**iShares Bloomberg Enhanced Roll Yield
Commodity Swap UCITS ETF**

A sub-fund of iShares VI plc

USD (Acc) Share Class

ISIN: IE00BZ1NCS44

Exchange Traded Fund (ETF)

Manager: BlackRock Asset Management Ireland Limited

Objectives and Investment Policy

- ▶ The Share Class is a share class of a Fund which aims to achieve a return on your investment, through a combination of capital growth and income on the Fund's assets, which reflects the return of the Bloomberg Enhanced Roll Yield Total Return Index, the Fund's benchmark index (Index).
- ▶ The Index measures the return on commodity futures contracts comprised within the Bloomberg Commodity Enhanced Roll Yield Index combined with the notional value of such futures invested at the most recent weekly auction rate for 3 Month US Treasury Bills and aims to mitigate the effects of negative roll yield on the performance of the Benchmark Index. Roll yield is the difference between the prices of the shorter term and the longer term futures contracts when they are rolled. A futures contract on a commodity is a type of financial derivative instrument (FDI) traded on an exchange which locks in the price at which a commodity can be bought or sold at a future date. Futures contracts need to be 'rolled' prior to maturity in order to maintain exposure and to avoid physical delivery of the underlying commodity. A FDI is an investment the price of which is based on one or more underlying assets.
- ▶ The Index is designed to be a liquid and diversified benchmark for commodity investments representing energy, precious metals, industrial metals, agriculture (including soybeans and corn) and livestock. The Index is designed to provide broad-based exposure to commodities as an asset class, since no single commodity or commodity sector is expected to dominate the Index in normal market conditions.
- ▶ The Index is subject to capping restrictions (which are applied at the point of its annual rebalance and may be exceeded in between rebalances) to maintain diversification.
- ▶ Commodities eligible for inclusion in the Benchmark Index include: Brent crude oil, gasoil, WTI crude oil, heating oil, natural gas, gasoline, gold, silver, copper, zinc, tin, nickel, lead, aluminium, Chicago wheat, Kansas wheat, soybean, soybean oil, soybean meal, corn, cotton, coffee, sugar, live cattle, lean hogs and feeder cattle. The Index is composed of three to four futures contracts for each commodity. The Benchmark Index rolls to a new set of futures contracts for each commodity on a monthly basis over a period of ten business days seeking to maintain diversified curve exposure over time).
- ▶ The Fund invests in FDIs and will in particular invest in unfunded total return swaps in order to achieve its investment objective. A swap agreement is typically used to achieve a specified return determined by an underlying such as a return on an index.
- ▶ The Fund may invest directly in US Treasury Bills, money market instruments, including instruments issued or guaranteed by governments or public international bodies globally, and deposits with credit institutions. The Fund may also invest into, certificates of deposit, commercial paper and other fixed income securities or money market funds.
- ▶ The Fund intends to replicate the performance of the Index by gaining an indirect exposure, via FDIs, to the individual constituents of the Index.
- ▶ The Fund may also engage in short-term secured lending of its investments to certain eligible third parties to generate additional income to off-set the costs of the Fund.
- ▶ Recommendation: This Fund is suitable for medium to long term investment, though the Fund may also be suitable for shorter term exposure to the Index.
- ▶ Your shares will be accumulating shares (i.e. income will be included in their value).
- ▶ Your shares will be denominated in US Dollar, the Fund's base currency.
- ▶ The shares are listed on one or more stock exchanges and may be traded in currencies other than their base currency. The performance of your shares may be affected by this currency difference. In normal circumstances, only authorised participants (e.g. select financial institutions) may deal in shares (or interests in shares) directly with the Fund. Other investors can deal in shares (or interests in shares) daily through an intermediary on stock exchange (s) on which the shares are traded. Indicative net asset value is published on relevant stock exchanges websites.

Risk and Reward Profile

- ▶ The risk indicator was calculated incorporating simulated historical data and may not be a reliable indication of the future risk profile of the Share Class.
- ▶ The risk category shown is not guaranteed and may change over time.
- ▶ The lowest category does not mean risk free.
- ▶ The Share Class is rated six due to the nature of its investments which include the risks listed below. These factors may impact the value of the Share Class or expose the Share Class to losses.
 - Credit risk, changes to interest rates and/or issuer defaults will have a significant impact on the performance of fixed income securities. Potential or actual credit rating downgrades may increase the level of risk.
 - Investment risk is concentrated in specific sectors, countries, currencies or companies. This means the Fund is more sensitive to any localised economic, market, political, sustainability-related or regulatory events.

- Derivatives may be highly sensitive to changes in the value of the asset on which they are based and can increase the size of losses and gains, resulting in greater fluctuations in the value of the Fund. The impact to the Fund can be greater where derivatives are used in an extensive or complex way.
- The prices of commodities tend to experience greater variations than other asset classes (e.g. equities or fixed income securities). Investments in commodities are therefore potentially riskier than other types of investments.
- ▶ Particular risks not adequately captured by the risk indicator include:
 - Counterparty Risk: The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Share Class to financial loss.
 - The Fund's ability to track the benchmark's performance is reliant on the counterparties to continuously deliver the performance of the benchmark in line with the swap agreements (i.e. counterparty risk) and would also be affected by any spread between the pricing of the swaps and the pricing of the benchmark. If any swap counterparty fails to provide sufficient assets as security for amounts owed to the Fund, there might be an increased counterparty risk exposure at a given time.

Charges

The charges are used to pay the costs of running the Share Class, including the costs of marketing and distributing it. These charges reduce the potential growth of your investment.

*Not applicable to secondary market investors. Investors dealing on a stock exchange will pay fees charged by their stock brokers. Such charges are publicly available on exchanges on which the shares are listed and traded, or can be obtained from stock brokers.

*Authorised participants dealing directly with the Fund will pay related transaction costs including, on redemptions, any applicable capital gains tax (CGT) and other taxes on underlying securities.

The ongoing charges figure is based on the fixed annualised fee charged to the Share Class in accordance with the Fund's prospectus. This figure excludes portfolio trade related costs, except costs paid to the depository and any entry/exit charge paid to an underlying collective investment scheme (if any).

** To the extent the Fund undertakes securities lending to reduce costs, the Fund will receive 62.5% of the associated revenue generated and the remaining 37.5% will be received by BlackRock as the securities lending agent. As securities lending revenue sharing does not increase the costs of running the Fund, this has been excluded from the ongoing charges.
