Central Bank of Ireland.

The Fund invests in the underlying (physical) securities that make up the Index and does not take part in securities lending.

The Fund may not invest more than 10% of its Net Asset Value in open-ended collective investment schemes.

The Fund, using a "passive" or indexing investment approach, attempts to approximate the investment performance of the Index by investing in a portfolio of securities that generally replicates the Index. The Investment Manager will regularly monitor the Fund's tracking accuracy.

Recommendation: This Fund may not be appropriate for investors who plan to withdraw their money within 5 years.

- Fund's base currency: U.S. Dollar
- Distribution policy: Income accumulated

The shares are admitted for trading on various stock exchanges and can be traded on the secondary market. The price of the shares offered on the secondary market may deviate from the net asset value of the shares. The return of the Fund is directly related to the return of the underlying assets minus the costs associated with the Fund. If the performance of the underlying assets decreases, the performance of the Fund will also decrease. There is no capital protection against Market Risk.

## Risk and Reward Profile

The risk and reward indicator is calculated using historical and simulated historical data. Historical data may not be a reliable indication for the future. Therefore, the risk classification may change over time.

Even if the Fund is in the lowest risk category, it does not mean it is risk free or that capital is guaranteed or protected.

This Fund is ranked at 5 because funds of this type have experienced high rises and falls in value in the past.

The following risks can be materially relevant but are not necessarily adequately captured by the synthetic risk indicator and may cause additional loss:

- Foreign Currency Risk: Because all or a portion of the Fund are being invested in securities denominated in foreign currencies, the Fund's exposure to foreign currencies and changes in the value of foreign

currencies versus the base currency may result in reduced returns for the Fund, and the value of certain foreign currencies may be subject to a high degree of fluctuation.

- Credit Risk: The issuer or guarantor of a debt security may be unable and/or unwilling to make timely interest payments and/or repay the principal on its debt or to otherwise honour its obligations. Bonds are subject to varying degrees of credit risk which may be reflected in credit ratings. There is a possibility that the credit rating of a bond may be downgraded after purchase, which may adversely affect the value of the security.
- Emerging Markets Risk: Investments in emerging market countries are subject to specific risks and securities are generally less liquid and less efficient and securities markets may be less well regulated. Specific risks may be heightened by currency fluctuations and exchange control; imposition of restrictions on the repatriation of funds or other assets; governmental interference; higher inflation; social, economic and political uncertainties.
