What is this product?

This is a fund constituted in the form of a mutual fund. It is domiciled in Luxembourg and its home regulator is the Commission de Surveillance du Secteur Financier (CSSF).

Objectives and Investment Strategy

The Sub-Fund aims to achieve capital growth by investing in the equity instruments of internationally quoted companies throughout the world involved in the exploration, production or distribution of oil, gas and other energy sources. In addition, investments may also be made in companies which service the energy industry.

The Sub-Fund may invest up to 5% of its net asset value in onshore securities issued in Mainland China (for example, China A Shares and B Shares).

The Sub-Fund may use derivatives for the purposes of hedging and/or efficient portfolio management.

The Sub-Fund is actively managed. This means the Investment Manager is free to select investments with the aim of achieving the Sub-Fund’s objectives. The Sub-Fund uses the MSCI AC World Energy + Global Environment ex Select GICS 10-40 (Net Return) Index for performance comparison and risk management. The Sub-Fund does not seek to replicate the composite index. It will generally hold assets that are components of the composite index, but not in the same proportions, and it is allowed to hold assets which are not components of the composite index. The Sub-Fund will therefore generally

look different from the composite index, and the Investment Manager will monitor performance differences.

The Sub-Fund currently does not intend to enter into any securities lending, repurchase and/or reverse repurchase transactions. The prior approval of the SFC will be sought and at least one month's prior notice would be given to shareholders should there be a change in such intention.

Use of derivatives / investment in derivatives

The Sub-Fund's net derivative exposure may be up to 50% of its net asset value.

What are the key risks?

Investment involves risks. Please refer to the offering document for details including the risk factors.

- **Investment risk** – The underlying investments of the Sub-Fund may fall in value due to any of the key risk factors below and therefore your investment in the Sub-Fund may suffer losses. You may not get back the full amount of money you invest. In addition, the Sub-Fund primarily invests in equities or equity-related securities. Generally, equities or equity-related securities are subject to higher volatility and therefore higher risk of loss, compared to other instruments such as bonds, money markets instruments or bank deposits.
- **Energy sector risk** – The Sub-Fund invests in a small number of sectors (i.e. energy) which may subject it to greater volatility than a more broadly diversified portfolio. The sectors may decline even while broader based equity market indices are rising. The Sub-Fund offers exposure to commodities and may include additional risks e.g. political risk, natural events or terrorism. This may influence the production and trading of commodities and the value of financial instruments offering exposure to such commodities.
- **Smaller company risk** – The Sub-Fund may invest in smaller company shares (for example, those in the energy sector) which may be less liquid and more volatile than the shares of larger companies, due to the smaller number of shares in issue and the frequently less diversified and less established nature of the business. These factors can create a greater potential for significant capital losses.
- **Derivatives usage risk** – The Sub-Fund may use derivatives for the purposes of hedging and/or EPM. Investments in derivatives involve additional risks such as leverage risk, counterparty risks, liquidity risk, valuation risk, volatility risk and over-the-counter transaction risk. In adverse situations, the Sub-Fund's use of derivatives may become ineffective in hedging and/or in EPM and the Sub-Fund may suffer significant losses.
- **Currency risk** – Underlying investments of the Sub-Fund may be denominated in currencies other than the base currency of the Sub-Fund. Also, a class of shares may be designated in a currency other than the base currency of the Sub-Fund. The net asset value of the Sub-Fund may be affected unfavorably by fluctuations in the exchange rates between these currencies and the base currency and by changes in exchange rate controls.

How has the fund performed?
