Risk and Reward Profile

The above rating is based on the historic volatility of the Net Asset Value of the Share Class over the last five years and may not be a reliable indication of the future risk profile of the Share Class.

The risk and reward category shown above is not guaranteed to remain unchanged and may change over time.

A Share Class with the lowest risk rating does not mean a risk-free investment.

Why is this Share Class in this category? This Share Class is classified in category 5 because its Net Asset Value has shown medium to high fluctuations historically.

Other material risks:

- ▶ The value of your investment may fall as well as rise and you may get back less than you originally invested.
- ▶ The value of equity and equity-linked securities may fluctuate in response to the performance of individual companies and general market conditions. Furthermore, participation notes run the risk of counterparty default which may result in the loss of the full market value of the note.
- ▶ Emerging markets may be subject to increased political, regulatory and economic instability, less developed custody and settlement practices, poor transparency and greater financial risks. Emerging market currencies may be subject to volatile price movements.

Emerging market securities may also be subject to higher volatility and be more difficult to sell than non-emerging market securities.

- ▶ The Fund may invest in China A-Shares through the China-Hong Kong Stock Connect Programmes which are subject to regulatory change, quota limitations and also operational constraints which may result in increased counterparty risk.
- ▶ The value of bonds and other debt securities may change significantly depending on market, economic and interest rate conditions as well as the creditworthiness of the issuer. Issuers of bonds and other debt securities may fail to meet payment obligations (default) or the credit rating of bonds and other debt securities may be downgraded. These risks are typically increased for below investment grade and certain unrated securities, which may also be subject to higher volatility and be more difficult to sell than investment grade securities.
- ▶ The Fund invests in securities of smaller companies which may be more difficult to sell, more volatile and tend to carry greater financial risk than securities of larger companies.
- ▶ As the portfolio of the Fund is primarily focused on generating income, it may bear little resemblance to the composition of its benchmark.
- ▶ Movements in currency exchange rates can adversely affect the return of your investment.
- ▶ This Fund charges the annual fee of the Authorised Corporate Director (ACD) against capital, which will increase the amount of income available for distribution to Shareholders, but may constrain capital growth. It may also have tax implications for certain investors.
- ▶ The Fund may invest in credit linked notes which involve the risk of the underlying credit instrument decreasing in value or defaulting and the risk of the issuer of the credit linked note becoming insolvent.
- ▶ Further information about risks can be found in "Part 11: Risk Warnings" of the Prospectus.
