

Key Investor Information

This document provides you with key investor information about this fund. It is not marketing material. The information is required by law to help you understand the nature and the risks of investing in this fund. You are advised to read it so you can make an informed decision about whether to invest.

Fidelity Strategic Bond Fund

a sub-fund of Fidelity Investment Funds

W Income Shares (ISIN: GB00B469J896)

This fund is managed by FIL Investment Services (UK) Limited

Objectives and Investment Policy

- The fund aims to deliver an income with the potential to increase the value of your investment.
- The fund will be at least 70% exposed to sterling denominated (or hedged back to sterling) global debt instruments e.g bonds, which could include government and corporate bonds in countries considered to be emerging markets as determined by the Investment Manager at its sole discretion. Hedging back to sterling aims to reduce the risk of exposure to other currencies.
- Emerging markets are countries progressing toward becoming advanced, usually shown by some development in financial markets, the existence of some form of stock exchange and a regulatory body.
- The remainder will be invested in other investment types such as cash and derivatives.
- Derivatives are investments whose value is linked to another investment, or to the performance of a stock exchange or to some other variable factor, such as interest rates and used to reduce risk or transaction costs and/or to generate extra income or further increase the value of your investment.
- The fund may also use derivatives with the aim of achieving the investment objective.
- The fund is actively managed without reference to a benchmark. The Investment Manager identifies suitable opportunities for the fund utilising in-house research and investment capabilities.
- The fund has full discretion in its choices of investments within its objectives and policies.
- Income from the fund is either paid out to you or it is used to buy you more shares in the fund.
- As the fund's primary aim is to generate an income, some charges will be taken from the fund rather than the income generated by the fund. This means the amount payable as income may be increased and the potential to increase the value of your investment may be reduced.
- Shares can usually be bought and sold each business day of the fund.

Risk and Reward Profile

- Historical data may not be a reliable indication for the future.
- The risk category shown is not guaranteed and may change over time.
- The lowest category does not mean a "risk free" investment.
- The risk and reward profile is classified by the level of historical fluctuation of the Net Asset Values of the share class, and within this classification, categories 1-2 indicate a low level of historical fluctuations, 3-5 a medium level and 6-7 a high level.
- The value of your investment may fall as well as rise and you may get back less than you originally invested.
- The fund may invest in instruments denominated in currencies other than the fund base currency. Changes in currency exchange rates can therefore affect the value of your investment.
- Currency hedging may be used which aims to reduce the effect of such changes. However, the effects may not be completely eliminated to the degree expected.
- The use of derivatives may result in "leverage" by which we mean a level of exposure which could expose the fund to the potential of greater gains or losses than would otherwise be the case.
- There is a risk that the issuers of bonds may not be able to repay the money they have borrowed or make interest payments. While we seek to mitigate this, the fund may be exposed to the risk of financial loss if it invests into an instrument issued by an entity that subsequently defaults on its borrowings. Losses may also be realised if an entity that the fund is exposed to ceases to make interest payments over a period of time or indefinitely. Bond prices have an inverse relationship with interest rates such that when interest rates rise, bonds may fall in value. Rising interest rates may cause the value of your investment to fall.
- The fund may be exposed to the risk of financial loss if a counterparty used for derivative instruments subsequently defaults.
