I Introduction

Fidelity Funds (the "Company") is an open-ended investment company established in Luxembourg as a société d'investissement à capital variable ("SICAV"). It has an umbrella structure and its assets are held in a number of different funds ("sub-funds"). Each sub-fund is a separate portfolio of securities and other assets managed in accordance with specific investment objectives. Separate classes of shares in the Company (the "Shares") are issued in relation to the sub-funds. Each sub-fund provides an investment opportunity in professionally managed pools of securities in different geographical areas and currencies, with the investment objective of capital growth, income or a balance between capital growth and income.

Shares are authorised for sale in a number of jurisdictions and may be listed on the Luxembourg Stock Exchange's Euro MTF market. However, shares in the Reserved Funds and the Institutional Reserved Funds are not presently listed. Further information on the stock exchange listings can be found on https://www.bourse.lu/official list or may be obtained from the Management Company upon request.

II Financial Statements

The Board of Directors of the Company (the "Board") submits its report and the audited financial statements for the year ended 30 April 2024. The audited financial statements are set out on pages 155 to 735 of this Annual Report, with results for the year appearing in the Statement of Operations and Changes in Net Assets on pages 618 to 643. Dividend information for the sub-funds is detailed on pages 690 to 724.

A copy of the Annual Report can be found on the Fidelity website. A hard copy of the Annual Report may be obtained upon request from either the offices of the companies registered as distributors or from the Registered Office of the Company.

Comparative figures for the previous year can be found in the Annual Report of the Company for the year ended 30 April 2023.

III Activities during the year

During the year, the company followed the normal activities of an open-ended investment company. The Investment Manager's Report that follows gives an overview of performance. As at 30 April 2024, the number of registered Shareholders worldwide totalled 10,931. However, the total number of investors in the Company is much greater than the number of registered Shareholders due to the fact that certain registered Shareholders may represent the holdings of many underlying clients. Assets under management as at 30 April 2024 exceeded USD 138 billion.

The Directors may from time to time close sub-funds as well as launch further sub-funds with different investment objectives, subject to the approval of the Commission de Surveillance du Secteur Financier ("CSSF").

At the year end, the Company consisted of 132 active sub-funds.

Details of changes to the range of sub-funds during the year are provided in the Notes to the Financial Statements on pages 677 to 735.

IV Board of Directors

The Directors of the Company as at 30 April 2024 are listed on page 5. Seven of the nine Directors serving as at 30 April 2024 are considered non-executive Directors, three of whom are considered by the Board to be independent of the Investment Manager and free from any other relationship which could materially interfere with the exercise of their independent judgment.

There has been the following change to the Board during the period to 30 April 2024:

Glen Moreno resigned with effect from 31 December 2023.

V Management of the Company

FIL Investment Management (Luxembourg) S.A. ("FIMLUX") as the Management Company is responsible for the investment management, administration and distribution functions of the Company. FIMLUX may delegate part or all of such functions to third parties, subject to overall control and supervision. With the consent of the Company, FIMLUX has delegated the investment management function to FIL Fund Management Limited ("FFML") and the distribution function to FIL Distributors ("FID").

FIMLUX provides services to the Company in connection with keeping the Company's accounts, determination of the Net Asset Value of shares in each sub-fund on each Valuation Date and dispatch of dividend payments.

FIMLUX is responsible for the production of the Annual Report and Accounts of the Company for each financial year, which are required under general principles to give a true and fair view of the state of affairs of the Company. In accordance with those same principles, FIMLUX is responsible for:

- selecting suitable accounting policies and applying them consistently;
- preparing the Annual Report and Accounts on a going concern basis;
- maintaining proper accounting records which disclose at any time the financial position of the Company; and
- complying with both the Luxembourg Law of 10 August 1915 on commercial companies, as amended, and the Luxembourg Law of 17 December 2010, as amended, on undertakings for collective investment.

Conducting Officers

As at 30 April 2024 the Conducting Officers ("COs") appointed by FIMLUX were as listed on page 5.

Conducting Officers' Responsibilities

The COs have a duty to ensure that the tasks delegated to FFML and to FID as well as the administrative functions carried out by the Management Company are performed in compliance with Luxembourg Law, the Company's Articles of Incorporation and the current Prospectus. Amongst other things, the COs ensure compliance with the investment restrictions of the Company and oversee the implementation of the investment policy of each sub-fund by the appointed Investment Manager.

The Management Company and/or the COs report to the Board on a quarterly basis and the COs inform the Management Company and the Board without delay of any materially adverse matters resulting from the actions of the Investment Manager, the General Distributor or of the Management Company in relation to the administrative functions.

VI Role of Investment Manager and Central Administrative Agent

FFML provides day-to-day investment management to the Company, under the supervision and subject to the control of the Board and FIMLUX. FFML is authorised to act on behalf of the Company and to select agents, brokers and dealers through whom to execute transactions and is required to provide the Board and FIMLUX with any reports it may require.

FFML may receive investment advice from, and act upon the advice of, any company within the holding company FIL Limited ("FIL"), including affiliate companies of FFML, and may execute, transact and otherwise carry out its functions, duties and obligations with or through any of these Fidelity companies. FFML remains responsible for the proper performance by such companies of those responsibilities.

The duties of the Investment Manager include the design, implementation and maintenance of controls and procedures to administer the assets of the Company and to manage its affairs properly. The process extends to operational and compliance controls and risk management. In addition, the Company and FIMLUX have appointed FIL to provide services in relation to the investments of the sub-funds including valuation, statistical, technical, reporting and other assistance.

VII Corporate Governance

The Board applies a clear and transparent corporate governance framework for the management of the Company's affairs.

- 1. The Board has adopted the principles of good governance as set out in the ALFI (Association of the Luxembourg Fund Industry) Code of Conduct updated and reissued in 2022 and considers that the Company has been in compliance with it in all material respects throughout the financial year ended 30 April 2024.
- 2. There are contractual arrangements in place governing the relationships with FIMLUX, FFML, FID and FIL as well as other third party suppliers to the Company.
- 3. The Directors take decisions in the interests of the Company and its Shareholders and refrain from taking part in any deliberation or decision which creates conflict between their personal interests and those of the Company and its Shareholders.
- 4. The Board meets at least four times a year. The Board requests and receives reports from the COs, FIMLUX, FFML, and FID on the various activities including compliance controls and risk management undertaken by the relevant FIL companies. Senior representatives of FIMLUX, FFML and FID attend meetings by invitation, thus enabling the Board of Directors to question the reports presented to it.
- 5. As part of the control framework within FIL, all FIL group employees are subject to the FIL Code of Conduct and its associated policies, which, amongst other things, set out procedures for personal account dealing in securities. The Board receives regular reports from the FIL Ethics Office on Employee Personal Trading to ensure that any conflicts of interest between personal accounts dealing by FIL group staff and the interests of the Company are properly managed.
- 6. The nomination of new Directors is considered by the Board and is subject to the approval of the CSSF and ultimately the approval of Shareholders at the Annual General Meeting. The level of Directors' fees is put to Shareholders for approval, in accordance with the Articles of Incorporation. Directors who are employed by FIL or its subsidiaries, its holding company FIL, or its subsidiaries have waived their fees for the year ended 30 April 2024. For those Directors that have not waived their fees, the remuneration earned for the year ended 30 April 2024 was in aggregate USD 456,790 subject to Shareholder approval, as set out on page 685 of this Annual Report. For comparison purposes the EUR equivalent was EUR 424,147.
- 7. The Directors are committed to ensuring that Shareholders are kept informed of matters relevant to their investment and that all Shareholders are treated fairly. The maintenance and integrity of information concerning the Company on the Fidelity website is the responsibility of FIL. FIMLUX is responsible for the accuracy of translations of documents which may be available to investors in languages other than English. The Directors consider and, if thought fit, approve the English form of the financial statements presented to them at the relevant Board meetings.

VIII Other Information

Proxy Voting

FFML has a policy of voting on equity securities where it is possible to do so, unless the loss of liquidity as a result of attendant share blocking is deemed to outweigh the expected benefits to be gained. Such voting is undertaken in accordance with written proxy voting guidelines employed by the FIL group, of which FFML is a part, and takes account of prevailing local market best practices. The Board of the Management Company reviews and adopts the proxy voting policy, activity and guidelines annually. FIL's Principles of Ownership, which summarises how FIL engages with companies in which the Company's sub-funds have invested, can be accessed from the Corporate Governance section of FIL's website (https://www.fidelityinternational.com).

Commissions and Internal crossing

FFML uses supplemental research in the course of its work for the Company and other clients provided by brokers through whom the Investment Manager executes transactions for the Company and other clients. All dealing commission paid by the Company and other clients on trades with brokers account only for the costs of executing the trade. All supplemental research used by the Investment Manager is valued and paid for separately from execution and other relationships with brokers in accordance with inducement regulations.

Directors' Report

The Company participates in the Investment Manager's interfunding programme whereby FIL's traders, on occasion, identify situations where an account or sub-fund managed by FIL is buying the same security that another account or sub-fund is selling. If a trader can confirm that it would be in the interests of both accounts to execute a transaction between them rather than in the market then an interfund transaction is executed. These transactions amounted to USD 244,906,049 during the year under review.

Swiss investors

Swiss investors are advised that with the exception of Asia Pacific Multi Asset Growth & Income Fund, Greater China Fund II, Sustainable Asia Equity II Fund, Institutional European Larger Companies Fund, Multi Asset Target Income 2024 Fund, the Institutional Target Funds, the present sub-funds of the Company have been authorised by the Swiss Financial Market Supervisory Authority for distribution in Switzerland.

IX Business of the Annual General Meeting

The Board of Directors is proposing the following resolutions be put to the Shareholders at the Annual General Meeting of the Company to be held on 3 October 2024 at noon:

- the presentation of the Report of the Board of Directors;
- the presentation of the Audit Report;
- the approval of the Statement of Net Assets and Statement of Operations and Changes in Net Assets for the year ended 30 April 2024;
- the discharge of the Board of Directors;
- the election/re-election of Directors;
- the approval of the payment of Directors' fees;
- the re-election of the external Auditor;
- the approval of the payment of dividends; and
- consideration of such other business that may properly come before the Annual General Meeting under the Articles of Incorporation.

BOARD OF DIRECTORS

FIDELITY FUNDS

30 July 2024

This Annual Report of the Company does not constitute an offer of shares. Shares are offered on the basis of the information contained in the current Prospectus (and the documents referred to within it) supplemented by the last available Annual Report of the Company and any subsequently published Semi-Annual Report. Copies of the current Prospectus, latest Annual and Semi-Annual Reports and Portfolio Changes for the Company are available free of charge from the registered office of the Company or from any of the companies registered as distributors of the Company, or, for investors in Switzerland, from the Representative of the Company in Switzerland.

This Annual Report has been approved for circulation in the United Kingdom by FIL Investments International, UK distributor of the Company, authorised and regulated in the UK by the Financial Conduct Authority.

Investment Manager's Report*

Equity Markets

Global equities rose over the 12-month period to April 2024. Equity markets delivered muted performance over the first half of the period as inflation moderated but remained above target levels and led major central banks to continue to raise interest rates. Concerns around the debt ceiling and a rating downgrade for government debt in the US, along with geopolitical tensions in the Middle East also weighed on sentiment. Nevertheless, equities rallied strongly in the latter half of the period as central banks in major developed markets left policy rates unchanged. Furthermore, robust corporate earnings, resilient economic data and moderating inflationary pressure raised hopes for a soft landing and supported prospects for interest rate cuts in 2024.

Source: Refinitiv DataStream, Total Returns in USD rebased to 100, MSCI World index and BofA ML Global Broad Market index, 30.04.2023 - 30.04.2024

Source: Refinitiv DataStream, Total Returns (%), USD, 30.04.2023 - 30.04.2024

Against this global backdrop, equities in the US and Japan gained the most. Emerging markets also ended higher but lagged developed markets, due to sluggish economic growth in China. At a sector level, information technology (IT) and telecommunication companies rose strongly as the artificial intelligence (AI) theme supported investor sentiment.

European equities rallied, though there was some volatility along the way. Sentiment remained fragile amid elevated interest rates and geopolitical tensions. However, markets bounced back strongly towards the end of 2023 amid cooling inflation. European equities were supported at the start of 2024 by resilient economic and corporate data, as well as a number of dovish cues from major central banks. In April, markets responded negatively to speculation that central banks will not ease their monetary policies as quickly as previously hoped, given resilient growth and sticky inflation data. While the European Central Bank (ECB) maintained interest rates at record-high levels during its April meeting, officials indicated that a looser monetary policy would be appropriate if inflation continues to converge towards its 2% target. ECB President Christine Lagarde emphasised that the bank's future moves will be data-dependent rather than following a predetermined rate trajectory.

UK equities rose, despite a slew of challenges including persistent recessionary fears and monetary policy tightening. Geopolitical events also remained in focus, following the escalating conflict between Israel and Palestine, which started in October. Meanwhile, the UK grappled with some of the highest inflation in developed markets, prompting the Bank of England (BoE) to aggressively raise rates to 5.25%, pushing borrowing costs to levels last seen in 2008. However, in late October, the market narrative swiftly began to turn. Decelerating inflationary pressures allowed the BoE to keep interest rates unchanged at recent meetings after 14 successive rate hikes. This led investors to believe that we may be approaching the peak of interest rate increases, while positive data surprises increased conviction in the soft-landing narrative, providing a tailwind for equities. This sentiment gained further momentum in March, after BoE Governor Andrew Bailey hinted that the UK economy was progressing to the point where the central bank may start cutting interest rates.

US equities rose over the period. Markets started on a cautious note due to concerns around the debt ceiling, which was resolved in June, when the US Senate approved the debt ceiling bill to avoid a default on federal government debt. Surging oil prices, rising bond yields and concerns over a government shutdown triggered a sell-off towards the end of the third quarter. Markets rebounded strongly in November, supported by expectations for rate cuts in 2024 as central banks appeared to have reached the peak of their interest rate tightening cycles. 2024 started on a weak note as the technology-based Magnificent Seven stocks (Microsoft, Apple, Nvidia, Alphabet, Meta, Tesla and Amazon) faltered following strong performance during the fourth quarter. Nevertheless, hopes for interest rate cuts and a strong start to earnings season drove markets to record highs by the end of the first quarter of 2024. April, however, started on a weak note as the Consumer Price Index (CPI) continued to rise to 3.5% on a year-on-year basis.

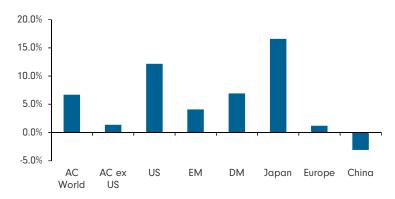

Japanese equities rose as extended buying by overseas investors drove share price gains. Market participants were encouraged by a steady stream of corporate governance related developments, spurred by reform measures from the Tokyo Stock Exchange, and largely positive domestic earnings. In March, the Bank of Japan (BoJ) announced its decision to end its negative interest rate policy and eliminate yield curve controls. This was the first move to tighten the monetary policy in Japan in nearly two decades. From now on, the BoJ's primary policy tool will be short-term interest rates, which it aims to keep at around 0–0.1%. The lifting of unconventional easing measures was interpreted as a dovish hike and the yen subsequently fell to a 34-year low against the US dollar. Value stocks outperformed growth names over the period.

Equities in the Pacific ex Japan region advanced. The period started on a positive note amid expectations of policy support from China. However, subdued macroeconomic data releases and renewed stress on the financials and real estate sectors in China capped gains in the latter part of the period. Against this backdrop, Chinese and Hong Kong equities slid. IT focused markets with exposure to the US, including Taiwanese and South Korean stocks, gained amid optimism towards AI related memory demand. Strong economic growth in India continued to drive domestic stocks. Australian equities also delivered robust performance.

Investment Manager's Report*

Emerging markets advanced over a volatile period. Sentiment oscillated sharply as markets globally grappled with elevated inflation in the developed world, along with the timeline for interest rate cuts, geopolitical tensions and the pace of the economic recovery in China. In recent months, markets were strengthened by encouraging economic trends such as receding recessionary pressure in the US and rising commodity prices. Chinese equities led gains, supported by solid first-quarter GDP figures, resilient corporate earnings and optimism around policy support. Against this backdrop, all regions posted positive returns, led by Latin America, followed by emerging Asia and emerging Europe, the Middle East and Africa.

Earnings expecations have improved; but cautious outlook on China

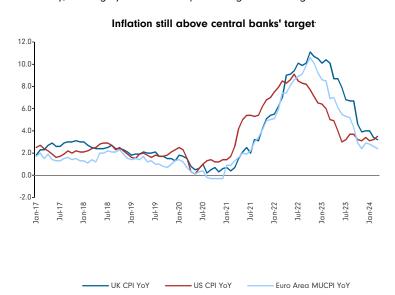

Source: IBES, LSEG DataStream, 30.04.2024. Data for MSCI Indices

Earnings for the first quarter of 2024 were better than expected, which was important given the multiple expansion we have seen in equities. We need continued earnings growth for valuations to be justified, particularly in cyclical stocks. First quarter earnings results in the US were positive, with annual earnings growth and guidance improving from weak levels. In Europe, so far, results have surprised to the upside, although from low expectations, but annual earnings have been down on a year-on-year basis. Overall, interest rates have likely peaked in most developed markets, and quality dividend stocks have historically outperformed in falling interest environments. There is also a drive towards shareholder friendly policies in Asian countries including Japan, South Korea and China, all of which are pushing companies towards increasing dividend payments. Japanese equities were also supported by the weak yen.

Bond markets

Global fixed income markets generated mixed returns. Financial turmoil appeared to settle down at the start of the period and volatility subsided. However, this was short lived as sentiment weakened due to concerns over geopolitical risks. Furthermore, resilient economic data and sticky inflation prints led investors to expect higher for longer interest rates, as a result of which sovereign bonds sold off. Towards the end of 2023, global bonds rebounded sharply on expectations that global central banks would start to cut interest rates. 2024 started on an optimistic note, but sentiment shifted towards the end of the period, as investors realised that they may have become too hopeful for an interest rate cut by the US Federal Reserve (Fed) in March. Overall, central banks kept interest rates steady at historically high levels and yields rose. In the corporate credit space, credit spreads tightened broadly, with high yield bonds outperforming investment grade bonds.

Source: Bloomberg, 30.04.2024

Investment Manager's Report*

Our base case scenario is still for a soft landing, but we have increased the probability of a no landing scenario since January 2024. The no landing narrative is set to dominate market action as "narrative wars" heat up and the US Fed changes its communication rapidly. The possibility of no landing dynamics lasting all of 2024 has become significantly skewed to the upside as a result of resilient activity data and sticky inflation, which has continued to exceed expectations. After the year end, the ECB commenced its interest rate cutting cycle in June 2024 and it is anticipated that this will be followed by the BoE later in the year. However, we now expect no rate cuts from the US Fed in 2024. In fact, there is an increasing risk of interest rate hikes if the current combination of strong economic activity and persistently high inflation continues. With rate cuts by the US Fed less likely, other central banks may have to scale back their own rate cutting plans to avoid large monetary policy divergences compared to the US.

Footnotes

- 1. These sub-funds have not been authorised by the Swiss Financial Market Supervisory Authority (FINMA) and have therefore not been approved for distribution in Switzerland.
- 2. These sub-funds with substantial Chinese exposure were closed from 30 April to 3 May 2024 due to China national holidays. During this period, these sub-funds were closed for dealing and any published non-official Net Asset Value were based on the final issued Net Asset Value prior to the closure. The Net Asset Values as at 30 April 2024 disclosed in the financial statements have been fair valued.
- 3. These sub-funds have not been notified for marketing in Germany and the shares of these sub-funds may not be marketed to investors in Germany.
- 4. These sub-funds are not authorised by the Securities & Futures Commission in Hong Kong and may not be promoted or offered to the public in Hong Kong.
- 5. These sub-funds have not been authorised by the "Finanzmarktaufsicht" (Austrian Financial Market Authority) and have therefore not been approved for distribution in Austria.
- 6. These sub-funds are authorised by the Securities and Futures Commission in Hong Kong under the Securities and Futures Commission Code on Unit Trusts and Mutual Funds and not under the Securities and Futures Commission Code on Real Estate Investment Trusts. Such authorisation does not imply official recommendation.
- 7. This sub-fund can invest in Indian equity securities through a wholly-owned Mauritian subsidiary, FIL Investments (Mauritius) Limited. As at year end the Mauritian subsidiary only held cash.
- 8. These sub-funds are defined as Article 8 sub-funds as per Sustainable Finance Disclosure Regulation ("SFDR"). SFDR refers to the regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability-related disclosures in the financial services sector. Article 8 sub-funds seek to achieve their investment objectives while promoting, among other characteristics, environmental or social characteristics, or a combination of those characteristics. Information on the environmental/social characteristics for the funds disclosing under Article 8 of SFDR, is made available in the annex to the unaudited section of the annual report.
- 9. These sub-funds are defined as Article 9 sub-funds as per SFDR. Article 9 sub-funds have sustainable investment as their objective. Information on sustainable investments for the funds disclosing under Article 9 of SFDR is made available in the annex to the unaudited section of the annual report.

Within the meaning of SFDR, the others sub-funds are defined as Article 6 and do not promote environmental and/or social characteristics nor have a sustainable investment as its objective as at year end.

Please note that not all countries of distribution have been disclosed in the above footnotes. For a complete list please refer to the prospectus.

Performance notes on Fund Reviews

Cumulative Returns are calculated from published Net Asset Value price to published Net Asset Value price with gross income reinvested on exdividend dates. For sub-funds where the price adjustment policy has been applied as per note 2 on page 680, the Cumulative Returns are calculated to or from the adjusted Net Asset Value price.

This calculation does not include any initial charge, and represents the true investment performance of the sub-fund.

The performance figures reported under the column "Since Launch" in the tables are calculated from the commencement of operations until 30 April 2024.

Annualised performance is an alternative way of expressing a sub-fund's total return. It assumes a steady compound rate of growth during the period in question and is not the sub-fund's year by year performance, which fluctuated over the periods shown.

Please note that the Manager's Overviews are based on the first Share class disclosed for each sub-fund. Performance data is expressed in the Share class currency of denomination, indicated by the ISO code shown.

America Fund 8

FUND SIZE AS AT 30.04.2024 : USD 3,134 MILLION

Manager's Overview

US equities rose over the period. Markets started on a cautious note due to concerns around the debt ceiling, which was resolved in June, when the US Senate approved the debt ceiling bill to avoid a default on federal government debt. Surging oil prices, rising bond yields and concerns over a government shutdown triggered a sell-off towards the end of the third quarter. However, markets rebounded strongly in November. Investor sentiment was bolstered by expectations for rate cuts in 2024 as central banks appeared to have reached the peak of their interest rate tightening cycles. 2024 started on a weak note as the technology-based Magnificent Seven stocks (Microsoft, Apple, Nvidia, Alphabet, Tesla, Meta Platforms and Amazon) faltered following strong performance during the fourth quarter. Nevertheless, hopes for interest rate cuts and a strong start to earnings season drove markets to record highs by the end of the first quarter of 2024. Against this backdrop, all sectors except real estate rallied, with communication services, information technology and financials rising the most.

The fund underperformed the comparative index over the period. The lack of exposure to Nvidia, Meta Platforms and Amazon were the top detractors from relative performance, as their shares rose on investor excitement around artificial intelligence (AI) and strong quarterly earnings reports. The managers' valuation focus means that the fund does not invest in these richly valued names. Shares in health care company Baxter fell sharply in the fourth quarter of 2023 on news that European pharmaceuticals firm Novo Nordisk's GLP1 diabetes medication reached efficacy for treating kidney disease. The market viewed this news as a headwind for Baxter, which produces dialysis machines for patients with kidney disease. However, while this development may lead to a delay in patients with kidney disease transitioning to dialysis machines, it is unlikely to remove the need for them. On a positive note, American transportation company XPO rose after it released consensus beating quarterly results in February, driven by better pricing and margins. The overweight position in McKesson also advanced. Pharmaceuticals retailer Rite Aid settled its lawsuit against McKesson during the fourth quarter of 2023, after filing for bankruptcy. As part of the deal, McKesson will continue to supply drugs through the end of Rite Aid's bankruptcy case, while Rite Aid will prioritise payments to McKesson. The lack of exposure to Apple added relative value. Its shares fell after the US Department of Justice filed an antitrust case against the company alleging a monopoly in the "premium smartphone market".

The managers focus on investing in good quality companies that are mispriced, either because they are out of favour or their intrinsic asset value is misunderstood, or their journey to sustainability is underappreciated. Stockpicking is at the core of their approach and is the main driver of risks and returns. The managers bought positions in insurance and reinsurance brokerage provider AON Plc and McCormick & Company, a high-quality food company specialising in spices, seasonings and flavour solutions. Positions in Cencora and Exelon were sold.

American Growth Fund 8

FUND SIZE AS AT 30.04.2024 : USD 871 MILLION

Manager's Overview

US equities rose over the period. Markets started on a cautious note due to concerns around the debt ceiling, which was resolved in June, when the US Senate approved the debt ceiling bill to avoid a default on federal government debt. Surging oil prices, rising bond yields and concerns over a government shutdown triggered a sell-off towards the end of the third quarter. However, markets rebounded strongly in November. Investor sentiment was bolstered by expectations for rate cuts in 2024 as central banks appeared to have reached the peak of their interest rate tightening cycles. 2024 started on a weak note as the technology-based Magnificent Seven stocks (Microsoft, Apple, Nvidia, Alphabet, Tesla, Meta Platforms and Amazon) faltered following strong performance during the fourth quarter. Nevertheless, hopes for interest rate cuts and a strong start to earnings season drove markets to record highs by the end of the first quarter of 2024. Against this backdrop, all sectors except real estate rallied, with communication services, information technology and financials rising the most.

The fund underperformed the comparative index over the period. The underweight allocation to Nvidia and Amazon and lack of exposure to Meta detracted from relative performance as these companies benefited from investor excitement around artificial intelligence (AI) and strong quarterly earnings reports. The holding in electronic trading platform MarketAxess
Holdings declined as it disclosed disappointing US credit volumes for January 2024, while the position in telecommunications company Charter Communications plunged after it reported worse than expected quarterly results in February 2024. Encouragingly, the underweight position in Apple was the largest contributor to relative returns. Apple revealed strong demand for iPhones in the US and Europe; however, weakness in the Chinese market disappointed investors. In March, a fine from the European Union (EU) Commission and an antitrust filing by the US Department of Justice, alleging a monopoly in the "premium smartphone market", acted as a headwind to its share price. Cloud platform provider Nutanix also added notable value, as it reported strong quarterly results in November and raised its guidance. The holding in natural and organic food retailer Sprouts Farmers Market rallied after it released its quarterly results in February, with earnings per share (EPS) coming in ahead of expectations.

During the period, the managers bought a new position in mega-cap technology company Apple. The stock has been weak on concerns about a regulatory overhang and softer iPhone sales. However, the upcoming iPhone 16 cycle is expected to benefit from a large cohort of iPhone 12/13 buyers looking to upgrade and new Al software features. The managers initiated a position in GPU manufacturer Nvidia. It is the go-to supplier for processing chips to enable generative Al. The company enjoys competitive moats around not just chips but also its software and ecosystem, with pricing power in a structurally inflecting market. Positions in Horizon Therapeutics and Johnson & Johnson were sold.

ASEAN Fund 8

FUND SIZE AS AT 30.04.2024 : USD 874 MILLION

Manager's Overview

Equities in the Association of Southeast Asian Nations (ASEAN) declined during the period. Global investor interest was focused on the resilient macroeconomic data from the US, which diverted interest towards technology-heavy markets in the broader Asian region. ASEAN equities were largely weighed down by declines in Indonesia and Thailand. A weakening domestic currency relative to the US dollar, lower-than-expected quarterly GDP growth and uncertainty surrounding the new government formation earlier in the period weighed on Thai markets. Consequently, Thai markets were one of the most oversold in the region during 2023. Meanwhile, Singapore equities ended the period in positive territory, broadly in line with global and regional markets. Malaysian equities also rose amid the uptrend in oil prices and enthusiasm towards supply chains focused on technology and electronics manufacturing services sectors.

The fund outperformed the comparative index over the period. Security selection in Indonesia and the Philippines added notable value. The strength of portfolio construction was evident during the year under review as relative returns were driven by avoiding expensive stocks that were not supported by fundamentals. The portfolio does not have a position in GoTo Gojek Tokopedia and maintains an underweight stance in Telkom Indonesia. GoTo's disappointing profitability kept investors at bay. In financials, positions in leading ASEAN banks including Bank Mandiri and Metropolitan Bank and Trust gained following their impressive earnings growth during the period. Conversely, positions in Thailand-based Home Product Center and CP All fell in line with the domestic market amid investors' move away from Thai markets during the period. Investors also rotated away from SEA during the period. Despite the company's efforts to fend off competitors and boost its market share, increased e-commerce investments led to losses, causing a significant drop in its share price.

The manager holds businesses that are enduring franchises with sustainable competitive advantages, have a reasonable runway of future growth, attractive valuations with a good risk/reward profile, solid balance sheets and superior capital management ability. Among financials, the manager has a strong preference for regional banks including DBS Group and Metropolitan Bank and Trust. The fund also has conviction positions in health care names including Bumrungrad Hospital, which is a high-quality hospital catering to the premium high-end segment in Thailand. Indofood is preferred for its sustainable market leadership position, with high barriers to entry and consumer stickiness.

Asia Pacific Opportunities Fund

FUND SIZE AS AT 30.04.2024 : USD 1,845 MILLION

Manager's Overview

Asia Pacific ex Japan equities ended the period higher. Information technology (IT) focused markets, including Taiwanese and South Korean stocks, advanced amid optimism towards artificial intelligence (AI) related memory demand. Strong economic growth in India continued to drive domestic stocks. However, subdued macroeconomic data releases and renewed stress on the financials and real estate sectors in China capped gains. Chinese and Hong Kong equities slid.

The fund lagged the comparative index over the year. Security selection in the materials, consumer discretionary and financials sectors detracted from relative returns. China's building material companies were negatively impacted by subdued downstream demand due to a weak property market, a deceleration in growth in the sector and a reduction in the growth outlook by leading players. Positions in SKSHU Paint and Beijing Oriental Yuhong detracted from relative returns. Skshu Paint was sold and the allocation to Beijing Oriental Yuhong was reduced for better opportunities elsewhere. The holding in gold royalty company Franco-Nevada slid. Its shares were negatively impacted by regulatory headwinds with Panama's government on the operations of the Cobre Panama mine. Franco-Nevada owns a royalty on the copper produced from the mine, and uncertainty over the continuity of mining operations weighed on investor sentiment. On a positive note, expectations of a pause in rate hikes by the US Federal Reserve supported selected positions. The exposure to James Hardie Industries and Techtronic Industries contributed to returns. Both companies have a strong correlation with the US housing market, which is driven by interest rates. Indications that the interest rate cycle in the US may be peaking buoyed their share prices.

The manager focuses on bottom-up stock selection and favours companies that have an understandable business model, an above-average earnings growth rate relative to market expectations and the ability to allocate capital effectively to increase returns on equity over time. The manager also likes companies that trade at attractive valuations. The allocation to private lender HDFC Bank was retained. It has a strong balance sheet and the best asset quality among Indian banks. The manager retains high conviction in Focus Media Information Technology. The company's investment thesis remains intact, supported by a strong order book, better cost controls and higher margins.

Asian Smaller Companies Fund 8

FUND SIZE AS AT 30.04.2024 : USD 1,337 MILLION

Manager's Overview

Small-cap equities in the Asia Pacific ex Japan region advanced over the period, led by gains in South Korea, Taiwan and India. The period started on a positive note amid expectations of policy support from China. However, subdued consumption recovery and renewed stress on the financials and real estate sectors in China capped gains in the latter part of the period. Against this backdrop, Chinese and Hong Kong equities slid. However, technology focused markets with exposure to the US, including Taiwanese and South Korean stocks, gained amid optimism towards artificial intelligence (AI) related memory demand. Strong economic growth in India continued to drive domestic stocks. We continue to focus on fundamental analysis and believe that investing in good businesses run by competent and honest management teams at attractive prices is the most time-tested way to make money in the stock market.

The fund underperformed the comparative index over the period. Some of the leading detractors were Chinese consumer-related companies (China Yongda Auto Services, Zhongsheng Group and Galaxy Entertainment) and real estate firm China Overseas Grand Oceans Group, which fell due to weak demand and negative investor sentiment. Indonesia's largest ceramic tiles maker Arwana Citramulia also slid on weak demand due to project delays ahead of elections. The manager believes these are temporary losses and continues to own these businesses for their longer-term growth prospects and attractive valuations. On the other hand, holdings in India (PTC India, Granules India, LIC Housing Finance and Shriram Finance) contributed the most to performance. The manager continues to like these stocks as they still offer a sufficient margin of safety, except PTC India and Granules India, where the manager trimmed the exposure on strong performance and reduced margin of safety.

The manager looks for companies with strong competitive advantages and good management teams. The focus is on discovering undervalued stocks, leading to a significant share of funds being invested in small and mid-cap companies. The fund avoids unproven business models, highly geared companies, cyclical businesses on peak margins and stocks trading on high earnings or cash flow multiples. There were no major changes to the fund's overall positioning at the country and sector level, except for adjustments driven by stock-specific opportunities.

Asian Special Situations Fund 8

FUND SIZE AS AT 30.04.2024 : USD 1,983 MILLION

Manager's Overview

Equities in the Asia ex Japan region advanced over the period, led by gains in South Korea, Taiwan and India. The period started on a positive note amid expectations of policy support from China. However, subdued macroeconomic data releases and renewed stress on the financials and real estate sectors in China capped gains in the latter part of the period. Against this backdrop, Chinese and Hong Kong equities slid. However, technology focused markets with exposure to the US, including Taiwanese and South Korean stocks, gained amid optimism towards artificial intelligence (AI) related memory demand. Strong economic growth in India continued to drive domestic stocks. India remained the most favoured spot for equity investing during 2023 and was the most bought market in the Asia ex Japan region.

The fund underperformed the comparative index over the period. Selected Chinese consumption holdings held back gains. These included strong consumer franchises such as Li Ning, Galaxy Entertainment, Meituan and China Mengniu Diary. Meanwhile, the conviction holding in AIA Group remained at the receiving end of investor disdain towards China. As a widely held blue-chip stock, global investors rotated out of AIA even as its value of new business continued to improve. On a positive note, confidence towards advanced semiconductor stocks was strengthened by news flows around developments in Al and new fifth-generation (5G) smartphone launches. Conviction holdings in Taiwan Semiconductor Manufacturing Company, ASMPT, MediaTek and SK Hynix contributed to performance. In financials, conviction holdings in leading Indian lenders, including Axis Bank, ICICI Bank and Shriram Finance added value.

The portfolio has an emphasis on high-quality companies that are supported by strong management teams, have built strong franchises, and are well positioned to both drive and benefit from structural growth prospects in the region. Among financials, the manager has strong conviction in HDFC Bank, AIA Group and Axis Bank. Samsung Electronics, a global leader in memory chips, handsets, display panels and consumer electronics products, is another conviction holding in the portfolio. Taiwan Semiconductor Manufacturing Company, the largest absolute position in the fund, is retained as it remains a front-runner with cutting edge technology.

Australian Diversified Equity Fund

FUND SIZE AS AT 30.04.2024 : AUD 558 MILLION

Manager's Overview

Australian equities gained over the review period. Optimism led by artificial intelligence related demand and positive corporate results in the domestic market provided support in the first half of the period. The latter half of the period was driven by a better-than-expected domestic earnings season and robust global economic indicators.

The fund underperformed the comparative index over the review period. Selected holdings held back gains. Clean energy miner IGO was a key detractor from returns. Investors were concerned about the debt and capital expenditure burden at its Tianqi Lithium Energy Australia joint venture. IGO's interest in the lowest cost lithium hard rock mine Greenbushes, which is a geological outlier due to its high grade, quality and mine life, is well positioned to weather the volatile cycles of a maturing commodity market. Private hospital operator Ramsay Health Care's management's tone shifted noticeably from margin normalisation to uncertainty around margin growth into 2024. Nevertheless, Ramsay has market leading positions in Australia and France, which gives it leverage during negotiations with private health insurers and when developing solutions for governments. On a positive note, insurance major Suncorp Group gained as it reported improved earnings and profits in its half-yearly results. Its share price was boosted as the Australian Competition Tribunal greenlighted the proposed sale of its banking division, Suncorp Bank, to ANZ Group Holdings.

The manager remains mindful of company fundamentals and assess opportunities across the capital structure. The strategy favours high-quality companies with superior management teams, a sustainable competitive edge, strong free cash flow generation and robust earnings growth. The fund has a high-conviction position in Suncorp Group, which focuses on business improvement initiatives. Its core insurance business has a market leading position in Australia and strong fundamentals, including encouraging premium growth and reduction of capital.

China Consumer Fund 8

FUND SIZE AS AT 30.04.2024 : USD 3,001 MILLION

Manager's Overview

Chinese equities fell over the period due to multiple factors, including tepid demand, a weak property market, geopolitical tensions and supply chain shifts. Foreign investment fell in 2023 despite authorities' efforts to restore confidence in the economy. Encouragingly, policymakers vowed to enhance economic support through the introduction of several measures. Overall, China's GDP reached 5.2% in 2023, meeting its official annual target.

The fund underperformed the comparative index over the period, mainly due to an underweight stance in financials, while security selection in the health care sector added value. AIA Group's shares underperformed over the past year due to rising geopolitical tensions and negative consensus earnings revisions, which triggered a sell-off in its shares. Investor sentiment remained cautious amid a lacklustre recovery in consumer spending and confidence. Hence, holdings in China Tourism Duty Free and Li Ning weighed on returns. The position in China Mengniu Dairy held back gains as the overall dairy market was weaker than expected. Meanwhile, the overweight exposure to PDD Holdings added value. Temu was the major driver of revenue growth as it received a significant boost from its growing popularity. The US Committee advanced a bill in 2024 to prevent Chinese biotechnology companies from accessing federal contracts in the interest of US national security. Therefore, the lack of exposure WuXi Biologics supported relative performance. Hansoh announced an exclusive license agreement for an antibody-drug conjugate with British pharmaceutical company GSK in the second half of 2023. This has been one of the first meaningful out-license deals from a Chinese pharmaceuticals company.

The exposure to consumption names was weighed down by investor sentiment more so than disappointing earnings. Despite recent weakness in consumption, there is still scope for recovery. More importantly, businesses that are exposed to structural themes such as local brands and bipolarisation trends are likely to offer better growth and higher return opportunities. Kweichow Moutai, PDD Holdings, Anta Sports Products and Shenzhou International are some of the preferred holdings in the portfolio.

China Focus Fund 8

FUND SIZE AS AT 30.04.2024 : USD 2,953 MILLION

Manager's Overview

Chinese equities fell over the 12 months ended April 2024. The period started on a positive note amid expectations for a strong economic recovery and policy support from China. However, subdued macroeconomic data, weak consumer demand and renewed stress on the financials and real estate sectors capped gains in the latter part of the period. Growing political dissonance between China and the US also weighed on sentiment. Investors remained concerned about China's growth prospects amid underwhelming fiscal stimulus. As a result, Chinese equities slid during the period.

The fund underperformed the comparative index over the period. Concerns over a lacklustre recovery in consumer spending weighed on some high conviction consumption holdings. These included automobile dealers China Yongda Auto Services and Zhongsheng Group. Shares in both companies were weighed down by weaker demand for luxury cars in China and lower new car margins due to significant price discounts. Meanwhile, Shandong Weigao fell amid subdued earnings and revenue in its latest financial results for its fiscal year 2023. The volume-based procurement policy in China led to a reduction in the average selling price (ASP) per unit. Galaxy Entertainment also detracted from performance following a tactical downgrade by multiple leading brokerages towards the latter part of the period. On a positive note, Sinotruk Hong Kong contributed to returns. Its shares advanced on strong earnings growth resulting from solid demand growth in the heavy-duty truck industry during the period. China Honggiao Group also advanced as it reported massive earnings beat earlier in 2024, driven by strong sales volume and higher dividend growth. Pork processing company WH Group was the leading contributor to returns. Its management's efforts to restructure its business operations in the US, with a focus on improving profitability, can potentially unlock shareholder value.

The manager continues to focus on bottom-up stock selection with a valuefocused approach since he took over the management of the fund effective 30 September 2022. More broadly, he is keen to seek good businesses run by competent and honest management teams, that earn good return on capital and are available at attractive valuations with enough margin of safety. Overall, the manager believes that the quality of businesses and valuations will bring in consistent returns over time.

China Innovation Fund 8

FUND SIZE AS AT 30.04.2024 : USD 124 MILLION

Manager's Overview

Chinese equities fell over the period due to concerns over an uneven postpandemic recovery. Authorities issued a series of stimulus measures to shore up the economy. The People's Bank of China adopted an accommodative stance. Major cities relaxed home purchase curbs to revive the property market. The China Securities Regulatory Commission introduced stricter rules to guide the long-term healthy development of the capital market. Encouragingly, data released earlier in 2024 suggested an improvement in China's economic recovery. The government's unwavering commitment to achieving high-quality and sustainable growth, coupled with the undervaluation of Chinese stocks, presents compelling investment opportunities.

The fund outperformed the comparative index over the period, mainly due to stock selection in the information technology (IT), consumer discretionary and industrials sectors. Chipmakers Taiwan Semiconductor Manufacturing Company and SK Hynix benefited from a cyclical recovery and an emerging trend of artificial intelligence innovation. Discount e-commerce retailer PDD Holdings reported strong performance on both domestic and overseas platforms. Conversely, construction software maker Glodon faced near-term headwinds, including negative operating leverage, a lack of recovery in new project initiatives and downward pressure in the downstream construction industry.

The managers take a thematic approach to fundamental, bottom-up investment, and look for innovative firms focused on growth and quality at a reasonable price. Seeking to capitalise on the acceleration of innovation in China, they apply a deep understanding of the technological, lifestyle and environmental innovations that are reshaping the world to identify underappreciated growth opportunities. Environmental, social and governance (ESG) considerations are integrated in the investment process. As a result, the fund is overweight in the IT and communication services sectors.

Emerging Asia Fund 8

FUND SIZE AS AT 30.04.2024 : USD 459 MILLION

Manager's Overview

Equities in emerging Asia advanced over the period, led by gains in South Korea, Taiwan and India. The period started on a positive note amid expectations of policy support from China. However, subdued macroeconomic data releases and renewed stress on the financials and real estate sectors in China capped gains in the latter part of the period. Against this backdrop, Chinese equities slid. However, technology focused markets with exposure to the US, including Taiwanese and South Korean stocks, gained amid optimism towards artificial intelligence (AI) related memory demand. Strong economic growth in India continued to drive domestic stocks. India remained the most favoured spot for equity investing during 2023 and was the most bought market in the Asian region.

The fund underperformed the comparative index over the year. Selected Chinese consumption holdings held back gains. These included strong consumer franchises such as Li Ning, Galaxy Entertainment, China Yongda Auto Services and Yum China. Investor sentiment remains cautious amid lacklustre consumer spending and a subdued economic recovery in China. Meanwhile, concerns around a structural shift in the Chinese real estate market and grim property sales dampened market sentiment and overall investor confidence towards real estate names. This weighed on holdings in China Overseas Land & Investment and China Overseas Grand Oceans Group. On a positive note, confidence towards advanced semiconductor stocks was strengthened by news flows around developments in Al and new fifth generation (5G) smartphone launches. Conviction holdings in SK Hynix and KoMiCo contributed to performance. Elsewhere in India, conviction holdings in leading Indian lenders, including Axis Bank and Shriram Finance, as well as smart meter manufacturer Genus Power Infrastructure added notable value.

The manager favours businesses that are enduring franchises with sustainable competitive advantages, have a reasonable runway of future growth, attractive valuations with a good risk/reward profile, solid balance sheets and superior capital management ability. Within the consumption space, the manager has strong conviction in China Meidong Auto and WH Group. China Meidong is a fast-growing automobile dealer with exposure to world class brands such as Porsche and BMW. WH Group is one of the largest pork processing companies with most of its operations in China, the US and Europe. In financials, the manager has a positive view on Axis Bank and ICICI Bank.

Emerging Europe, Middle East and Africa Fund

FUND SIZE AS AT 30.04.2024 : USD 247 MILLION

Manager's Overview

Equities in the emerging Europe, Middle East and Africa region posted positive returns during the reporting period. Equities in the region experienced distinct volatility, driven largely by global cues. Sentiment oscillated sharply as global markets grappled with elevated inflation in the developed world, along with the timeline for interest rate cuts, geopolitical tensions and the pace of the economic recovery in China. In recent months, markets were strengthened by encouraging economic trends such as receding recessionary pressure in the US and rising commodity prices. Turkey, Poland and Hungary were the best performing markets. Turkey outperformed due to strong foreign inflows, while Polish stocks rallied following the European Union (EU)-funding and marketfriendly election outcome. From a sector perspective, information technology stood out as the top-performing sector, while communication services and materials lagged.

The fund outperformed the comparative index over the period. At the country level, strong security selection in Kazakhstan and Greece contributed to returns. At the sector level, robust stock picking in financials added value. Here, Kaspi and Piraeus Financial enhanced gains. Conversely, weak stocking picking in industrials detracted from returns. For instance, low-budget carrier Wizz Air and capital goods company Barloworld weighed on performance.

The managers follow a bottom-up stock picking approach, as a result of which the fund's country and sector positioning reflects the number of attractive investment opportunities available. They are cautiously positioned in commodities (iron ore, steel, copper names). The fund has exposure to First Quantum Minerals, Jubilee Metals, Endeavour Mining and Alphamin Resources. Within financials, the managers like the prospects of Polish banks Powszechna Kasa Oszcz and Bank Polska Kasa Opieki that are trading at attractive valuations. They retain an optimistic view on the Greek banking market, where they hold National Bank of Greece and Piraeus Financial.

Emerging Markets Fund 8

FUND SIZE AS AT 30.04.2024 : USD 3,254 MILLION

Manager's Overview

Emerging markets advanced over a period marked by distinct volatility. Sentiment oscillated sharply as markets globally grappled with elevated inflation in the developed world along with the timeline for interest rate cuts, geopolitical tensions and the pace of the economic recovery in China. In recent months, markets were strengthened by encouraging economic trends such as receding recessionary pressure in the US and rising commodity prices. Chinese equities led gains, supported by solid first-quarter GDP figures, resilient corporate earnings and optimism around policy support. Against this backdrop, all regions posted positive returns, led by Latin America, followed by emerging Asia and emerging Europe, the Middle East and Africa (EMEA).

The fund delivered positive returns during the period but underperformed the comparative index over the period. Stock picking across South Korea, Taiwan and Kazakhstan enhanced gains, while China and Hong Kong were a drag on performance. Among sectors, stock picking in information technology and financials were the key drivers of returns. This was offset by the weak performance of the consumer staples, energy and consumer discretionary sectors. Chinese consumer holdings, including Li Ning (sportswear), Zhongsheng (automobiles) and China Mengniu (dairy) remained subdued amid a weaker consumer environment. Indian online travel business MakeMyTrip continued to benefit from high cash flows, low competitive intensity and stabilising fixed costs, which should support higher margins. Russia's TCS Group, a provider of online retail financial services, which was fully sold in January, also contributed to performance.

Global interest rate policies and weakness in China primarily determined sentiment towards emerging markets. Although emerging markets continued to underperform developed markets, the asset class is trading at a deep discount to developed markets. This backdrop for inflation and interest rates is central to what we believe is an improving outlook for emerging market equities. The focus remains on owning well capitalised businesses with under-levered balance sheets. The fund is conservatively positioned, meaning that the companies owned should be better prepared for what will remain a challenging environment.

Euro 50 Index Fund

FUND SIZE AS AT 30.04.2024 : EUR 534 MILLION

Manager's Overview

European equities rallied over the period, though there was some volatility along the way. Sentiment remained fragile amid elevated interest rates and geopolitical tensions. However, markets bounced back strongly towards the end of 2023 amid cooling inflation. The start of 2024 saw European equities supported by resilient economic and corporate data, as well as a number of dovish cues from major central banks. In April, markets responded negatively to speculation that central banks will not ease their monetary policies as quickly as previously hoped, given resilient growth and sticky inflation data. While the European Central Bank (ECB) maintained interest rates at record-high levels during its April meeting, officials indicated that a looser monetary policy would be appropriate if inflation continues to converge towards its 2% target. ECB President Christine Lagarde emphasised that the bank's future moves will be data-dependent rather than following a predetermined rate trajectory.

As a "passive" or "index tracker" fund, the fund is managed to provide returns that are as close as possible to that of the index, which is a concentrated index of the 50 largest companies in the eurozone. However, the fund incurs costs and expenses that the index does not incur, although it can benefit from securities lending when the index cannot. This means fund returns should be similar to the index, rather than identical. Over the period, the primary A-EUR class of the fund returned 16.8% in net euro terms, outperforming the index, which returned 15.9%. Taxation was a positive source of tracking difference, where the fund's withholding tax treatment is more favourable versus the net total return index. Over the period, the same class' ex-post tracking error averaged 0.41% (a 3year annualised figure, based on 36 month-end data points, is used as it is regarded as more statistically valid). This measure of the variability of fund returns around the index can be influenced by a number of factors, including the aforementioned withholding tax differences, and the fund's partial swing pricing policy, which is designed to manage tracking difference as tightly as possible over time.

Geode Capital Management LLC, a leading specialist in the management of index tracking strategies, was appointed as the sub-investment manager to the fund on 3 January 2017. The managers endeavour to minimise deviation from the index by using an index tracking technique, which comprises full replication of the companies represented in the index. Please note, the fund's cash position, and investment of cash into a liquidity fund for diversification, does not mean that the fund is under exposed to the index, as such positions are typically equitised with equity index futures contracts. This helps to efficiently manage cashflows in the fund at reduced costs. When taking into account exposure achieved by these futures contracts, the fund's holdings weights more closely match the index.

European Dynamic Growth Fund 8

FUND SIZE AS AT 30.04.2024 : EUR 2,784 MILLION

Manager's Overview

European equities rose over the review period, but there was some volatility along the way. Sentiment remained fragile amid elevated interest rates and geopolitical tensions. However, markets bounced back strongly towards the end of 2023 amid cooling inflation. The start of 2024 saw European equities supported by resilient economic and corporate data as well as a number of dovish cues from major central banks. In April, markets responded negatively to speculation that central banks will not ease their monetary policies as quickly as previously hoped, given resilient growth and sticky inflation data. While the European Central Bank (ECB) maintained interest rates at record-high levels during its April meeting, officials indicated that a looser monetary policy would be appropriate if inflation continues to converge towards its 2% target. ECB President Christine Lagarde emphasised that the bank's future moves will be data-dependent rather than following a predetermined rate trajectory.

The fund delivered positive returns but underperformed the index over the period. Stock picking was a headwind, with disappointments in financials, consumer discretionary and information technology (IT) offsetting contributions from health care stocks. Conversely, the underweight positioning in consumer staples and overweight exposure to IT proved to be a good source of relative value. At a stock level, French payments business Worldline disappointed investors after it lowered its revenue growth target for 2024, while luxury business Burberry lowered its FY 2024 earnings guidance. Positively, Novo Nordisk had a very strong year, fuelled by the robust performance of its GLP-1 diabetes products, with the company forecasting another year of double-digit growth.

The managers are focussed on the fortunes of individual companies rather than trying to predict the macroeconomic outcome. They look for companies that are supported by wider structural shifts, have strong balance sheets, exposure to recurring revenues and good earnings stability. At a sector level, the fund is overweight in stock picking sectors with company-specific drivers such as IT, industrials and health care, and has a lack of exposure to macroeconomically sensitive sectors such as banks and energy.

European Growth Fund 8

FUND SIZE AS AT 30.04.2024 : EUR 6,632 MILLION

Manager's Overview

European equities rallied over the period, though there was some volatility along the way. Sentiment remained fragile amid elevated interest rates and geopolitical tensions. However, markets bounced back strongly towards the end of 2023 amid cooling inflation. The start of 2024 saw European equities supported by resilient economic and corporate data, as well as a number of dovish cues from major central banks. In April, markets responded negatively to speculation that central banks will not ease their monetary policies as quickly as previously hoped, given resilient growth and sticky inflation data. While the European Central Bank (ECB) maintained interest rates at record-high levels during its April meeting, officials indicated that a looser monetary policy would be appropriate if inflation continues to converge towards its 2% target. ECB President Christine Lagarde emphasised that the bank's future moves will be data-dependent rather than following a predetermined rate trajectory.

The fund generated positive returns but underperformed the index over the period, with sector and style headwinds proving to be a drag on relative returns. Weak stock selection in the financials and health care sectors hampered performance. Reckitt Benckiser was a notable detractor from returns. Its shares declined after a jury in Illinois ordered the company to pay US\$60 million in damages, saying that its Enfamil baby formula led to the death of a premature baby. The lack of exposure to Novo Nordisk detracted significantly from relative returns as it reported better-than-expected fourth quarter operating profits. On a positive note, the exposure to Associated British Foods (AB Foods) and Inditex added notable value. AB Foods reported strong results for the first half of its fiscal year 2024, with earnings before interest and tax (EBIT) and earnings per share (EPS) above consensus estimates. Inditex rose on the announcement of very strong current trading alongside its FY 2023 results released in March.

The team prefers quality companies that are trading on attractive valuations and the fund typically does well when the valuation gap between the most and least expensive stocks narrows, given that it tends not to own the priciest companies in the market. The team is focussed on finding stocks on low/depressed multiples where fundamentals are solid (not over inflated) and can see decent (rather than stellar) EPS growth over the medium term.

European Smaller Companies Fund

FUND SIZE AS AT 30.04.2024 : EUR 1,069 MILLION

Manager's Overview

European smaller companies rallied over the period, though there was some volatility along the way. Sentiment remained fragile amid elevated interest rates and geopolitical tensions. However, markets bounced back strongly towards the end of 2023 amid cooling inflation. The start of 2024 saw European equities supported by resilient economic and corporate data, as well as a number of dovish cues from major central banks. In April, markets responded negatively to speculation that central banks will not ease their monetary policies as quickly as previously hoped, given resilient growth and sticky inflation data. While the European Central Bank (ECB) maintained interest rates at record-high levels during its April meeting, officials indicated that a looser monetary policy would be appropriate if inflation continues to converge towards its 2% target. ECB President Christine Lagarde emphasised that the bank's future moves will be data-dependent rather than following a predetermined rate trajectory.

The fund delivered positive returns but underperformed the index over the review period. Security selection across several sectors was a major drag on relative returns. Some of these losses were offset by the underweight positioning in health care and real estate, as well as the overweight exposure to communication services and financials. Shares in AMS-Osram derated after Apple cancelled its anchor project supporting AMS-Osram's significant microLED investment, which removes a key long-term growth driver for the business. Shares in Teleperformance were hurt by increased concerns about how artificial intelligence will disrupt the customer relationship services industry. Conversely, Vitesco Technologies performed strongly after it received a takeover offer from German automotive supplier Schaeffler. Financials stocks Intermediate Capital Group and VZ Holding also added notable value.

The managers are focused on identifying well-managed, cash generative companies that have clear market leadership, a sustainable competitive advantage, and profits driven by strong sales growth. The fund has meaningful overweight positions in the communication services, materials and financials sectors, while it has a notable underweight stance in industrials, real estate and

FIRST All Country World Fund 8

FUND SIZE AS AT 30.04.2024 : USD 276 MILLION

Manager's Overview

Global equities rose over the period. Performance was muted in the first half of the period as inflation moderated but remained above target levels and led major central banks to continue to raise interest rates. Concerns around the debt ceiling and a rating downgrade for government debt in the US, along with geopolitical tensions also weighed on sentiment. Nevertheless, equities rallied strongly in the latter half as central banks in major developed markets left policy rates unchanged. Furthermore, robust corporate earnings, resilient economic data and moderating inflationary pressure raised hopes for a soft landing and interest rate cuts in 2024. Against this backdrop, equities in the US and Japan gained the most, while China lagged. At a sector level, semiconductor stocks within the information technology sector rose strongly as the artificial intelligence (AI) theme boosted investor sentiment.

The fund underperformed the comparative index over the year. Selected positions in the professional services and pharmaceuticals sectors were among the key detractors from performance, while strong stock selection in technology hardware and selected semiconductor equipment stocks added value. At a stock level, the holding in business services company Concentrix fell amid concerns that Chat GPT/large language models pose a competitive technology disruption risk. Encouragingly, technology hardware company Dell Technologies advanced on the back of strong earnings and increasing Al server orders. Dell is expected to continue to generate considerable free cash flow and engage shareholders via its dividends and buybacks. The position in semiconductor equipment supplier Applied Materials added value as the industry is benefiting from a surge in demand from the Al space, which calls for a higher amount of computing power and memory.

The managers continue to focus on the highest conviction and most relevant ideas generated by Fidelity's global analyst base. By mitigating unintended risks, they ensure that stock selection is the key driver of risks and returns. Portfolio positioning is therefore a result of their bottom-up stock selection

Germany Fund 8

FUND SIZE AS AT 30.04.2024 : EUR 624 MILLION

Manager's Overview

German equities rallied over the period, though there was some volatility along the way. Sentiment remained fragile amid elevated interest rates and geopolitical tensions. However, markets bounced back strongly towards the end of 2023 amid cooling inflation. The start of 2024 saw equities supported by resilient economic and corporate data, as well as a number of dovish cues from major central banks. In April, markets responded negatively to speculation that central banks will not ease their monetary policies as quickly as previously hoped, given resilient growth and sticky inflation data. While the European Central Bank (ECB) maintained interest rates at record-high levels during its April meeting, officials indicated that a looser monetary policy would be appropriate if inflation continues to converge towards its 2% target.

The fund delivered positive returns during the period, but underperformed the comparative index. The relatively defensive positioning, which the portfolio managers saw as justified in light of significant economic uncertainty, proved to be too conservative, in retrospect. The lack of exposure to Bayer was a key contributor to relative returns due to its rapidly deteriorating fundamentals, continued litigation concerns and related cash outflows, and a weak balance sheet, all of which weighed on the stock. Meanwhile, several high-quality companies contributed strongly to performance, notably Partners Group, a listed private equity fund provider, and budget airliner Ryanair. Conversely, Puma and Sartorius Stedim, as well as a number of industrials holdings detracted from relative returns. Siemens Energy was notably weak, as the company announced in late June that a technical review had revealed major quality issues with some of its onshore wind platforms, and it was facing challenges in ramping up its offshore wind business.

The range of economic outcomes appears to be narrowing, with less likelihood of a major recession. Wage growth is a positive, while ECB rate cuts are getting closer. Overall, the managers continue to manage the portfolio in a conservative manner, with a focus on high-quality businesses that can sustainably grow earnings for many years to come. Conversely, they avoid businesses with structural problems or those facing a significant increase in competitive pressures, such as automobile manufacturers.

Global Financial Services Fund 8

FUND SIZE AS AT 30.04.2024 : EUR 1,166 MILLION

Manager's Overview

Global financial markets advanced in line with global equities over the period, supported by resilient economic and corporate data, as well as a number of dovish cues from major central banks. The wider markets benefited from robust corporate earnings, especially from mega-cap players, and ongoing enthusiasm surrounding artificial intelligence.

The fund generated strong returns but marginally underperformed the comparative index over the period. At an industry level, selected insurance holdings hurt returns, while security selection in capital markets added value. Shares in independent life insurance company AIA Group came under pressure due to a decline in its margins and slower growth in mainland China. The holding in Swiss wealth management company Julius Baer Gruppe slid over concerns related to weak revenue trends. Chailease Holdings fell on weak credit cycle and interest rate headwinds. On a positive note, the holding in alternative asset manager Ares Management rallied on the back of upbeat quarterly results and a strong fundraising outlook. Significant value was also realised from the sale of the position in Russia's TCS Group, a provider of online retail financial services.

The fund remains well diversified and continues to invest in long-term winners, quality franchises with robust return potential and strong bottom-up drivers. The exposure consists of balance sheet financials (banks, consumer finance, and insurers) and diversified financials (exchanges, asset managers, payments businesses and data/analytics providers). At an industry level, the fund has an overweight exposure to the capital markets and financial services subsectors, and significant allocation to high quality insurance companies. Capital market franchises continue to benefit during periods of volatility and high interest rates, given their strong capital standing and share buyback potential. Insurance majors are currently locking in medium-term benefits from higher rates and can grow in any macroeconomic condition.

Global Focus Fund 8

FUND SIZE AS AT 30.04.2024 : USD 853 MILLION

Manager's Overview

Global equities rose over the 12-month period to April 2024. Equity markets delivered muted performance over the first half of the period as inflation moderated but remained above target levels and led major central banks to continue to raise interest rates. Concerns around the debt ceiling and a rating downgrade for government debt in the US, along with geopolitical tensions in the Middle East, also weighed on sentiment. Nevertheless, equities rallied strongly in the latter half of the period as central banks in major developed markets left policy rates unchanged. Furthermore, robust corporate earnings, resilient economic data and moderating inflationary pressure raised hopes for a soft landing and supported prospects for interest rate cuts in 2024.

The fund delivered positive returns but underperformed the comparative index over the period. Certain holdings in the financials sector came under pressure, while stock picking in health care and consumer discretionary proved rewarding. At a stock level, the lack of exposure to expensively valued semiconductor company NVIDIA weighed on relative returns. Meanwhile, the holding in HDFC Bank underachieved on margin improvements due to tight liquidity in the system and the bank's focus on costs. This led to weaker than expected growth in low-cost current account, savings account (CASA) deposits due to slower than anticipated branch rollout. Conversely, General Electric was a key contributor to returns on the back of strong demand for aftermarket services as jet delivery delays continue from the pandemic and newer Boeing aircrafts face troubles. The holding in social media platform Meta was also strong, driven by a combination of robust results and euphoria around the potential of generative artificial intelligence (GenAI) to drive engagement, monetisation, advertising optimisation and efficiency.

The fund invests in two categories of stocks, i.e. compounders and transformers. Holdings in the compounders category typically have defensive characteristics, enjoy some pricing power and/or secular growth opportunities. Transformers are businesses that are either witnessing high cyclical growth or are special situations. At a sector level, the fund maintains a significant overweight in high quality businesses within the financials segment, which stand to benefit from interest rate hikes, a strengthening regulatory backdrop, secular growth drivers and the potential for market penetration, especially in emerging markets.

Global Industrials Fund

FUND SIZE AS AT 30.04.2024 : EUR 580 MILLION

Manager's Overview

Global cyclical sectors advanced in line with global equities over the review period. Equity markets delivered muted performance in the first half of the period as inflation moderated but remained above target levels and led major central banks to continue to raise interest rates. However, markets rallied strongly in the latter half of the period as central banks in major developed markets left policy rates unchanged. Furthermore, robust corporate earnings, resilient economic data and moderating inflationary pressure raised hopes for a soft landing. Against this global backdrop, equities in the US and Japan gained the most. The S&P Global US manufacturing Purchasing Managers' Index (PMI) fell to 50.0 in April, lower than the reading of 51.9 in March and below expectations of 52.0. Manufacturers scaled back purchasing activity given a fresh decline in new orders.

The fund generated strong positive returns and outperformed the comparative index over the review period. Robust security selection in the aerospace and ground transportation segments buoyed returns, while the exposure to the machinery segment held back gains. At a stock level, Rolls Royce contributed to performance as its profits more than doubled in 2023 and it forecasted further growth in 2024, extending a powerful rally in its share price over the past year.

XPO reported fourth quarter results that beat consensus estimates and issued guidance for high-single-digit yield growth in 2024 following major service improvements. General Electric rose on the back of strong demand amid ongoing geopolitical issues globally. In contrast, Nabtesco Corp fell after it posted lower-than-expected guidance for 2024 due to weakness in its component solution segment. Teleperformance forecasted limited growth in the year ahead, after it missed its full-year revenue target for 2023 due to a volatile economic environment.

The manager continues to follow a consistent approach to sector allocation (i.e. industrials & chemicals, metals & mining and energy), which is broadly in line with the market-cap weighted benchmark. The fund continues to provide exposure to good quality businesses with sustainable or strengthening competitive advantages that trade at reasonable valuations. These are businesses that are undergoing a change in terms of company or industry structure, where the stock is underappreciated by the market and is trading below its intrinsic value, resulting in an asymmetric risk/reward profile. Through its bottom-up approach, the fund continues to provide exposure to key long-term mega themes in automation, reshoring, decarbonisation & electrification, clean energy, digitisation, the reopening of the economy and global middle-class travel.

Global Low Volatility Equity Fund ⁴

FUND SIZE AS AT 30.04.2024 : USD 34 MILLION

Manager's Overview

Global equities rose over the 12-month period to April 2024. Equity markets delivered muted performance over the first half as inflation moderated but remained above target levels and led major central banks to continue to raise interest rates. Concerns around the debt ceiling and a rating downgrade for government debt in the US, along with geopolitical tensions in the Middle East also weighed on sentiment. Nevertheless, equities rallied strongly in the latter half of the period as central banks in major developed markets left policy rates unchanged. Furthermore, robust corporate earnings, resilient economic data and moderating inflationary pressure raised hopes for a soft landing and supported prospects for interest rate cuts in 2024. Against this global backdrop, equities in the US and Japan gained the most.

The fund underperformed the comparative index over the year. The underweight stance in the information technology sector detracted the most from relative returns. The overweight position in consumer staples also held back gains. Conversely, the bias against the energy sector added relative value. At a stock level, the lack of exposure to semiconductor major Nvidia held back relative performance. Shares in the company surged on the back of its strong earnings and outlook. The company also announced a partnership with Google, which will involve its technology being sold through Google's cloud. Not holding e-commerce and cloud computing major Amazon.com and social media major Meta Platforms also held back relative gains as their shares rose on the back of their strong earnings growth outlook. The underweight stance in Google's parent Alphabet further detracted from relative returns as its shares rose on the back of its positive earnings announcement. In the financials sector, the holding in US health insurer Humana hampered performance. Its shares declined after the company warned that higher medical costs could hurt profits in 2024 due to continued demand for non-urgent surgeries from older adults that were delayed during the pandemic. On a positive note, the underweight stance in consumer technology major Apple contributed to returns as its shares fell amid concerns over weakening iPhone 15 sales and broader hardware sales projections. Belgian pharmaceuticals company UCB also added value. Its shares rose after the company released quarterly profits that exceeded consensus estimates, driven by strength from its Evenity and Cimzia drugs. Additionally, the company provided 2024 guidance that was better than analyst expectations. The holding in CaixaBank also enhanced gains due to delayed monetary easing by the European Central Bank, which resulted in positive earnings revisions.

The Global Low Volatility strategy is a defensive equity strategy that is managed to exhibit lower volatility than the broader market. The portfolio continues to have a bias towards lower volatility stocks and maintains a fairly defensive posture. The portfolio maintains a high exposure to fundamentally buy-rated stocks while seeking to minimise absolute risk with an expectation of achieving 60–80% of the volatility of the MSCI World Index over the long term.

Global Technology Fund 8

FUND SIZE AS AT 30.04.2024 : EUR 19,954 MILLION

Manager's Overview

Global equities rose over the 12-month period to April 2024. Equity markets delivered muted performance over the first half of the period as inflation moderated but remained above target levels and led major central banks to continue to raise interest rates. Concerns around the debt ceiling and a rating downgrade for government debt in the US, along with geopolitical tensions in the Middle East also weighed on sentiment. Nevertheless, equities rallied strongly in the latter half of the period as central banks in major developed markets left policy rates unchanged. Furthermore, robust corporate earnings, resilient economic data and moderating inflationary pressure raised hopes for a soft landing and supported prospects for interest rate cuts in 2024. Against this global backdrop, equities in the US and Japan registered the strongest gains. Emerging markets also ended higher but lagged developed markets, due to sluggish economic growth in China. At a sector level, information technology and telecommunications companies rose strongly as the artificial intelligence (AI) theme supported investor sentiment.

The fund recorded strong absolute returns, but underperformed the comparative index over the period. Stock selection in the semiconductors and semiconductor equipment and financial services sectors detracted from returns. The underweight stance in the technology hardware, storage and peripherals segment contributed to relative performance, while stock selection in the software sector added value. The lack of exposure to semiconductor group Nvidia was the biggest detractor from relative performance, driven by its strong earnings growth over the period. Its shares were further supported by positive expectations for its Al offerings. French payments company Worldline was another major detractor from returns as its shares fell sharply after the company surprised investors with a cut to its full-year targets. Worldline said an economic slowdown had hit its business, particularly in Germany. On a positive note, the underweight stance in consumer technology major Apple contributed to relative returns as its shares slid amid concerns over weakening iPhone 15 sales and broader hardware sales projections. The holding in Rolls-Royce also rose as investors welcomed its restructuring plan. Performance was further driven by a recovery in long-haul flying, rising global defence spending and price increases on its products and services.

The manager continues to employ a fundamental, bottom-up approach, and focuses on structural technological developments to identify companies that are well positioned to capitalise on some opportunities in the sector, such as cloud, e-commerce and Al. These are the long-term growth drivers and stocks that are misunderstood by the market for some reason and are trading at attractive valuations. So far this year, the performance of the technology sector has been very narrow, with Al stocks being the dominant market theme. For the rest of 2024, we expect technology themes to broaden out, given the number of underappreciated opportunities in the value chain. Overall, we remain positive on the sector, and our bottom-up stock-picking and disciplined investment approach will be critical throughout the rest of the year.

Global Thematic Opportunities Fund 8

FUND SIZE AS AT 30.04.2024 : USD 1,700 MILLION

Manager's Overview

Global equities ended the review period higher. Equities delivered muted performance over the first half of the period as inflation moderated but stayed above target levels and led major central banks to continue to raise interest rates. Concerns around the debt ceiling and a rating downgrade for government debt in the US, along with geopolitical tensions in the Middle East also weighed on sentiment. Nonetheless, equities rallied in the latter half of the period as major developed market central banks left policy rates unchanged. Healthy corporate earnings and economic data, receding inflationary pressures and prospects of interest rate cuts in 2024 further provided support. Against this backdrop, US and Japanese equities rose strongly. At a sector level, information technology, communication services and financials were among the leading gainers.

The fund underperformed the comparative index over the year. The clean energy strategy was the key detractor from performance as the alternative/clean energy space performed negatively. The global health care strategy weighed on returns as the health care sector lagged broader global equity markets. Meanwhile, the exposure to the global technology strategy supported performance amid optimism around the artificial intelligence (AI) theme.

The portfolio aims to achieve long-term capital growth and invests in equities that may benefit from structural or secular changes in economic and social factors. These can include themes such as disruptive technologies, demographic shifts and climate change. Over the year, the managers reduced the global health care and technology strategies in favour of opportunities. For instance, a new global Al strategy was introduced to add some key companies that are beneficiaries of long-term Al technology implementation. The managers also added a new Transitions Materials strategy, which focuses on companies that mine, produce and process minerals and commodities that are essential to reduce carbon emissions and greenhouse gases globally.

Greater China Fund 8

FUND SIZE AS AT 30.04.2024 : USD 758 MILLION

Manager's Overview

Chinese equities rose over the period. Investor confidence recovered gradually, alongside improving fundamentals and the government's stepped-up efforts to support the economy. The People's Bank of China adopted an accommodative stance. Major cities relaxed home purchase restrictions to revive the housing market. The China Securities Regulatory Commission introduced stricter rules to guide the long-term healthy development of the capital market. Data released earlier in 2024 added to signs that China's economic recovery may be gaining traction. The government's unwavering commitment to achieving high-quality and sustainable growth, coupled with the current undervaluation of Chinese stocks, presents compelling investment opportunities.

The fund underperformed the comparative index over the period, mainly due to selected holdings in the financials and health care sectors. Pharmaceuticals company Cutia Therapeutics was negatively impacted by pressure from the expiration of its initial public offering lockup period. Sportswear maker Li Ning suffered amid sluggish demand, intensified competition and price sensitivity, which added to inventory pressure. The underweight position in chip foundry Taiwan Semiconductor Manufacturing Company (due to the maximum 10% limit allowed in a single holding) held back relative gains. Its share price benefited from a cyclical recovery and an emerging trend of artificial intelligence innovation, which also lifted printed circuit board maker Gold Circuit Electronics.

The managers focus on areas that can deliver sustainable quality growth over the next three to five years. As a result of the bottom-up stock selection process, the fund has an overweight exposure to China and an underweight allocation to both Hong Kong and Taiwan. Selected consumer and communication services stocks are among the key holdings in the portfolio. New Oriental Education & Technology Group is preferred for its competitive advantages and improving market conditions. E-commerce platform PDD Holdings and connector manufacturer Lotes are other key positions in the portfolio.

Iberia Fund⁸

FUND SIZE AS AT 30.04.2024 : EUR 166 MILLION

Manager's Overview

Iberian equities, along with their European counterparts, rose over the 12months under review, but there was some volatility along the way. Sentiment remained fragile amid elevated interest rates and geopolitical tensions. However, markets bounced back strongly towards the end of 2023 amid cooling inflation. The start of 2024 saw European equities supported by resilient economic and corporate data, as well as a number of dovish cues from major central banks. In April, markets responded negatively to speculation that central banks will not ease their monetary policies as quickly as previously hoped, given resilient growth and sticky inflation data. While the European Central Bank maintained interest rates at record-high levels during its April meeting, officials indicated that a looser monetary policy would be appropriate if inflation continues to converge towards the central bank's 2% target.

The fund delivered positive results and outperformed the index over the period. Gains were driven by strong security selection in the industrials, health care and information technology (IT) sectors. Elsewhere, returns from the fund's large underweight in utilities were offset by the bias against financials and energy. At a stock level, not holding Energias De Portugal and EDP Renovaveis added significant relative value, as the utilities sector remained out of favour over the reporting period. Spanish specialty pharmaceuticals business Farma Rovi performed well after it reported strong FY 2023 results. Conversely, the lack of exposure to Banco Santander (financials) and Galp Energia (energy) held back relative gains.

The manager favours quality businesses with superior growth potential, with a preference for those companies that are supported by structural drivers. The focus remains on identifying opportunities in good quality, structural growth businesses that trade on attractive valuations. At a sector level, the fund retains a large overweight stance in the industrials, IT, health care and consumer sectors, but remains structurally underweight in macroeconomically driven sectors such as banks and utilities.

India Focus Fund 7,8

FUND SIZE AS AT 30.04.2024 : USD 2,580 MILLION

Manager's Overview

Indian equities surged over the period. India's higher growth, robust economic fundamentals, improved government finances, structurally lower inflation and positive real rates remain attractive for global investors. India is seeing the emergence of a new engine of growth through a rise in infrastructure and manufacturing. Supply chain diversification out of China is leading to growth in manufacturing, particularly in areas such as electronics, chemicals, consumer goods, automobiles and textiles.

The fund underperformed the comparative index over the period, mainly due to an underweight stance in the utilities sector, while robust stock picking in the industrials sector enhanced relative gains. HDFC Bank underachieved on margin improvements due to tight liquidity in the system and the bank's focus on costs, which led to weaker than expected growth in low-cost current account, savings account (CASA) deposits due to slower than anticipated branch rollout. Infosys faced a seasonally weak quarter, due to lower discretionary spending, weaker revenues from softer sales, tepid product business and wage hikes. Elsewhere, the lack of exposure to NTPC, Zomato and Trent held back gains. The holding in Make My Trip proved rewarding after it reported double-digit revenue growth during the first quarter amid strong demand for leisure travel across domestic and international destinations, leading to robust quarterly gross bookings, revenue and profit. Blue Star reported a huge jump in its fourth quarter adjusted profit, buoyed by heavy demand for its air-conditioners as consumers prepare for a hotter-than-usual summer season.

The management team builds the portfolio with a fundamental-driven bottom-up stock selection approach. The focus is on investing in high-quality companies with strong management teams operating in sectors with structural growth opportunities, such as consumer, financials, industrials and health care. HDFC Bank, ICICI Bank and Axis Bank are key positions within financials. Within consumer discretionary, Maruti Suzuki is a preferred holding.

LARGEST HOLDINGS AS AT 30.04.2024		
	Market Value (USD)	Net Assets (%)

Indonesia Fund

FUND SIZE AS AT 30.04.2024 : USD 196 MILLION

Manager's Overview

Indonesian equities fell sharply over the period. Initially, markets came under pressure amid softer commodity prices, weak demand from mainland China and unfavourable global cues. However, Indonesian equities rallied in the first quarter of 2024, fuelled by structural support from ongoing investments in infrastructure and the nickel supply chain. Most sectors ended in negative territory. Consumer discretionary, health care and communication services were the key laggards, while utilities and financials were notable gainers.

The fund posted negative returns but outperformed the comparative index over the period. At the sector level, the underweight positioning in the consumer discretionary and communication services sectors along with security selection in financials enhanced gains. In consumer discretionary, the underweight stance in Goto Gojek Tokopedia (consultancy) added relative value as its share price declined. Astra Otoparts (automotive manufacturer) contributed to performance. In financials, Bank Negara and Bank Mandiri fared well. Conversely, an underweight allocation to materials and weak stock picking in energy proved unfavourable. Within materials, the lack of exposure to Amman Mineral (copper and gold miner) and Barito Pacific (chemical) weighed on performance as their share prices advanced.

Ajinkya Dhavale assumed portfolio management responsibilities for the FF Indonesia Fund with effect from 29 February 2024. Ajinkya's investment style and approach is very similar to the previous manager Madeleine Kuang. Ajinkya has realigned the portfolio based on where he is finding investment opportunities with minimum turnover. He employs a fundamental, bottom-up driven investment approach, supported by stock selection, industry analysis and sustainability assessment. The focus is on identifying mispriced opportunities with attractive risk-reward profiles. The fund is overweight in the financials, consumer staples, real estate and utilities sectors. Among banks, Bank Central Asia (BCA) and Bank Mandiri remain core holdings. In the consumer sector, Indofood remains a high conviction position.

Italy Fund 8

FUND SIZE AS AT 30.04.2024 : EUR 346 MILLION

Manager's Overview

Italian equities rallied over the period, despite experiencing bouts of volatility. Sentiment remained fragile amid elevated interest rates and geopolitical tensions. However, markets bounced back strongly towards the end of 2023 amid cooling inflation. Resilient economic and corporate data, as well as a number of dovish cues from major central banks supported equities at the start of 2024. In April, markets responded negatively to speculation that central banks will not ease their monetary policies as quickly as previously hoped, given resilient growth and sticky inflation data. While the European Central Bank (ECB) maintained interest rates at record-high levels during its April meeting, officials indicated that a looser monetary policy would be appropriate if inflation continues to converge towards its 2% target.

The fund delivered strong positive returns during the period but underperformed the comparative index. Holdings across information technology and the large overweight exposure to industrials held back relative gains. However, the underweight allocation to utilities, energy and consumer staples proved rewarding. De'Longhi rallied on impressive third quarter results as revenue largely delivered on expectations, with continued growth in coffee and nutribullet. Strong cost performance with lower advertising and logistic costs also supported its earnings results. State-owned bank Monte dei Paschi di Siena rose on stronger-than-expected third-quarter earnings, fuelled by higher interest rates. The underweight allocation to both Ferrari and Intesa Sanpaolo proved unrewarding. The luxury carmaker reported a solid set of fourth quarter results and revenues for 2023 were broadly in line with expectations. The banking group reported a net interest income beat and guided for net profit of "above" €8 billion.

The range of economic outcomes appears to be narrowing, with less likelihood of a major recession. The ECB is likely to kick off its rate cutting cycle at its June meeting, followed by the Bank of England later in the year, while no rate cuts are expected from the US Federal Reserve in 2024. The managers look for change opportunities in Italian companies where the market fails to see future growth potential based on short-term issues or misconceptions, but that are trading on interesting valuation multiples.

Japan Growth Fund 8

FUND SIZE AS AT 30.04.2024 : JPY 10,381 MILLION

Manager's Overview

The Japanese equity market rose during the period as extended buying by overseas investors drove share price gains. Market participants were encouraged by a steady stream of corporate governance related developments, spurred by reform measures from the Tokyo Stock Exchange (TSE), and largely positive domestic earnings. In March, the Bank of Japan (BoJ) announced its decision to end its negative interest rate policy and eliminate yield curve controls. This was the first move to tighten the monetary policy in Japan in nearly two decades. From now on, the BoJ's primary policy tool will be short-term interest rates, which it aims to keep at around 0-0.1%. The lifting of unconventional easing measures was interpreted as a dovish hike and the yen subsequently fell to a 34-year low against the US dollar. Value stocks outperformed growth names over the period. All sectors ended the 12-month period with positive returns, with financials, energy and real estate leading the

The fund underperformed the comparative index over the review period. Stock selection in the services, wholesale trade and information & communication sectors detracted from returns, while security selection in the chemicals and precision instruments segments proved beneficial. Holdings in machinery and factory automation-related companies, including MISUMI Group, underperformed as adverse business conditions and a delayed recovery in the order cycle, primarily due to economic headwinds in China, raised concerns over earnings. However, leading indicators such as machine tool orders are close to a trough, and earnings are expected to recover in 2024. Motor core and semiconductor leadframe manufacturer Mitsui High-tec disappointed the market with its conservative fiscal 2024 earnings guidance, reflecting the need for up front investments to meet rising demand for motor cores used in hybrid vehicles. Elsewhere, the lack of exposure to exporters such as Toyota Motor, whose shares rose due to yen weakness, held back relative gains. On a positive note, the holding in Osaka Soda rose, supported by strong earnings growth. The exposure to semiconductor-related names added value as US major Nvidia's earnings beat expectations and its positive outlook drove gains across the sector. Tokyo Electron was among the top contributors to returns over

A transition to mild inflation and the normalisation of the monetary policy in Japan is positive for both the domestic economy and the stock market. Japanese companies are raising prices across the board and the latest spring wage negotiations are set to deliver higher levels of income growth, which will provide reassurance on the consumer side. Meanwhile, TSE-led governance reforms are gaining momentum and progress is being made in the rationalisation of cross shareholdings.

Japan Value Fund 8

FUND SIZE AS AT 30.04.2024 : JPY 224,722 MILLION

Manager's Overview

The Japanese equity market rose during the period as extended buying by overseas investors drove share price gains. Market participants were encouraged by a steady stream of corporate governance related developments, spurred by reform measures from the Tokyo Stock Exchange, and largely positive domestic earnings. In March, the Bank of Japan (BoJ) announced its decision to end its negative interest rate policy and eliminate yield curve controls. This was the first move to tighten the monetary policy in Japan in nearly two decades. From now on, the BoJ's primary policy tool will be short-term interest rates, which it aims to keep at around 0–0.1%. The lifting of unconventional easing measures was interpreted as a dovish hike and the yen subsequently fell to a 34-year low against the US dollar. Value stocks outperformed growth names over the period. All sectors ended the 12-month period with positive returns, with financials, energy and real estate leading the way.

The fund recorded strong absolute returns but underperformed the comparative index over the review period. Stock selection in the machinery and electric appliances sectors detracted from performance, but added value in the retail trade and chemicals segments. Holdings in the pharmaceuticals sector underperformed. Although Nippon Shinyaku positively revised its full-year earnings and dividend guidance, weaker-than-expected US sales of Viltepso, a treatment for Duchenne muscular dystrophy (DMD), raised some concerns. However, the company explained that this was down to delivery delays at a wholesaler and the number of patients being treated with Viltepso is increasing. Meanwhile, acquisition costs overshadowed Astellas Pharma's quarterly results and deflected from the solid progress made on key products. On a positive note, holdings in financials outperformed. Mega banks Sumitomo Mitsui Financial Group and MUFG benefited from a pickup in long-term interest rates and renewed weakness in the yen. Rising speculation that the BoJ would end its negative interest rate policy lifted their share prices ahead of the actual event. Shares in real estate developer Mitsubishi Estate advanced, supported by an improving office market and the BoJ's normalisation of its monetary policy. In the construction sector, the holding in Sumitomo Forestry was a leading contributor to performance. The homebuilder generates a significant proportion of its earnings in the US. It raised its full-year earnings guidance to reflect the strength of its US operations and the positive impact of price hikes in Japan.

The portfolio manager follows a bottom-up stock selection approach that focuses on valuation analysis. He typically favours stocks that are undervalued relative to their balance sheet quality, cashflow and earnings growth potential. Factors such as returns on capital and the sustainability of earnings are also important. Given the BoJ's dovish tone and limited scope for yen strengthening, export-oriented companies look attractive amid signs of a recovery in the global manufacturing Purchasing Managers' Index (PMI). The manager favours exposure to industrial cyclicality through technology and factory automation-related names.

Latin America Fund

FUND SIZE AS AT 30.04.2024 : USD 386 MILLION

Manager's Overview

Latin American equities rose during the period due to falling inflation, an easing monetary cycle by most central banks in the region, ongoing nearshoring-led investment and the region's increasingly important role in the global supply chain for critical metals as the US seeks to reduce supply-chain reliance on China. Sentiment was guided by weaker demand from China given a tough consumer environment in the country. All countries in the region ended in positive territory except Chile. Brazilian equities were supported by an improving domestic economic outlook and easing monetary policy, while Mexico was perceived as the biggest beneficiary of US companies' nearshoring efforts given its proximity to the US. Peru and Colombia also performed well, driven by higher copper and oil prices.

The fund posted positive returns that were in line with the comparative index over the period At a country level, security selection in Mexico and Brazil added value, while the underweight stance in Peru hampered performance. Lender Nu Holdings, logistics company Santos Brasil Participacoes and mining companies Vale and Grupo Mexico were among the top contributors to returns. At a sector level, the positioning in energy and health care detracted from performance. The underweight stance in Petrobras (oil and gas) and the overweight exposure to Hapvida Participacoes (health care) weighed on returns.

The managers follow a high-conviction, bottom-up, quality growth approach, centred on the belief that companies that exhibit strong cash generation and robust balance sheets offer the most attractive opportunities for investors over the medium to long term. Financials is the largest absolute position. The managers own Brazilian companies such as digital challenger bank Nu Holdings, exchange operator B3 SA Brasil Bolsa Balcao, financial services firm Itau Unibanco and Mexico's Grupo Financiero Banorte. Among industrials, transportation stocks such as Grupo Aeroportuario del Pacifico and Grupo Aeroportuario del Sureste are among the key holdings in the portfolio.

Nordic Fund 8

FUND SIZE AS AT 30.04.2024 : SEK 4,565 MILLION

Manager's Overview

Nordic equities rallied over the period, though there was some volatility along the way. Sentiment remained fragile amid elevated interest rates and geopolitical tensions. However, markets bounced back strongly towards the end of 2023 amid cooling inflation. The start of 2024 saw equities supported by resilient economic and corporate data, as well as a number of dovish cues from major central banks. In April, markets responded negatively to speculation that central banks will not ease their monetary policies as quickly as previously hoped, given resilient growth and sticky inflation data. While the European Central Bank (ECB) maintained interest rates at record-high levels during its April meeting, officials indicated that a looser monetary policy would be appropriate if inflation continues to converge towards its 2% target.

The fund delivered strong returns but underperformed the comparative index over the period. Given the fund's bias towards value stocks, it was hurt by investors' preference for growth names over the period. Notably, the lack of exposure to pharmaceuticals business Novo Nordisk proved detrimental as it continued to benefit from euphoria surrounding its popular obesity drug. The manager continues to avoid the stock on valuation grounds. The holding in Intrum was also weak as concerns mounted on the debt collector's own finances, following the sale of part of its non-performing debt portfolio. Conversely, high conviction positions in Stolt Nielsen, Torm and Okeanis Eco Tankers performed strongly. These product tanker companies benefited from elevated product tanker rates due to Russia's halt on diesel exports and the rerouting of ships to avoid attacks by the Houthi militia in Yemen. Extended voyages contribute to tonne-miles for tankers and add potential upside to spot rates, which are already supported by strong fleet utilisation.

The current economic backdrop clearly calls for an active, bottom-up and contrarian investment approach, given the potential for some unloved (but healthy) cyclical stocks to outperform as the market trades once again on fundamentals, rather than on emotions. Moreover, the manager continues to find opportunities among attractively valued small and mid-caps, whose prices have suffered greatly due to investors' lack of interest in the asset class.

Pacific Fund 8

FUND SIZE AS AT 30.04.2024 : USD 860 MILLION

Manager's Overview

Regional equities advanced over the year. The period started on a positive note amid expectations of policy support from China. However, subdued macroeconomic data releases and renewed stress on the financials and real estate sectors in China capped gains in the latter part of the period. Against this backdrop, Chinese and Hong Kong equities slid. Information technology (IT) focused markets with exposure to the US, including Taiwanese and South Korean stocks, gained amid optimism towards artificial intelligence (AI) and memory demand. Australian equities also delivered robust performance.

The fund underperformed the comparative index over the year. An underweight stance in semiconductor giant Taiwan Semiconductor Manufacturing Company held back relative gains. Its shares were supported by Al related optimism. The lack of exposure to Japan's large-cap space, including Toyota Motors weighed on relative returns, as the large-cap value style gained strongly. Investors sold off shares in Japanese internet company Digital Garage despite its solid financial results. Shares in Vietnam's software outsourcing company FPT continued to be re-rated amid an optimistic growth outlook. The latest earnings release from IperionX, an Australian critical metals producer, cited robust progress at its commercial-scale titanium metal manufacturing capabilities in Virginia, US, which underpinned market confidence. The overall strength in cryptocurrency prices supported the position in digital assets and blockchain trading platform provider BC Technology.

The manager focuses on companies with good long-term growth prospects that are cash generative and have strong management teams. The strength in FPT is underpinned by its strong market share and competitive advantage. It stands to benefit from robust growth in Vietnam's software outsourcing space. Thai Beverage is the largest alcohol producer in both the spirits and beer segments in ASEAN. It has a superior returns profile and sustainable cash flow driven by high barriers to entry and pricing power, coupled with a strong balance sheet.

Sustainable All China Equity Fund 2,4,8

FUND SIZE AS AT 30.04.2024 : USD 5 MILLION

Manager's Overview

Chinese equities fell over the period due to concerns over an uneven postpandemic recovery. Authorities issued a series of stimulus measures to shore up the economy. The People's Bank of China adopted an accommodative stance. Major cities relaxed home purchase curbs to revive the property market. The China Securities Regulatory Commission introduced stricter rules to guide the long-term healthy development of the capital market. Encouragingly, data released earlier in 2024 suggested an improvement in China's economic recovery. The government's unwavering commitment to achieving high-quality and sustainable growth, coupled with the undervaluation of Chinese stocks, presents compelling investment opportunities.

The fund outperformed the comparative index over the period, mainly due to security selection in the information technology and consumer discretionary sectors. Printed circuit board maker Gold Circuit Electronics and electronics manufacturer Quanta Computer benefited from a cyclical recovery and an emerging trend of artificial intelligence innovation. Discount e-commerce retailer PDD Holdings reported strong performance on both domestic and overseas platforms. Conversely, the macroeconomic weakness, regulatory changes and contagion risks from its property exposure weighed on insurer Ping An Insurance Group Company of China.

The managers focus on selecting quality companies with sustainable growth prospects and seek opportunities that contribute to a sustainable planet, sustainable enterprises and sustainable lives. They integrate environmental, social and governance (ESG) factors into their investment decisions while promoting sustainability characteristics and contributing to a sustainable future. E-commerce giant PDD Holdings is a key holding in the portfolio. It has an efficient management team, and is witnessing strong growth in gross merchandise value in its e-commerce business and improving profitability. Retail-oriented bank China Merchants Bank is favoured for its customer stickiness, which forms a stable source of cheap funding and fee generation.

Sustainable Asia Equity Fund 8

FUND SIZE AS AT 30.04.2024 : USD 2,866 MILLION

Manager's Overview

Asia ex Japan equities advanced. The period started on a positive note amid expectations of policy support from China. However, subdued macroeconomic data releases and renewed stress on the financials and real estate sectors in China capped gains. Chinese and Hong Kong equities slid. Information technology (IT) focused markets, including Taiwanese and South Korean stocks, advanced amid optimism towards artificial intelligence (AI) related memory demand. Strong economic growth in India continued to drive domestic stocks.

The fund lagged the comparative index over the year. Security selection in China and Hong Kong detracted from relative returns. From a sector perspective, stock picking in the consumer discretionary sector held back gains. Selected positions in the financials sector also weighed on performance. Insurers AIA Group and Prudential declined on the back of a subdued outlook for China. Nevertheless, AIA Group is a strong conviction holding in the portfolio, with a long runway for growth in Asian markets. Concerns about a weaker-than-expected recovery in consumer spending weighed on some robust consumer franchises in China such as China Mengniu Diary. Selected positions in India supported performance. Ongoing foreign inflows into Indian equities and positive growth momentum supported positions in selected stocks,

including Axis Bank, ICICI Bank and Shriram Finance. The long-term investment rationale for these stocks remains intact. Axis Bank and ICICI Bank have strong asset quality and well-capitalised balance sheets. Shriram Finance is expected to gain momentum, as the merger of Shriram City Union Finance and Shriram Capital Ltd with Shriram Finance Company was well received by investors.

The fund is focused on engagement and a deeper integration of environmental, social and corporate governance (ESG) issues in the investment process to create a portfolio of high-quality growth companies that maintain high or improving sustainability characteristics. The portfolio had 79.9% exposure to stocks with high ESG ratings, which are either rated BBB and above as per MSCI or rated C or above based on Fidelity's proprietary ESG rating where MSCI ratings are not available due to non-coverage. Also, 14.2% of the fund was held in stocks with lower but improving ESG characteristics. These are companies rated BB or below by MSCI, but where the fund management team believes the company could demonstrate improvement via their engagement

Sustainable Asia Equity II Fund 1,3,4,5,8

FUND SIZE AS AT 30.04.2024 : USD 1,033 MILLION

Manager's Overview

Regional equities advanced. The period started on a positive note amid expectations of policy support from China. However, subdued macroeconomic data releases and renewed stress on the financials and real estate sectors in China capped gains. Chinese and Hong Kong equities slid. Information technology (IT) focused markets, including Taiwanese and South Korean stocks, advanced amid optimism towards artificial intelligence (AI) related memory demand. Strong economic growth in India continued to drive domestic stocks.

The fund lagged the comparative index over the year. Security selection in China and Hong Kong detracted from relative returns. From a sector perspective, stock picking in consumer discretionary as well as selected positions in financials held back gains. Insurers AIA Group and Prudential declined on the back of a subdued outlook for China. Nevertheless, AIA Group is a strong conviction holding in the portfolio, with a long runway for growth in Asian markets. Concerns about a weaker-than-expected recovery in consumer spending weighed on some robust consumer franchises in China such as China Mengniu Diary. On a positive note, selected positions in India supported performance. Ongoing foreign inflows into Indian equities and positive growth momentum supported positions in selected stocks, including Axis Bank, ICICI Bank and Shriram Finance. The long-term investment rationale for these stocks remains intact. Axis Bank and ICICI Bank have strong asset quality and wellcapitalised balance sheets. Shriram Finance is expected to gain momentum, as the merger of Shriram City Union Finance and Shriram Capital Ltd with Shriram Finance Company was well received by investors.

The fund has an overweight exposure to financials, notably banks and insurance companies. The position is Indian private lender ICICI Bank is retained. The bank continues to benefit from increasing banking penetration and market share gains from government-owned banks given its strong franchise and technology leadership. The exposure to athletic-apparel producer Anta Sports was maintained. Sportswear is a secular growth subsector in China, driven by increasing awareness of the importance of a healthy lifestyle. Anta's FILA brand is doing well, given its unique positioning, good operation capability and strong product offering.

Sustainable Asian Focus Fund 4,9

FUND SIZE AS AT 30.04.2024 : USD 5 MILLION

Manager's Overview

Regional equities advanced over the year. The period started on a positive note amid expectations of policy support from China. However, subdued macroeconomic data releases and renewed stress on the financials and real estate sectors in China capped gains in the latter part of the period. Against this backdrop, Chinese and Hong Kong equities slid. Information technology (IT) focused markets with exposure to the US, including Taiwanese and South Korean stocks, gained amid optimism towards artificial intelligence (AI) and memory demand. Strong economic growth in India continued to drive domestic stocks.

The fund aims to invests in sustainable companies that contribute to environmental or social objectives, which are aligned with one or more of the United Nations Sustainable Development Goals (SDGs). The fund underperformed the comparative index over the period. Selected financial holdings declined, while preferred IT positions enhanced gains. The macroeconomic weakness in China weighed on selected holdings in third-party testing company Centre Testing International and dairy producer China Mengniu Dairy. Hong Kong-based AIA Group was also at the receiving end of investor disdain towards China, despite an improvement in the value of its new business and healthy growth in the broader Asian market. Encouragingly, chipmaker SK Hynix and electronics company Chicony Electronics benefited from a cyclical recovery and a positive outlook led by Al innovation.

The fund is focused on a fundamentals-driven search for the best opportunities among sustainable investments that would capture structural growth in Asia and aid positive societal consequences over the long term. The focus is on bottomup stock selection and to find long-term winners with solid management teams at reasonable valuations. Taiwan's global leading semiconductor foundry Taiwan Semiconductor Manufacturing Company (TSMC) offers structural growth within semiconductors and is a front-runner with cutting edge technology. Broader software adoption will drive workplace and infrastructure efficiencies. India's private sector banks, including HDFC Bank and Axis Bank are favoured for their ability to widen credit access in an under-supplied market.

Sustainable Biodiversity Fund 4,9

FUND SIZE AS AT 30.04.2024 : USD 5 MILLION

Manager's Overview

Global equities rose over the 12-month period to April 2024. Equity markets delivered muted performance over the first half of the period as inflation moderated but remained above target levels and led major central banks to continue to raise interest rates. US and Japanese stocks led gains, while emerging markets ended higher but lagged developed markets, largely due to sluggish economic growth in China. At a sector level, information technology and communication services companies rose strongly, as the artificial intelligence theme spurred investor sentiment.

The fund underperformed the comparative index over the review period. The overweight stance in machinery weighed on returns. The position in Energy Recovery, a company involved in energy recovery devices for desalination plants, detracted from performance as its core desalination business delivered an uneven stream of revenues due to project delays, which resulted in earnings misses. SolarEdge, a solar power optimisation and photovoltaic monitoring solution provider, held back gains due to a slowing residential solar endmarket, particularly in Europe. On a positive note, the holding in hydro-power development company National Hydroelectric Power added value. Its shares gained after it announced a sizeable investment in a pumped power storage project in Gujarat, which has attracted significant investor attention. Allowed returns were higher than anticipated, and the company should benefit from significant growth over the next few years.

The fund invests in companies that provide solutions for biodiversity issues, namely changes in land and sea use; direct exploitation; and climate change pollution. The fund also invests in companies that follow the best practices in their own operations or that allocate capital to find new solutions. These solution providers account for most of the holdings in the portfolio. The best-inclass category is smaller but makes an essential contribution when it comes to addressing biodiversity losses. These companies can have a meaningful negative biodiversity impact, but still have the most ambitious targets in terms of cutting emissions and their impact on biodiversity.

Sustainable China A Shares Fund 2,4,8

FUND SIZE AS AT 30.04.2024 : USD 4 MILLION

Manager's Overview

Chinese equities fell over the period due to concerns over an uneven postpandemic recovery. Authorities issued a series of stimulus measures to shore up the economy. The People's Bank of China adopted an accommodative stance. Major cities relaxed home purchase curbs to revive the property market. The China Securities Regulatory Commission introduced stricter rules to guide the long-term healthy development of the capital market. Encouragingly, data released earlier in 2024 suggested an improvement in China's economic recovery. The government's unwavering commitment to achieving high-quality and sustainable growth, coupled with the undervaluation of Chinese stocks, presents compelling investment opportunities.

The fund outperformed the comparative index over the period, mainly due to favourable positions in the information technology, industrials and consumer discretionary sectors. Miner CMOC Group benefited from a rebound in the copper price, as well as solid production and sales of copper. Printed circuit board maker Gold Circuit Electronics and electronics manufacturer Quanta Computer benefited from a cyclical recovery and an emerging trend of artificial intelligence innovation. Conversely, Asymchem Laboratories Tianjin suffered due to the loss of high-margin COVID-19 related orders, pricing pressure in China and geopolitical tensions around a US bill targeting Chinese contract development and manufacturing organisations.

The manager focuses on China's growth story while seeking to contribute to the construction of a sustainable planet, sustainable lives and sustainable enterprises. Home appliance manufacturer Midea Group is a key position, with competitive advantages in brand recognition, product quality and a broad distribution channel. Retail-oriented bank China Merchants Bank is favoured for its customer stickiness, which forms a stable source of cheap funding and fee

Sustainable Climate Solutions Fund 4,9

FUND SIZE AS AT 30.04.2024 : USD 27 MILLION

Manager's Overview

Global equities rose over the 12-month period to April 2024. Equity markets delivered muted performance over the first half of the period as inflation moderated but remained above target levels and led major central banks to continue to raise interest rates. US and Japanese stocks led gains, while emerging markets ended higher but lagged developed markets largely due to sluggish economic growth in China. At a sector level, information technology (IT) and communication services companies rose strongly as the artificial intelligence theme spurred investor sentiment.

The fund underperformed the comparative index over the review period. The overweight stance in machinery weighed on returns. The position in Energy Recovery, a company involved in energy recovery devices for desalination plants, detracted from performance as its core desalination business delivered an uneven stream of revenues due to project delays, which resulted in earnings misses. The holding in factory automation and machinery parts provider MISUMI Group weighed on performance. The company reported sluggish growth in monthly sales data, which raised concerns over the strength of underlying capital expenditure demand. On a positive note, the allocation to hydro-power development company National Hydroelectric Power added value. Its shares gained after it announced a sizeable investment in a pumped power storage project in Gujarat, which has attracted significant investor attention. Allowed returns were higher than anticipated, and the company should benefit from significant growth over the next few years.

The FF Sustainable Global Climate Solutions Fund is a global equity portfolio, designed to achieve long-term capital growth by investing in companies that enable global decarbonisation efforts. The portfolio managers have identified and bucketed decarbonisation solutions into five large groups: electrification of transport, clean power generation, industrial automation & digitalisation, infrastructure decarbonisation and consumer reuse. As a result of bottom-up stock selection within these themes, the fund is overweight in the industrials, IT

Sustainable Consumer Brands Fund 8

FUND SIZE AS AT 30.04.2024 : USD 1,152 MILLION

Manager's Overview

Global equities rose over the 12-month period to April 2024. Equity markets delivered muted performance in the first half of the period as inflation moderated but remained above target levels and led major central banks to continue to raise interest rates. However, markets rallied strongly in the latter half of the period as central banks in major developed markets left policy rates unchanged. Furthermore, robust corporate earnings, resilient economic data and moderating inflationary pressure raised hopes for a soft landing. Against this global backdrop, equities in the US and Japan gained the most. The S&P Global US manufacturing Purchasing Managers' Index (PMI) fell to 50.0 in April, lower than the reading of 51.9 in March and below expectations of 52.0. Manufacturers scaled back purchasing activity given a fresh decline in new orders.

The fund generated positive returns but underperformed the comparative index over the review period. The overweight stance in consumer staples held back gains, while security selection in information technology (IT) proved rewarding. Certain luxury brands such as Richemont Cie Financiere came under pressure, as a slowdown in demand for luxury goods in China and a challenging macroeconomic environment weighed on share price performance. Shares in LVMH Moet Hennessy declined following a recent rating downgrade, citing low demand in the luxury space. Nestle detracted from returns as it underperformed a rising market and was hit by concerns about the impact of GLP-1 obesity drugs on the food industry. Conversely, e-commerce conglomerate Amazon.com continued to add value on strong revenue growth, driven by strength in its retail and Amazon Web Services segments. Nvidia continued to rally, as it unveiled its latest generation of artificial intelligence (AI) chips and a new AI software platform.

The manager looks to invest in businesses that exhibit strong brands with a demonstrable consumer moat reflected in superior pricing power, innovation and valuable intellectual property. Importance is placed on the quality of the management team and their track record, as the manager believes a clear vision on brand and coherent execution are essential in a globalised world consisting of a multitude of competitors. Sustainable investing is core to the fund's quality-focused and fundamentals-driven investment process. The strategy focuses on issuers with robust social and environmental practices, which should reflect an enhanced brand leadership and market share over time.

Sustainable Demographics Fund 8

FUND SIZE AS AT 30.04.2024 : USD 1,068 MILLION

Manager's Overview

Global equities rose over the 12-month period to April 2024. Equity markets delivered muted performance in the first half of the period as inflation moderated but remained above target levels and led major central banks to continue to raise interest rates. However, markets rallied strongly in the latter half of the period as central banks in major developed markets left policy rates unchanged. Furthermore, robust corporate earnings, resilient economic data and moderating inflationary pressure raised hopes for a soft landing. Against this global backdrop, equities in the US and Japan gained the most. The S&P Global US manufacturing Purchasing Managers' Index (PMI) fell to 50.0 in April, lower than the reading of 51.9 in March and below expectations of 52.0. Manufacturers scaled back purchasing activity given a fresh decline in new orders.

The fund generated strong positive returns but underperformed the comparative index over the review period. At a sector level, the exposure to financials held back gains, while certain conviction holdings supported performance. At a stock level, luxury brand LVMH Moet Hennessy came under pressure following a recent rating downgrade, citing low demand in the luxury space. Insurance company AIA Group detracted from returns, despite reporting upbeat quarterly results and strong new business growth. The underweight stance in Nvidia weighed on relative returns as the stock continued to rally after it unveiled its latest generation of artificial intelligence (AI) chips. Conversely, e-commerce conglomerate Amazon.com continued to add value on strong revenue growth, driven by strength in its retail and Amazon Web Services segments. Taiwan Semiconductor rallied along with the broader semiconductor industry on the back of increased optimism surrounding Al.

The fund invests in companies where predictable and long-term structural drivers related to demographics drive earnings and growth, with a pronounced focus on strong sustainability characteristics. Sector positioning is aligned with demographics-driven growth to harness the benefits from three thematic drivers: higher life expectancy; expanding middle-class wealth, particularly in emerging markets; and population growth. The fund has significant exposure to the health care, consumer discretionary and information technology sectors. Notable holdings include luxury conglomerate LVMH, contract research organisation ICON and e-commerce player Amazon.com.

Sustainable Emerging Markets Equity Fund 8

FUND SIZE AS AT 30.04.2024 : USD 1,564 MILLION

Manager's Overview

Emerging markets advanced over a period marked by distinct volatility. Sentiment oscillated sharply as markets globally grappled with elevated inflation in the developed world along with the timeline for interest rate cuts, geopolitical tensions and the pace of the economic recovery in China. In recent months, markets were strengthened by encouraging economic trends such as receding recessionary pressure in the US and rising commodity prices. Chinese equities led gains, supported by solid first-quarter GDP figures, resilient corporate earnings and optimism around policy support. Against this backdrop, all regions posted positive returns, led by Latin America, followed by emerging Asia and emerging Europe, the Middle East and Africa (EMEA).

The fund posted positive returns but underperformed the comparative index over the year. At the sector level, robust stock picking in the information technology (IT) sector contributed the most to performance. SK Hynix, Media Tek and ASML Holding were among the top contributors to returns. Conversely, weak stock selection in the consumers sector hampered performance. Li Ning, China Mengniu Dairy, and Zhongsheng Group held back gains.

During the period, the managers continued to focus on identifying and owning well-managed businesses with attractive return profiles, an accretive reinvestment opportunity and valuations that offer an adequate margin of safety on a free-cash-flow basis. The exposure to IT was reduced to take profits, as valuations have reached mid-cycle levels. The allocation to SK Hynix, ASML Holding and Taiwan Semiconductor Manufacturing was reduced. The proceeds were used to increase the exposure to Samsung Electronics, which is trading at a relatively reasonable valuation. Within financials, the managers continue to diversify their ownership in Indonesian banks such as Bank Mandiri and Bank Central Asia. They also have exposure to exchange operator B3 SA Brasil Bolsa Balcao given its strong fundamentals and attractive valuation.

Sustainable Emerging Markets Ex China Fund 4,8

FUND SIZE AS AT 30.04.2024 : USD 8 MILLION

Manager's Overview

Emerging markets ex China advanced during a period marked by distinct volatility. Sentiment oscillated sharply as global markets grappled with elevated inflation in the developed world, along with the timeline for interest rate cuts and geopolitical tensions. Major markets, namely India, Taiwan and South Korea, were among the best performers. Investors focused on India's growth prospects, which were well supported by an expanding consumer sector, strong government focus on manufacturing and infrastructure development, high foreign exchange reserves, and potential benefits from the shift in global supply chains. Technology-focused South Korean and Taiwanese markets benefited from enthusiasm over artificial intelligence (AI), which is expected to boost demand for high performing memory chips and related servers.

The fund posted positive returns and marginally outperformed the comparative index over the year. At the sector level, security selection in the information technology (IT) and consumer discretionary sectors contributed the most to returns, along with the underweight positioning in materials. Nu Holdings, MakeMyTrip and SK Hynix added value. Conversely, weak stock selection in consumer staples and industrials hampered performance. Here, Universal Robina, Localiza Rent A Car and Armac Locaco held back gains.

The portfolio managers look for high quality companies that are capable of delivering consistent returns and are valued at a reasonable price. These tend to be companies that exhibit strong management quality and solid corporate governance practices, and that have robust sustainability credentials. The portfolio's largest overweight exposure at the sector level is to financials. Key holdings include India's largest private sector banks HDFC Bank, ICICI Bank, and Axis Bank, and a diversified set of names across a range of markets, including Kazakhstan's e-commerce and payments platform Kaspi, Brazilian digital challenger bank Nu Holdings, Poland's PKO Bank and Mexico's Regional

Sustainable Europe Equity Fund 8

FUND SIZE AS AT 30.04.2024 : EUR 214 MILLION

Manager's Overview

European equities rallied over the period, though there was some volatility along the way. Sentiment remained fragile amid elevated interest rates and geopolitical tensions. However, markets bounced back strongly towards the end of 2023 amid cooling inflation. The start of 2024 saw European equities supported by resilient economic and corporate data, as well as a number of dovish cues from major central banks. In April, markets responded negatively to speculation that central banks will not ease their monetary policies as quickly as previously hoped, given resilient growth and sticky inflation data. While the European Central Bank (ECB) maintained interest rates at record-high levels during its April meeting, officials indicated that a looser monetary policy would be appropriate if inflation continues to converge towards its 2% target. ECB President Christine Lagarde emphasised that the bank's future moves will be data-dependent rather than following a predetermined rate trajectory.

The fund generated positive returns but underperformed the index over the period, primarily due to the underweight positioning in industrials and the overweight exposure to health care. Stock selection across the consumer discretionary, energy, health care and financials sectors also detracted from returns. However, strong stock selection in communication services and utilities added value, while the overweight exposure to and stock picking in information technology (IT) was a source of strength. Not holding Novo Nordisk detracted significantly from relative returns as it reported better-than-expected fourth quarter operating profits. Dr. Martens was weak after it reported lacklustre results over the period and warned that its FY24 earnings will be at the lower end of consensus estimates. Some of these losses were offset by the exposure to Saint-Gobain. Its shares were strong after it released upbeat results for FY 2023 and the first quarter of 2024.

The fund leverages Fidelity's differentiated research capabilities and analysts' top ideas to deliver a concentrated portfolio that promotes sustainable characteristics with high stock-specific risk. The investment analysis integrates a wide range of environmental and social characteristics. The fund's largest overweight positions are currently in the IT and health care sectors, while the largest underweights are in consumer discretionary and energy.

Sustainable European Smaller Companies Fund 4,8

FUND SIZE AS AT 30.04.2024 : EUR 102 MILLION

Manager's Overview

European smaller equities rallied over the period, though there was some volatility along the way. Sentiment remained fragile amid elevated interest rates and geopolitical tensions. However, markets bounced back strongly towards the end of 2023 amid cooling inflation. The start of 2024 saw European equities supported by resilient economic and corporate data, as well as a number of dovish cues from major central banks. In April, markets responded negatively to speculation that central banks will not ease their monetary policies as quickly as previously hoped, given resilient growth and sticky inflation data. While the European Central Bank (ECB) maintained interest rates at record-high levels during its April meeting, officials indicated that a looser monetary policy would be appropriate if inflation continues to converge towards its 2% target. ECB President Christine Lagarde emphasised that the bank's future moves will be data-dependent rather than following a predetermined rate trajectory.

The fund delivered positive returns but underperformed the index during the review period. The weaker performance of consumer discretionary and industrials stocks weighed on returns. The fund's overweight allocation to consumer discretionary and lack of exposure to energy stocks also hampered relative performance. Encouragingly, security selection across the health care, communication services and consumer staples sectors, coupled with favourable positioning in health care (underweight) and communication services (overweight) drove returns. At a stock level, shares in Watches of Switzerland derated after it downgraded its annual revenue guidance, citing economic challenges and continued pressures on consumer spending, particularly in the luxury segment. Shares in AMS-Osram fell after Apple cancelled its anchor project supporting AMS-Osram's significant microLED investment, which removes a key long-term growth driver for the business. On a positive note, shares in consumer reviews website Trustpilot gained after it issued a solid trading update for FY23. Media group Schibsted benefited from reports of private equity interest in acquiring publicly traded Adevinta, in which Schibsted holds a

The managers are focused on identifying well-managed, cash generative companies that have clear market leadership, a sustainable competitive advantage, and profits driven by strong sales growth. The fund displays higher growth in sales and earnings, better balance sheet characteristics, and trades at slightly lower multiples than the index. Environmental, social and governance (ESG) considerations are integrated throughout the investment process. The use of Fidelity's proprietary ratings achieves broader ESG coverage than that provided by MSCI, as a proportion of the portfolio is invested outside the benchmark.

Sustainable Eurozone Equity Fund 9

FUND SIZE AS AT 30.04.2024 : EUR 528 MILLION

Manager's Overview

European equities rallied over the period, though there was some volatility along the way. Sentiment remained fragile amid elevated interest rates and geopolitical tensions. However, markets bounced back strongly towards the end of 2023 amid cooling inflation. The start of 2024 saw European equities supported by resilient economic and corporate data, as well as a number of dovish cues from major central banks. In April, markets responded negatively to speculation that central banks will not ease their monetary policies as quickly as previously hoped, given resilient growth and sticky inflation data. While the European Central Bank (ECB) maintained interest rates at record-high levels during its April meeting, officials indicated that a looser monetary policy would be appropriate if inflation continues to converge towards its 2% target. ECB President Christine Lagarde emphasised that the bank's future moves will be data-dependent rather than following a predetermined rate trajectory.

The fund delivered positive returns during the period but underperformed the comparative index. Stock selection within consumer discretionary and the overweight allocation to industrials held back gains. Returns from the allocation to information technology (IT) were mixed, as losses from stock selection were offset by the overweight exposure to the sector. Meanwhile, stock picking in health care proved rewarding. Banking group BBVA benefited as yields rerated. Its shares were further supported by better than expected earnings and cash returns. Shares in Novo Nordisk rose on upbeat fourth quarter results and strong demand for its weight loss drug Wegovy. Shares in Kering declined after the luxury goods giant issued a profit warning due to lower sales for its leading brand Gucci in its key Asian market. French technology services and consulting business Alten reported weaker-than-expected first quarter revenue and issued a cautious outlook for the first half of 2024, confirming the continued slowdown in IT services.

The range of economic outcomes appears to be narrowing, with less likelihood for a major recession. The ECB is likely to kick off its rate cutting cycle at its June meeting, followed by the Bank of England later in the year, while no rate cuts are expected from the US Federal Reserve in 2024. While the fund's core objective is to outperform the reference index, it has an additional focus on sustainability and aims to deliver sustainable positive societal impacts. The managers focus on companies with strong sustainability that also offer the best financial and non-financial performance potential.

Sustainable Future Connectivity Fund 4,8

FUND SIZE AS AT 30.04.2024 : USD 259 MILLION

Manager's Overview

Global equities rose over the period. Equity markets delivered muted performance in the first half of the period as inflation moderated but remained above target levels and led major central banks to continue to raise interest rates. Concerns around the debt ceiling and a rating downgrade for government debt in the US, along with geopolitical tensions in the Middle East also weighed on sentiment. Nevertheless, equities rallied strongly in the latter half of the period as central banks in major developed markets left policy rates unchanged. Furthermore, robust corporate earnings, resilient economic data and moderating inflationary pressure raised hopes for a soft landing (a slowdown in the global economy that does not cause a recession) and supported prospects for interest rate cuts in 2024. Against this global backdrop, equities in the US and Japan gained the most. Emerging markets also ended higher but lagged developed markets, due to sluggish economic growth in China. At a sector level, information technology (IT) and telecommunication companies rose strongly as the artificial intelligence (AI) theme supported investor sentiment

The fund underperformed the comparative index over the period, primarily due to stock selection in IT services, financial services and entertainment. Stock picking within semiconductors and software also hindered performance, but these losses were more than offset by the overweight stance in this sub sector. The lack of exposure to graphics processing unit producer Nvidia was the largest detractor from relative performance given the extremely strong results it has enjoyed, driven by large and mega-cap technology companies' investment in Al development. Shares in hearing aid manufacturer Sonova detracted from returns, given its weak product cycle during 2023 relative to its main competitors as well as its subdued first half results for fiscal year 2023/24. The manager sold the position in early April to fund better ideas elsewhere. Holdings in unlisted UK chip designer Graphcore and Sony Group also weighed on returns. On a positive note, positions in NXP Semiconductors and Uber Technologies added value, driven by their strong earnings results. The holding in chip maker Marvell Technology also benefited from strong Al/datacentre investment.

The Sustainable Future Connectivity universe has benefited from stronger growth than the broader market, and the fund aims to invest in companies with even better growth potential than the thematic universe. The fund exploits this theme with a deep understanding of underlying technologies, new business models and a global investment perspective. A focus on sustainability forms a key part of this process, particularly in digital ethics. The manager bought a new position in enterprise software company SAP SE, as BMW's move to its RISE platform should spur other large clients to look into the programme. The manager also bought a holding in IT company Accenture, as its scale and reputation should enable it to win more customers while expanding its margins. A position was also purchased in wireless network operator T-Mobile US, which is well placed to take market share in the rural and commercial customer segments. Meanwhile, the manager sold positions in Sonova and Adobe.

Sustainable Global Equity Fund 4,9

FUND SIZE AS AT 30.04.2024 : USD 6 MILLION

Manager's Overview

Global equities rose over the 12-month period to April 2024. Equity markets delivered muted performance over the first half of the period as inflation moderated but remained above target levels and led major central banks to continue to raise interest rates. Concerns around the debt ceiling and a rating downgrade for government debt in the US, along with geopolitical tensions in the Middle East also weighed on sentiment. Nevertheless, equities rallied strongly in the latter half of the period as central banks in major developed markets left policy rates unchanged. Furthermore, robust corporate earnings, resilient economic data and moderating inflationary pressure raised hopes for a soft landing and supported prospects for interest rate cuts in 2024.

The fund delivered positive returns but underperformed the comparative index over the period, against a difficult backdrop for sustainable investing. Markets were dominated by the strong performance of a narrow cohort of expensive growth-oriented mega-cap names. Since some of these stocks, such as NVIDIA and Amazon, do not meet the fund's sustainable investment criteria, the positioning in these stocks held back gains. A recalibration of rates expectations against a generally higher inflationary backdrop impacted a number of the fund's utilities holdings, including NextEra Energy and SSE. Nevertheless, NextEra maintains a leading position in the industry with a premier renewable business offering and strong fundamentals. SSE is also actively driving the energy transition of its generation portfolio, through announcements of coal plant closures and targets for a trebling of renewables. On a positive note, cloud computing company Nutanix was a key contributor to returns on the back of a series of strong quarterly results. Robust earnings from conviction holdings in the health care sector such as ICON and medical device maker Boston Scientific also added value.

The portfolio management team's investment approach focuses on companies that enable the transition to a sustainable economy and make a contribution to the United Nation's Sustainable Development Goals (SDGs). In essence, the companies addressing the greatest environmental and social challenges with positive contribution to UN SDGs stand to earn higher and more durable returns over time. These quality franchises have favourable environmental, social and governance (ESG) characteristics, attractive financial fundamentals and/or sustainable or improving returns on invested capital, good management with aligned incentives and compelling valuations.

Sustainable Healthcare Fund 8

FUND SIZE AS AT 30.04.2024 : EUR 1,578 MILLION

Manager's Overview

Global equities rose over the 12 months to 30 April 2024. Equity markets delivered muted performance over the first half of the period, but rallied strongly in the latter half as central banks in major developed markets kept interest rates steady. Furthermore, robust corporate earnings, resilient economic data and moderating inflationary pressures raised hopes for a soft landing, supporting prospects for interest rate cuts in 2024. Against this global backdrop, US and Japanese equities led global equity markets. Emerging markets rose but lagged developed markets due to sluggish economic growth in China. The MSCI ACWI Healthcare Index underperformed the broader MSCI ACWI Index. From a sub-sector perspective, pharmaceuticals fared better than the broader health care index. In contrast, health care technology underperformed.

The fund outperformed its comparative index over the period. At the sub-sector level, stock picking in life sciences tools & services, pharmaceuticals, health care equipment & supplies contributed to performance. Both stock selection and the underweight allocation to biotechnology also added relative value, while security selection in health care providers & services and household durables hampered returns. At the stock level, shares in clinical research organisations ICON and IQVIA advanced, supported by their strong quarterly results. The holding in medical technology company Boston Scientific rose during the second half of the period, driven by a combination of positive news flow regarding its product pipeline and better-than-expected quarterly results, as well as an increase in its earnings per share (EPS) guidance for the year. Conversely, health insurer Humana's shares fell as the federal Medicare Advantage rate proposal for 2025 was lower than expected and a blow to the insurance industry's Medicare businesses. Shares in sleep apnoea equipment manufacturer Resmed slumped following fourth-quarter results, with in-line revenues but a miss on its EPS. Swiss hearing aid maker Sonova fell after UBS downgraded its stock rating to 'sell' from 'neutral' on increasing competition.

Health care companies tend to be defensive, as demand for drugs and medical procedures will not change even in times of volatility and uncertainty. The fund invests in high-quality companies set to benefit from long-term structural growth drivers within health care—the ageing population and increased health care needs. The fund is overweight in the life sciences tools and services subsector, given its attractive growth opportunities. The manager remains selective and underweight in pharmaceuticals due to concerns over the longer-term growth profile of companies facing material patent cliffs in the coming years. During the period, the manager initiated a position in Becton Dickinson, a diversified medical supply, devices, diagnostics and research tools business. The company has a dominant share across most end markets and is a good defensive stock. The manager increased the exposure to managed care company Humana, which is likely to experience accelerating earnings and EPS growth into 2025. The position in Danaher was sold.

Sustainable Japan Equity Fund 8

FUND SIZE AS AT 30.04.2024 : JPY 53,309 MILLION

Manager's Overview

The Japanese equity market rose during the period as extended buying by overseas investors drove share price gains. Market participants were encouraged by a steady stream of corporate governance related developments, spurred by reform measures from the Tokyo Stock Exchange and largely positive domestic earnings. In March, the Bank of Japan (BoJ) announced its decision to end its negative interest rate policy and eliminate yield curve controls. This was the first move to tighten the monetary policy in Japan in nearly two decades. From now on, the BoJ's primary policy tool will be short-term interest rates, which it aims to keep at around 0–0.1%. The lifting of unconventional easing measures was interpreted as a dovish hike and the yen subsequently fell to a 34-year low against the US dollar. Value stocks outperformed growth names over the period. All sectors ended the 12-month period with positive returns, with financials, energy and real estate leading the way.

The fund recorded strong absolute returns but underperformed the comparative index over the year. The underweight stance in the transportation equipment segment and stock selection in the foods sector held back gains, while security selection in the electric appliances sector added value. At a stock level, shares in MISUMI Group, a leading supplier of factory automation components, fell as recent monthly sales trends underscored the gradual pace of recovery in the order cycle. However, leading indicators such as machine tool orders bottomed out, and earnings are expected to recover in 2024. The holding in Yakult Honsha also detracted from returns. The leading maker of fermented lactic drinks faced selling pressure as a slow recovery in sales volumes overseas, notably in China and Indonesia, clouded the strong performance of its domestic business. Nevertheless, the company's new medium-term business plan points towards improvements in corporate governance and capital efficiency. On a positive note, the position in insurer Tokio Marine advanced, supported by heightened expectations for an accelerated reduction in cross shareholdings. Shares in semiconductor production equipment maker Tokyo Electron rose amid an improving outlook for the memory market and associated capital expenditure demand. Conglomerate Hitachi was another notable contributor to performance, supported by strong earnings growth and positive guidance for the next year.

The fund focuses on quality companies with enhanced sustainable characteristics and those that can improve their environmental, social and governance credentials through active engagement. Among the largest sector positions are electric appliances, retail and chemicals, where high-quality sustainable growth companies are held. ITOCHU, Tokio Marine and Hitachi remain key active positions in the portfolio.

Sustainable US Equity Fund 9

FUND SIZE AS AT 30.04.2024 : USD 87 MILLION

Manager's Overview

US equities rose over the period. Markets started on a cautious note due to concerns around the debt ceiling, which was resolved in June, when the US Senate approved the debt ceiling bill to avoid a default on federal government debt. Surging oil prices, rising bond yields and concerns over a government shutdown triggered a sell-off towards the end of the third quarter. However, markets rebounded strongly in November. Investor sentiment was bolstered by expectations for rate cuts in 20204 as central banks appeared to have reached the peak of their interest rate tightening cycles. 2024 started on a weak note as the technology-based Magnificent Seven stocks (Microsoft, Apple, Nvidia, Alphabet, Tesla, Meta Platforms and Amazon) faltered following strong performance during the fourth quarter. Nevertheless, hopes for interest rate cuts and a strong start to earnings season drove markets to record highs by the end of the first quarter of 2024. Against this backdrop, all sectors except real estate rallied, with communication services, information technology (IT) and financials rising the most.

The fund generated strong positive returns but underperformed the comparative index over the period, against a difficult backdrop for sustainable investing. The underweight stance in communication services and stock selection in financials detracted from relative performance, while stock selection in consumer staples and software added value. The underweight allocation to Nvidia and Alphabet and lack of exposure to Meta Platforms detracted from relative performance as these companies benefited from investor excitement around artificial intelligence (AI). Automotive technology company Aptiv's shares declined after it pushed back its guidance for 2025 by a year, due to headwinds related to labour costs and the Mexican peso. On a positive note, Vital Farms, a pastureraised egg company that benefits from positive catalysts such as falling commodity input costs, improved volumes and a helpful pricing environment added value. Cloud computing company Nutanix rose after it announced strong quarterly results. The lack of exposure to Apple supported relative returns. Apple revealed strong demand for iPhones in the US and Europe; however, weakness in the Chinese market disappointed investors.

The managers' investment approach focuses on US companies that enable the transition to a sustainable economy and contribute to the United Nation's Sustainable Development Goals. These companies stand to earn higher and more durable returns over time. The managers bought a new position in data analytics company Informatica. Informatica's 'Intelligent Data Management Cloud' software is a critical component for enterprises that are looking to cleanse their data architecture to maximise the opportunities of Al. In addition to revamping its product portfolio, Informatica has achieved a transformation in its business model, and now has over 90% recurring revenues, which bodes well for the future. Positions in Amazon.com and Thermo Fisher Scientific were sold.

Sustainable Water & Waste Fund 8

FUND SIZE AS AT 30.04.2024 : USD 1,322 MILLION

Manager's Overview

Global equities rose over the 12-month period to April 2024. Equity markets delivered muted performance over the first half of the period as inflation moderated but remained above target levels and led major central banks to continue to raise interest rates. Equities in the US and Japan gained the most. Emerging markets also ended higher but lagged developed markets, due to sluggish economic growth in China. At a sector level, information technology and communication services companies rose strongly as the artificial intelligence theme supported investor sentiment.

The fund underperformed the comparative index over the review period. The overweight exposure to utilities held back gains. The position in US-based water utility American Water Works weighed on returns due to uncertainty around fair market value (FMV) legislation in Pennsylvania, a major market for the firm. The legislation's repeal might hamper the company's acquisition plans within the state and negatively impact its planned deals and projections. The lack of exposure to the 'Magnificent 7' stocks (Nvidia, Apple, Microsoft, Alphabet, Meta, Amazon, and Tesla) detracted significantly from relative returns given the strong performance of these names amid the broad rotation back into technology over the period. Due to the portfolio managers' focus on thematic purity related to water and waste exposure, these stocks are not part of the investable universe. On a positive note, the position in Ebara, one of the world's largest industrial pumps and turbine manufacturers, outperformed as its FY2023 reported sales and orders figures were above estimates. Ebara's products and services include industrial pumps and turbines that are essential for water utilities and networks, as well as waste management solutions.

The portfolio managers look to maintain a high purity thematic fund, which seeks to deliver long-term capital growth and contribute to the sustainability of global water and waste practices. The fund is balanced across both the water and waste sectors as a result of bottom-up stock selection. The managers believe the water and waste management sectors are driven by long-term megatrends. These include urbanisation and population growth, growing consumption, an ageing infrastructure, climate change and responsible resource consumption.

Switzerland Fund 8

FUND SIZE AS AT 30.04.2024 : CHF 233 MILLION

Manager's Overview

Swiss equities rallied over the period, though there was some volatility along the way. Sentiment remained fragile amid elevated interest rates and geopolitical tensions. However, markets bounced back strongly towards the end of 2023 amid cooling inflation. The start of 2024 saw European equities supported by resilient economic and corporate data, as well as a number of dovish cues from major central banks. In April, markets responded negatively to speculation that central banks will not ease their monetary policies as quickly as previously hoped, given resilient growth and sticky inflation data. While the European Central Bank (ECB) maintained interest rates at record-high levels during its April meeting, officials indicated that a looser monetary policy would be appropriate if inflation continues to converge towards its 2% target. ECB President Christine Lagarde emphasised that the bank's future moves will be data-dependent rather than following a predetermined rate trajectory.

The fund underperformed the index over the review period, driven by weak stock picking in industrials, health care and information technology (IT), while unfavourable positioning in materials and IT also held back gains. However, stock picking in and positioning within the consumer staples (underweight) and financials (overweight) sectors added notable value. At a stock level, the bias against UBS weighed on relative returns after it reported strong results for the second and third quarter of 2023. Shares in ams-OSRAM plummeted after it cancelled its microLED project in February 2024. Conversely, the structural underweight in Nestlé added relative value. Its shares declined after it reported weaker-than-expected FY 2023 results and warned of slower sales growth for FY 2024. Partners Group rose after it reported better-than-expected growth in assets under management for the first half of 2023 and reiterated its annual outlook.

The fund continues to focus on companies with high quality business models and management teams. It maintains a sizable allocation to the health care, financials, consumer staples and industrials sectors in absolute terms. Relative to the index, the fund has an underweight stance in the consumer and health care sectors, and is overweight in financials, industrials and materials.

Thailand Fund 8

FUND SIZE AS AT 30.04.2024 : USD 131 MILLION

Manager's Overview

Thai equities declined over the year due to a number of factors, including political uncertainty that added to market volatility, a slow recovery in tourism, weak economic growth and delays in government budgets and stimulus measures. All sectors except energy ended in negative territory, with utilities, materials and consumer discretionary among the key laggards.

The fund posted negative returns and underperformed the index over the review period. Security selection in consumer staples, financials and real estate held back gains. In consumer staples, Asian Sea Corporation (food processing) declined. Within financials, the lack of exposure to TMBThanachart Bank and the underweight stance in Kasikornbank proved unfavourable as share prices of both these companies advanced during the period. In real estate, the position in Land and Houses traded lower. Encouragingly, robust stock picking in information technology (IT) and the underweight holding in utilities added value. Among IT, US-listed Fabrinet and Taiwan-based Delta Electronics enhanced gains. In utilities, not holding Energy Absolute supported relative performance as its share price fell.

Sui Chuan Yeo assumed portfolio management responsibilities for the FF Thailand Fund with effect from 29 February 2024. Sui Chuan's investment style and approach is very similar to the previous manager Madeleine Kuang. He has realigned the portfolio based on where he is finding investment opportunities with minimum turnover. The fund employs a fundamental, bottomup driven investment approach, supported by stock selection, industry analysis and sustainability assessment. The focus is on identifying mispriced opportunities with attractive risk-reward profiles. The fund is currently overweight in the consumer discretionary, real estate, health care and industrials sectors due to the alpha potential in these areas. Within health care, key overweight positions are in hospitals such as Bangkok Dusit Medic and Chularat Hospital. Notably, convenience chain store operator CP All is held for the robust growth prospects of its 7-11 business, as well as its dominant scale and impressive returns profile.

UK Special Situations Fund

FUND SIZE AS AT 30.04.2024 : GBP 88 MILLION

Manager's Overview

UK equities rose during the period, despite a slew of challenges including persistent recessionary fears and monetary policy tightening. Geopolitical events also remained in focus, following the escalating conflict between Israel and Palestine, which started in October. Meanwhile, the UK grappled with some of the highest inflation in developed markets, prompting the Bank of England (BoE) to aggressively raise rates to 5.25%, pushing borrowing costs to levels last seen in 2008. However, in late October, the market narrative swiftly began to turn. Decelerating inflationary pressures allowed the BoE to keep interest rates unchanged at recent meetings after 14 successive rate hikes. This led investors to believe that we may be approaching the peak of interest rate increases, while positive data surprises increased conviction in the soft-landing narrative, providing a tailwind for equities. This sentiment gained further momentum in March, after BoE Governor Andrew Bailey hinted that the UK economy was progressing to the point where the central bank may start cutting interest rates.

The fund recorded positive returns and outperformed the comparative index over the year. Stock selection in the industrials and financials sectors contributed to returns, while the underweight stance in consumer staples added relative value. Security selection in the energy sector held back gains. The position in defence contractor Babcock International performed strongly. Its shares were supported by a positive outlook on the back of strong order intake and achievable organic targets driven by a growing base of core work where Babcock has strong visibility, growing defence budgets, new international and adjacent opportunities and business repositioning, as well as a relatively undemanding valuation. The holding in London-based geotechnical engineering group Keller also added value after it reported solid progress in its latest fiscal year, with a modest revenue increase and a large rise in earnings. Resilient prices at its North American business Suncoast Post-Tension, and strong performances from infrastructure projects in Australia more than offset weak project and business performance in Europe. Within financials, the holding in Irish lender AIB Group rose after it announced plans to boost shareholder returns more than four-fold after higher interest rates helped the bank to more than double its full-year after-tax profit and lift profitability targets. On the downside, the holding in Swiss pharmaceuticals group Roche was weighed down by its modest 2024 outlook. Nevertheless, the recent downgrades appear to be in the past and the company has a mature portfolio with limited near-term risks, while its growth outlook is expected to become more stable.

While economic and geopolitical uncertainty is likely to continue, UK valuations compared to historical averages and other markets - and the large divergence in performance between different parts of the market - means there are attractive opportunities in UK stocks on a three-to-five-year view. Their unloved status means that the managers not only continue to find overlooked companies with good upside potential across industries and the market cap spectrum, but they also do not have to compromise on quality.

World Fund 8

FUND SIZE AS AT 30.04.2024 : USD 5,358 MILLION

Manager's Overview

Developed market equities rose over the 12-month period to April 2024. Equity markets delivered muted performance over the first half as inflation moderated but remained above target levels and led major central banks to continue to raise interest rates. Concerns around the debt ceiling and a rating downgrade for government debt in the US, along with geopolitical tensions in the Middle East also weighed on sentiment. Nevertheless, equities rallied strongly in the latter half of the period as central banks in major developed markets left policy rates unchanged. Furthermore, robust corporate earnings, resilient economic data and moderating inflationary pressure raised hopes for a soft landing and supported prospects for interest rate cuts in 2024. Against this global backdrop, equities in the US and Japan gained the most.

The fund delivered positive returns but marginally underperformed the index over the period. Certain holdings in the financials sector came under pressure, while stock picking in consumer discretionary proved rewarding. At a stock level, not owning expensive stocks such as fast-growing semiconductor company Nvidia and Meta Platforms weighed on relative returns. Although Prudential delivered an inline set of FY23 results, the market was disappointed by the lack of capital returns as management prioritised organic growth opportunities. Biopharmaceutical contract manufacturer Lonza Group fell as it lowered its revenue guidance for 2024. The position was subsequently sold.

The managers look for businesses with the potential for absolute share price appreciation and a change or catalyst to realise that appreciation. At a sector level, health care remains a significant overweight position with defensive growth opportunities, as it combines reasonable valuation levels with resilience during economic downturns. The financials exposure is a combination of highquality banking franchises with strong balance sheets, credit quality and prudent underwriting practices; insurers with robust pricing power; exchange operators and payment services providers. The fund has an overweight stance in the utilities sector. Within the information technology (IT) sector, the exposure is spread across a number of semiconductor holdings, software majors, technology conglomerates and technology hardware & equipment makers.

Asia Pacific Dividend Fund 8

FUND SIZE AS AT 30.04.2024 : USD 332 MILLION

Manager's Overview

Regional equities advanced over the year. The period started on a positive note amid expectations of policy support from China. However, subdued macroeconomic data releases and renewed stress on the financials and real estate sectors in China capped gains in the latter part of the period. Against this backdrop, Chinese and Hong Kong equities slid. Information technology (IT) focused markets with exposure to the US, including Taiwanese and South Korean stocks, gained amid optimism towards artificial intelligence (AI) and memory demand. Australian equities also delivered robust performance.

The fund underperformed the comparative index over the year. The broadbased weakness in the Chinese equity market weighed on preferred holdings in ENN Energy and China Yongda Automóbiles Services. Hong Kong-based AIA Group was also at the receiving end of investor disdain towards China, even though its value of new business continued to improve and its growth in the broader Asian market remained healthy. Investor sentiment towards Thai Beverage was subdued as it reported underwhelming sales volumes. The position in electronics manufacturer Chicony Electronics advanced amid expectations of higher earnings given hopes of a strong PC market recovery. Market preference for South Korea's value stocks amid the government's Corporate Value Up Program (CVP) supported shares in insurance company Samsung Fire & Marine Insurance.

The manager looks for companies with strong business moats and credible capital allocation policies, which should offer investors compounding returns and dividend payments. The preference is towards companies with a sustainable dividend stream that are supported by strong balance sheets and predictable cash flows. Swire Pacific is preferred for its diversified interest in property investment and development, aviation, industrial activities and marine services. It has a strong balance sheet and an encouraging dividend policy. China Yangtze Power is another preferred holding. It is the largest global hydropower utility with a strong balance sheet and stable dividend policy.

European Dividend Fund 8

FUND SIZE AS AT 30.04.2024 : EUR 494 MILLION

Manager's Overview

European equities rallied over the period, though there was some volatility along the way. Sentiment remained fragile amid elevated interest rates and geopolitical tensions. However, markets bounced back strongly towards the end of 2023 amid cooling inflation. The start of 2024 saw European equities supported by resilient economic and corporate data, as well as a number of dovish cues from major central banks. In April, markets responded negatively to speculation that central banks will not ease their monetary policies as quickly as previously hoped, given resilient growth and sticky inflation data. While the European Central Bank (ECB) maintained interest rates at record-high levels during its April meeting, officials indicated that a looser monetary policy would be appropriate if inflation continues to converge towards its 2% target. ECB President Christine Lagarde emphasised that the bank's future moves will be data-dependent rather than following a predetermined rate trajectory.

The fund outperformed the comparative index over the period. Robust security selection in the financials sector proved rewarding, while the underweight stance in the technology sector weighed on returns. At a stock level, private equity company 3i Group rallied, driven by the robust performance of one of its key investments in discount retailer Action and higher margin guidance. Italian banking group UniCredit added value on the back of higher net interest income (NII), with strong performance across segments. Certain insurance stocks such as Hannover Rueckversicherungs performed well, with the economic outlook remaining relatively positive and the rate environment providing longer term support. In contrast, Reckitt Benckiser Group fell on disappointing quarterly results, driven by low sales volumes and higher marketing and innovation expenses. The lack of exposure to lithography tools supplier ASML Holding also weighed on relative returns.

The fund is defensively positioned. At a sector level, the manager retains a longstanding overweight in financials, where high quality stocks, primarily in the insurance, banks and financial services space, are well represented. The fund has an overweight allocation to industrials, with a focus on capital goods companies such as Epiroc and Ferrovial, and information services companies RELX and Wolters Kluwer. Other large absolute sector positions are in health care, consumer staples and utilities. These are more classically 'defensive' businesses where the manager looks for diversified companies that operate in strong end markets. Meanwhile, the portfolio retains an underweight stance in the information technology and consumer discretionary sectors, where valuations are stretched and where there are fewer opportunities that meet the fund's strict investment criteria.

Global Dividend Fund 8

FUND SIZE AS AT 30.04.2024 : USD 12,089 MILLION

Manager's Overview

Global equities rose over the 12-month period to April 2024. Equity markets delivered muted performance over the first half as inflation moderated but remained above target levels and led major central banks to continue to raise interest rates. Concerns around the debt ceiling and a rating downgrade for government debt in the US, along with geopolitical tensions in the Middle East also weighed on sentiment. Nevertheless, equities rallied strongly in the latter half of the period as central banks in major developed markets left policy rates unchanged. Furthermore, robust corporate earnings, resilient economic data and moderating inflationary pressure raised hopes for a soft landing and supported prospects for interest rate cuts in 2024. Against this global backdrop, equities in the US and Japan gained the most.

The fund delivered positive returns but underperformed the comparative index over the period, due to its permanent defensive bias. Sector allocation was the key detractor from performance, primarily due to the lack of exposure to growth orientated US mega-caps that are viewed as artificial intelligence (AI) beneficiaries, including Nvidia and some other mega-cap technology stocks. The manager's valuation discipline and the little to no dividends paid by these businesses make them unsuitable for the fund's dividend-based total return approach. Meanwhile, Roche reported underwhelming FY23 results that slightly missed expectations at the top-line but reported in-line earnings.

The portfolio remains defensively positioned. The manager maintains a strong quality bias and owns predominantly defensive business models with robust balance sheets at attractive valuations. From a sector perspective, the fund has key holdings in the consumer staples, non-life insurance, financial exchanges, pharmaceuticals and other sectors with limited correlation to economic growth. In the more cyclical parts of the market, the fund holds a number of mature businesses in the technology space (particularly in the semiconductor and hardware industries) that meet its investment criteria. The manager also has positions in high-quality industrials businesses.

Global Equity Income Fund 4,8

FUND SIZE AS AT 30.04.2024 : USD 260 MILLION

Manager's Overview

Global equities rose over the 12-month period to April 2024. Equity markets delivered muted performance over the first half as inflation moderated but remained above target levels and led major central banks to continue to raise interest rates. Concerns around the debt ceiling and a rating downgrade for government debt in the US, along with geopolitical tensions in the Middle East also weighed on sentiment. Nevertheless, equities rallied strongly in the latter half of the period as central banks in major developed markets left policy rates unchanged. Furthermore, robust corporate earnings, resilient economic data and moderating inflationary pressure raised hopes for a soft landing and supported prospects for interest rate cuts in 2024. Against this global backdrop, equities in the US and Japan gained the most.

The fund delivered positive returns but underperformed the comparative index over the period due to its permanent defensive bias. Security selection proved to be a headwind, particularly in the information technology sector, with losses coming primarily from the lack of exposure to growth orientated US mega-caps that are viewed as artificial intelligence (AI) beneficiaries, including Nvidia and some other mega-cap technology stocks. The manager's valuation discipline and the little to no dividends paid by these businesses make them unsuitable for the fund's dividend-based total return approach. Meanwhile, Roche reported underwhelming FY23 results that slightly missed expectations at the top-line but reported in-line earnings.

Regional and sector weightings are an outcome of the strategy's bottom-up approach to stock selection. The portfolio is well diversified on both counts with a clear defensive tilt as a result of the strategy's focus on companies with resilient returns and strong balance sheets. The largest absolute and relative sector weighting is to financials. However, holdings within the sector are typically higher quality, defensive, long-term compounding businesses with low balance sheet risk. The manager finds attractive opportunities in non-life insurance companies and financial exchanges. Industrials is another significant overweight. The exposure to the technology sector is made up of technology

Sustainable European Dividend Plus Fund 4,8

FUND SIZE AS AT 30.04.2024 : EUR 6 MILLION

Manager's Overview

European equities rallied over the period, though there was some volatility along the way. Sentiment remained fragile amid elevated interest rates and geopolitical tensions. However, markets bounced back strongly towards the end of 2023 amid cooling inflation. The start of 2024 saw European equities supported by resilient economic and corporate data, as well as a number of dovish cues from major central banks. In April, markets responded negatively to speculation that central banks will not ease their monetary policies as quickly as previously hoped, given resilient growth and sticky inflation data. While the European Central Bank (ECB) maintained interest rates at record-high levels during its April meeting, officials indicated that a looser monetary policy would be appropriate if inflation continues to converge towards its 2% target. ECB President Christine Lagarde emphasised that the bank's future moves will be data-dependent rather than following a predetermined rate trajectory.

The fund underperformed the comparative index over the period. At a sector level, the overweight stance within communication services held back gains, while robust security selection within financials proved rewarding. At a stock level, telecommunications and digital services provider Elisa rose as MSR (mobile service revenue) continues to perform well driven by speed-based upselling. Reckitt Benckiser Group fell on disappointing quarterly results, driven by low sales volumes and higher marketing and innovation expenses. The lack of exposure to lithography tools supplier ASML Holding also weighed on relative returns. Conversely, private equity company 3i Group rallied, driven by the robust performance of one if its key investments in discount retailer Action and higher margin guidance. UniCredit added value on the back of higher net interest income (NII), with strong performance across segments.

The fund is defensively positioned. At a sector level, the manager retains a longstanding overweight in financials, where high quality stocks, primarily in the insurance, banks and financial services space, are well represented. The fund has an overweight allocation to industrials, with a focus on capital goods companies such as Epiroc and Ferrovial, and information services companies RELX and Wolters Kluwer. Other large absolute sector positions are in health care, consumer staples and utilities. These are more classically 'defensive' businesses where the manager looks for diversified companies that operate in strong end markets. Meanwhile, the portfolio retains an underweight stance in the information technology and consumer discretionary sectors, where valuations are stretched and were there are fewer opportunities that meet the fund's strict investment criteria.

Sustainable Global Dividend Plus Fund 8

FUND SIZE AS AT 30.04.2024 : USD 376 MILLION

Manager's Overview

Global equities rose over the 12-month period to April 2024. Equity markets delivered muted performance in the first half of the period as inflation moderated but remained above target levels and led major central banks to continue to raise interest rates. However, markets rallied strongly in the latter half of the period as central banks in major developed markets left policy rates unchanged. Furthermore, robust corporate earnings, resilient economic data and moderating inflationary pressures raised hopes for a soft landing. Against this global backdrop, equities in the US and Japan gained the most. The S&P $\,$ Global US manufacturing Purchasing Managers' Index (PMI) fell to 50.0 in April, lower than the reading of 51.9 in March and below expectations of 52.0. Manufacturers scaled back purchasing activity given a fresh decline in new orders.

The fund underperformed the comparative index during the period. At a sector level, security selection within health care held back gains, while the exposure to the financials sector proved rewarding. At a stock level, not holding Nvidia weighed on relative returns. Roche Holding reported underwhelming FY23 results that slightly missed top-line expectations but reported in-line earnings. Consumer goods company Reckitt Benckiser Group remained under pressure, following a negative ruling in a lawsuit over its baby formula products. Encouragingly, private equity company 3i Group contributed to returns, driven by the robust performance of one of its key investments in discount retailer Action and higher margin guidance. Taiwan Semiconductor rallied along with the broader semiconductor industry on the back of increased optimism surrounding artificial intelligence (AI).

The fund aims to achieve income with the potential for some capital growth. The income of the portfolio is enhanced using an overwrite strategy, whereby call options are written on holdings in the portfolio. Regional and sector weightings are an outcome of the strategy's bottom-up approach to stock selection. Each stock is held for its balance of sustainability, quality, valuation and income attributes. The portfolio is well diversified from a regional and sector perspective, with a clear defensive tilt as a result of the strategy's focus on companies with resilient returns and strong balance sheets.

Sustainable Global Equity Income Fund 4,8

FUND SIZE AS AT 30.04.2024 : USD 981 MILLION

Manager's Overview

Global equities rose over the 12-month period to April 2024. Equity markets delivered muted performance over the first half as inflation moderated but remained above target levels and led major central banks to continue to raise interest rates. Concerns around the debt ceiling and a rating downgrade for government debt in the US, along with geopolitical tensions in the Middle East also weighed on sentiment. Nevertheless, equities rallied strongly in the latter half of the period as central banks in major developed markets left policy rates unchanged. Furthermore, robust corporate earnings, resilient economic data and moderating inflationary pressure raised hopes for a soft landing and supported prospects for interest rate cuts in 2024. Against this global backdrop, equities in the US and Japan gained the most.

The fund delivered positive returns but underperformed the index over the period, due to its permanent defensive bias. Security selection proved to be a headwind, particularly in the information technology sector, primarily due to the lack of exposure to owning growth orientated US mega-caps that are viewed as artificial intelligence (Al) beneficiaries, including Nvidia and some other mega-cap technology stocks. The manager's valuation discipline and the little to no dividends paid by these businesses make them unsuitable for the fund's dividend-based total return approach. Meanwhile, Roche reported underwhelming FY23 results that slightly missed expectations at the top-line but reported in-line earnings.

The fund focusses on sustainable businesses with strong environmental, social and governance (ESG) characteristics. Regional and sector weightings are an outcome of the strategy's bottom-up approach to stock selection. The portfolio is well diversified on both counts with a clear defensive tilt as a result of the strategy's focus on companies with resilient returns and strong balance sheets. The largest absolute and relative sector weighting is to financials. However, holdings within the sector are typically higher quality, defensive, long-term compounding businesses with low balance sheet risk. The manager finds attractive opportunities in non-life insurance companies and financial exchanges. Industrials is another significant overweight. The exposure to the technology sector is made up of technology hardware and software companies.

Strategic European Fund ⁴

FUND SIZE AS AT 30.04.2024 : EUR 4 MILLION

Manager's Overview

European equities rallied over the period, though there was some volatility along the way. Sentiment remained fragile amid elevated interest rates and geopolitical tensions. However, markets bounced back strongly towards the end of 2023 amid cooling inflation. The start of 2024 saw European equities supported by resilient economic and corporate data, as well as a number of dovish cues from major central banks. In April, markets responded negatively to speculation that central banks will not ease their monetary policies as quickly as previously hoped, given resilient growth and sticky inflation data. While the European Central Bank (ECB) maintained interest rates at record-high levels during its April meeting, officials indicated that a looser monetary policy would be appropriate if inflation continues to converge towards its 2% target. ECB President Christine Lagarde emphasised that the bank's future moves will be data-dependent rather than following a predetermined rate trajectory.

The fund underperformed the comparative index over the review period. The exposure to long-only European equities contributed to absolute returns, while the market neutral portfolio also supported performance. On an absolute basis, positions in Associated British Foods, Inditex, Vonovia and NatWest Group in the long-only European equity allocation enhanced gains, while holdings in Reckitt Benckiser and Prudential were among the largest detractors from returns.

The fund offers exposure to European equity markets through a selection of up to 30 high conviction ideas and aims to deliver lower expected volatility than European equity indices. It does this by excluding the lowest quality, more volatile quintiles of businesses, as well as good quality businesses trading on unusually expensive valuations. The fund also measures volatility adjusted expected returns with the 10% hurdle rate required over 3-5 years to keep volatility under control. This reduces equity exposure when the balance of risk/reward on individual stocks deteriorates. By switching alpha generation to a portfolio of analyst long/short ratings (removing beta), the managers aim to reduce the risk of significant portfolio declines during market drawdowns. The fund's biggest sector exposures are to consumer staples, health care and

Asia Pacific Multi Asset Growth & Income Fund 1,4

FUND SIZE AS AT 30.04.2024 : USD 64 MILLION

Manager's Overview

Equities in the Pacific ex Japan region advanced over the 12-month period ending April 2024. Expectations of policy support from China supported sentiment, but gains were partially offset by subdued macroeconomic data releases and renewed stress on the financials and real estate sectors. Indian equities rallied due to strong economic growth, while Japanese equities rose due to extended buying by overseas investors on the back of corporate governance related developments. Within fixed income, US dollar denominated Asian investment grade and high yield bonds rose as spreads tightened.

The fund delivered income in line with its objective but posted marginally negative returns over the period. The allocation to Asian equities supported performance. Tactical positions in financials, Japan and India also added significant value. The allocation to Asian investment grade and high yield bonds benefited from the positive sentiment around targeted measures by Chinese policymakers to stimulate the economy. Chinese equities weighed on returns due to growth concerns, while infrastructure equities were negatively impacted by rising yields over the period.

Asia experienced cheap valuations and negative sentiment against a backdrop of lower inflation and a more accommodative monetary policy. Over the year, the exposure to US Treasuries was sold and the position in Asian investment grade and high yield bonds was reduced. Instead, due to the managers' preference for idiosyncratic emerging market rates, a holding was added in Asian local currency bonds. Within equities, the exposure to Asian and Chinese equities was reduced in light of China's sluggish recovery. The managers also sold their exposure to Chinese real estate and Japanese financials. Instead, they bought holdings in Japanese equities, which are likely to benefit from corporate reforms and a weak yen, and Taiwanese equities given the positive outlook driven by the artificial intelligence theme. Within alternatives, they consolidated holdings into higher conviction names and added positions in gold miners and in a volatility strategy.

European Multi Asset Income Fund 8

FUND SIZE AS AT 30.04.2024 : EUR 432 MILLION

Manager's Overview

European equities and bonds delivered positive returns over the period. Sentiment remained fragile amid elevated interest rates and geopolitical tensions. However, markets bounced back strongly towards the end of 2023 amid cooling inflation. At the start of 2024, the market was supported by resilient economic and corporate data, as well as a number of dovish cues from major central banks.

The fund distributed income in line with its objective and generated positive returns over the period. The exposure to European high yield and investment grade bonds contributed to performance as credit spreads tightened. The allocation to hybrid and local currency bonds, along with structured credit strategies also enhanced gains. As European markets had an upbeat momentum, the exposure to equities acted as a tailwind. However, this was partially offset by the exposure to renewable energy and social infrastructure holdings.

Given that markets are likely to be more resilient in the near term, the managers are happy to take more risk on a tactical basis. There is a preference for equities as a liquid and high-quality way to add beta. Meanwhile, they remain cautious on high-risk credit. They also have a cautious stance towards duration assets. Over the year, given inflationary pressures, the managers reduced interest rate risk in the portfolio by lowering the exposure to investment grade bonds, while adding to the German duration hedge. They added to Italian and Spanish government bonds for their strong fundamentals and dovish stance by the European Central Bank (ECB). The exposure to European high yield bonds was also reduced given the managers' cautious stance. Within equities, positions in European quality shares were sold. The proceeds were rotated into European dividend stocks for their high quality, stable income and defensiveness. The managers sold positions in European energy and UK equities on account of reduced conviction. Meanwhile, the alternatives exposure was trimmed, while some structured credit, infrastructure and other growth equities were sold.

Global Multi Asset Defensive Fund 4

FUND SIZE AS AT 30.04.2024 : EUR 49 MILLION

Manager's Overview

Global equities rose over the 12-month period to April 2024. Markets delivered muted performance over the first half of the period due to aggressive monetary policies to curb inflation. Concerns around the debt ceiling and the US government debt's rating downgrade, along with geopolitical tensions in the Middle East also weighed on sentiment. Nevertheless, equities rallied strongly in the latter half as robust corporate earnings, resilient economic data and moderating inflation raised hopes for a soft landing and supported prospects for interest rate cuts in 2024. Global fixed income markets generated mixed returns, with high yield bonds outperforming investment grade bonds. At the outset, geopolitical risks weighed on sentiment. Sovereign bonds sold off as sticky inflation led to higher for longer interest rate expectations. However, towards the end of 2023, global bonds rebounded sharply, supported by robust economic data releases and weakening inflation. Towards the end of the period, markets pushed out interest rate cut expectations and hawkish remarks by the US Federal Reserve led to a rise in bond yields.

Fidelity Funds - Global Multi Asset Defensive Fund aims to achieve a better downside profile versus a blend of 20% MSCI All Country World Net Total Return EUR Index and 80% Bloomberg Global Aggregate EUR Hedged Index on a rolling three-year basis. This is an objective and not a guarantee. The fund does not use a comparative index for performance purposes. The fund generated positive returns over the review period. The allocation to Japanese equities and global fixed income were the primary contributors to returns. Gains in the Japanese equity market were driven by extended buying by overseas investors. Market participants were encouraged by a steady stream of corporate governance related developments and largely positive domestic earnings.

Management of the fund changed on 1 January 2024, with Mario Baronci and Becky Qin becoming the new portfolio managers. While the fund's investment objective remains the same, the portfolio construction and asset allocation has changed, moving from Core, Defensive and Alpha positioning to Strategic Asset Allocation, Tactical Asset Allocation and Hedging positioning.

Global Multi Asset Dynamic Fund

FUND SIZE AS AT 30.04.2024 : USD 148 MILLION

Manager's Overview

Global equities posted strong gains over the period. Equity markets rose modestly in the first half of the period but came under pressure in October amid expectations for 'higher for longer' interest rates and geopolitical tensions in the Middle East. Nevertheless, equities rallied strongly from November onwards as major developed market central banks left policy rates unchanged. Healthy economic data and easing inflation supported prospects for interest rate cuts in 2024. Global bond markets faced significant volatility during the period, with corporate bonds outperforming sovereign bonds. While government bond yields surged to multi-year highs, global bonds rebounded sharply from November. That said, sticky core inflation and major central banks' higher for longer stance on interest rates weighed on market sentiment. Corporate bonds outperformed as credit spreads broadly tightened. Elsewhere, emerging market debt posted positive returns.

The fund generated positive returns but underperformed the comparative index over the period. The positive performance was driven by the gradual addition to equities, particularly US equity strategies, which were supported by resilient economic data and hopes that the US Federal Reserve (Fed) would start to cut interest rates soon. Japanese equities enhanced gains as the Bank of Japan ended its negative interest rate policy. In Asia, Taiwanese and Korean equities added value, boosted by the artificial intelligence (AI) related rally. Within fixed income, the allocation to investment grade corporate bonds, income-paying bonds and high yield bonds enhanced gains.

The managers remained nimble on equity positioning, balancing the near-term upside potential due to still resilient economic activities and the US Fed's decision to end rate hikes, versus the possible medium-term downside risk stemming from a tightening in credit conditions and further growth headwinds. The managers maintain conviction in the technology cycle bottoming out thesis and switched focus from companies enabling and adopting Al to companies using Al, as these companies are underpriced and have a positive outlook. They retained the bias towards quality and growth companies as economic activities remain resilient. They also favour Asian and Chinese markets as economic data surprised to the upside. Within fixed income, the managers remain cautious on duration and prefer credit exposure. Overall, they continue to dynamically allocate assets across asset classes, sectors and regions, with the aim to provide long-term capital growth across market cycles.

Global Multi Asset Growth & Income Fund 4

FUND SIZE AS AT 30.04.2024 : USD 100 MILLION

Manager's Overview

Global equities advanced and global bonds delivered mixed returns over the period. Above target inflation, tight monetary policy, concerns around the US government debt ceiling and its rating downgrade weighed on sentiment. Nevertheless, markets rallied strongly in the latter half of the period due to robust corporate earnings, resilient economic data and moderating inflation. Overall, central banks kept interest rates steady at historically high levels and yields rose.

The fund generated positive returns and attractive income in line with its objective. Within equities, the core allocation to global and US equities added value on the back of improved investor confidence. Relative value positions in Japan, financials and information technology equities also acted as tailwinds. The exposure to hybrid bonds and structured credit strategies enhanced gains. This was partially offset by the allocation to US government and investment grade bonds, Asian high yield bonds and infrastructure equities.

As markets are likely to be more resilient, the managers are happy to take more risk on a tactical basis and prefer equities as a liquid and high-quality way to add beta. Meanwhile, they are cautious on high-risk credit and duration assets. Over the year, the exposure to longer-dated US Treasuries and UK government bonds (Gilts) was sold. Instead positions were purchased in Austrian government bonds given good risk-return asymmetry, and a global bond strategy. The managers sold the position in Asian high yield bonds due to wavering conviction and took some profits from South African bonds as inflation data was not supportive. Within equities, the exposure to Asian and Chinese equities, including real estate, was reduced given China's sluggish recovery. Positions in Japanese financials, European energy, health care, Brazil and emerging market equities were sold. Instead the managers bought holdings in Latin America, Greece and Hong Kong equities. Within alternatives, they consolidated some strategies into higher conviction names and added a position in the gold miner strategy.

Global Multi Asset Income Fund 6,8

FUND SIZE AS AT 30.04.2024 : USD 5,251 MILLION

Manager's Overview

Global equities advanced while global bonds delivered mixed returns over the period. Above target inflation, tight monetary policy, concerns around the US government debt ceiling and its rating downgrade weighed on investor sentiment. Nevertheless, markets rallied strongly in the latter half of the period due to robust corporate earnings, resilient economic data and moderating inflation. Overall, central banks kept interest rates steady at historically high levels and yields rose.

The fund generated positive returns and attractive income in line with its objectives. The exposure to global equities contributed to returns on the back of improved investor confidence, while tactical positions in the financials and energy sectors added value. The allocation to hybrids, high yield and global investment grade bonds contributed to returns as credit spreads tightened. The exposure to structured credit strategies also enhanced gains. This was partially offset by the exposure to infrastructure equities and US government bonds, which were negatively impacted by rising yields. The allocation to Asian and Chinese assets also held back gains as China's property sector continued to struggle.

As markets are likely to be more resilient, the managers are taking more risk on a tactical basis and prefer equities as a liquid and high-quality way to add beta. Meanwhile, they remain cautious on high-risk credit and duration assets. Over the year, given inflationary pressures, the managers reduced the portfolio's interest rate risk by trimming the exposure to investment grade bonds and longer dated government bonds, and adding to US bond hedges. They also took some profits in South African bonds, where inflation data was not supportive, and instead added exposure to Italian and Spanish government bonds given their strong fundamentals. Within equities, the managers sold holdings in Asia, China, European energy, Brazil and emerging markets, and raised the allocation to US energy and Japan. They added a position in Korean equities on account of their attractive valuations and consolidated the alternatives exposure into higher conviction names.

Multi Asset Dynamic Inflation Fund 4,8

FUND SIZE AS AT 30.04.2024 : USD 136 MILLION

Manager's Overview

Global equities posted strong gains over the period. Equity markets rose modestly in the first half of the period but came under pressure in October amid expectations for 'higher for longer' interest rates and geopolitical tensions in the Middle East. Nevertheless, equities rallied strongly from November onwards as major developed market central banks left policy rates unchanged. Healthy economic data and easing inflation supported prospects for interest rate cuts in 2024. Global bond markets faced significant volatility during the period, with corporate bonds outperforming sovereign bonds. Government bond yields surged to multi-year highs but rebounded sharply from November. Sticky core inflation and major central banks' higher for longer stance on interest rates weighed on market sentiment. Corporate bonds outperformed as credit spreads broadly tightened. Elsewhere, emerging market debt posted positive returns.

FF SMART Defensive Fund was repurposed to FF Multi Asset Dynamic Inflation fund on 6 September 2023. Prior to the repurpose, the fund generated negative returns. In the Beta component, inflation-linked, government and investment grade corporate bonds weighed on performance. However, the exposure to growth and yield assets mitigated some drawdown. The Alpha component also hampered returns, though the Systematic Global Macro strategy added value.

Since repurpose, the Multi Asset Dynamic Inflation fund has generated positive returns. Within Growth Assets, credit exposure, developed and emerging markets equities, and growth alternatives contributed to performance. Within Diversifying Assets, commodities, quantitative strategies and trend following strategies added value.

The fund invests in traditional and non-traditional asset classes and will use passive and active building blocks. It combines top-down macroeconomic insights with bottom-up research to make tactical asset allocation decisions, while using strategies, including quantitative signals and qualitative insights, to dynamically manage downside risk. The fund will dynamically change its asset allocation based on the prevailing inflation regime.

Sustainable Multi Asset Income Fund 8

FUND SIZE AS AT 30.04.2024 : USD 86 MILLION

Manager's Overview

Global equities advanced and global bonds delivered mixed returns over the period. Above target inflation, tight monetary policy, concerns around the US government debt ceiling and its rating downgrade weighed on investor sentiment. Nevertheless, markets rallied strongly in the latter half of the period due to robust corporate earnings, resilient economic data and moderating inflation. Overall, central banks kept interest rates steady at historically high levels and yields rose.

The fund generated positive returns and attractive income in line with its objectives. Within equities, the allocation to global, US and Japanese stocks contributed to returns on the back of improved investor confidence, while the tactical position in financials was supported by a high interest rate environment. The exposure to global high yield and hybrid bonds added value as credit spreads tightened, while the allocation to emerging market local currency debt also contributed modestly to returns. This was partially offset by infrastructure equities and US government bonds, which were negatively impacted by rising yields.

Given that markets are likely to be more resilient, the managers are taking more risk on a tactical basis and prefer equities as a liquid and high-quality way to add beta. Meanwhile, they remain cautious on high-risk credit and duration assets. Over the year, given inflationary pressures, the managers reduced the portfolio's interest rate risk by lowering the exposure to investment grade bonds and longer dated government bonds. They also took some profits in South African bonds, where inflation data was not supportive. Instead, the managers added to Italian and Spanish government bonds given their strong fundamentals and dovish stance by the European Central Bank. Within equities, the managers added some tactical bets, including positions in liquid broad index options in Europe to better capture upside potential while limiting downside risks. They introduced Korean equities and increased the exposure to Japanese financials on account of better valuations, while also adding core holdings in sustainable global equities.

Asia Pacific Strategic Income Fund

FUND SIZE AS AT 30.04.2024 : USD 55 MILLION

Manager's Overview

The US Secured Overnight Financing Rate (SOFR) and 3 month London Inter-Bank Offered Rate (LIBOR) rate rose during the period. The US Federal Reserve (Fed) continued to raise interest rates until July 2023, but subsequently kept rates unchanged until April 2024. Since September, markets were supported by the decline in inflation data, with investors anticipating an imminent cut in interest rates. However, the rates market remained volatile as investors continued to adjust expectations for the first rate cut by the US Fed, given stronger than expected US economic data and sticky inflation. In Asia, Chinese policymakers unveiled targeted macroeconomic support measures to stimulate the economy. Credit spreads continued to tighten in 2024, as consumption and tourism related activity rebounded during the Lunar New Year. Outside of China, Asian manufacturing activity remained robust in most countries except Thailand, which remained in contractionary territory over the last few months.

The fund posted positive returns during the period. From a sector perspective, the exposure to banks & brokers, quasi-sovereigns, technology & communications and consumer cyclicals added notable value. Conversely, the property sector detracted from relative returns. From an issuer perspective, SK Hynix, Fosun International and Studio City Finance were among the top contributors to performance, while Road King Infrastructure, Shimao Group and China SCE Group held back gains. On the ratings front, the exposure to all rating buckets added value.

The manager continues to prioritise liquidity, followed closely by stability in the investment process, especially in an environment where interest rate volatility and geopolitical risks remain elevated. A diversified portfolio of short-dated high-quality bonds gives the fund the ability to stay nimble. From a duration perspective, the ultra-short duration focus allows the team to benefit from the inverted US dollar yield curve, while on the credit side, a focus on high-quality names provides a good defensive mechanism.

Asian Bond Fund

FUND SIZE AS AT 30.04.2024 : USD 1,037 MILLION

Manager's Overview

US dollar denominated Asian investment grade bonds posted positive returns as credit spreads tightened during the period. At the start of the period, external demand continued to soften amid market headwinds, including a global growth slowdown, tight financial conditions and persistent geopolitical tensions. Nonetheless, from September until the end of 2023, investor sentiment improved as Chinese policymakers unveiled targeted macroeconomic support measures to stimulate the economy. Credit spreads continued to tighten in 2024 as consumption and tourism related activity rebounded during the Lunar New Year. On the policy front, the People's Bank of China (PBoC) cut key lending rates. Outside of China, Asian manufacturing activity remained robust in most countries except Thailand, which remained in contractionary territory over the last few months.

The fund underperformed the comparative index over the period. From a sector perspective, the underweight allocation to quasi-sovereigns and the marginal overweight in property names weighed on relative performance. Conversely, the overweight exposure to banks & brokers, treasury and consumer cyclicals contributed to relative returns. From an issuer perspective, the overweight allocation to ACC Technologies, Ping An Real Estate and Minejesa Capital added notable value, while the bias towards Longfor Holdings and Rkpf Overseas held back gains. On the ratings front, the allocation to all rating buckets except BBB rated bonds weighed on returns.

Asian investment grade fundamentals remain supportive, as much of the global growth remains in Asia. Within Asia, the manager is neutral on credit risk in China amid structural changes and headwinds in the Chinese economy. Outside of China, the manager is positive on South Korea and Japanese financials due to their stability and potential tailwinds from the Bank of Japan's yield curve control (YCC) adjustment. That said, the fund's positioning remains focused on yield generation with its bottom-up security selection approach. The manager continues to look for high quality and short dated issuers that generate high

Asian High Yield Fund

FUND SIZE AS AT 30.04.2024 : USD 1,609 MILLION

Manager's Overview

Asian high yield bonds posted positive returns as credit spreads tightened during the period. At the start of the period, external demand continued to soften amid market headwinds, including a global growth slowdown, tight financial conditions and persistent geopolitical tensions. Nonetheless, from September until the end of 2023, investor sentiment improved as Chinese policymakers unveiled targeted macroeconomic support measures to stimulate the economy and restore market confidence amid growing concerns over its economic recovery. China's property sector also benefited from signs of stronger support. Credit spreads continued to tighten in 2024, as markets remained resilient in China as consumption and tourism related activity surged during the Lunar New Year period. On the policy front, the People's Bank of China (PBoC) announced that it would cut its reserve ratio requirement (RRR) by 0.50 percentage points from February. The PBoC also announced a 0.25percentage point cut to its five-year loan prime rate (LPR), the biggest cut ever since it revamped its LPR system in 2019.

The fund posted positive returns but underperformed the comparative index over the review period. From a sector perspective, the underweight allocation to government related and logistic names weighed on relative performance. In this regard, holdings in government bonds of Sri Lanka and Global Logistic held back gains. However, the exposure to banks and consumer cyclicals contributed to performance over the period. From an issuer perspective, the underweight stance in Country Garden, Agile Group Holdings and Sino China added notable value. On the ratings front, the exposure to all rating buckets except BBB and above rated bonds weighed on returns.

Asian high yield bonds have benefited from the global risk rally since late last year. Spreads have compressed and are at/below historical averages. However, the manager believes that the asset class remains attractive given its relatively stable fundamentals versus developed markets and high all-in yields. The asset class has been benefiting from a broad-based rally with a default rate (ex-China property) of less than 1% over the past two years. Thus, the manager maintained an underweight stance in Asian high yield bonds and is of the view that an overall quality bias towards BB rated bonds, coupled with selective exposure to single B and below rated bonds, would be a reasonable way to capture risk-reward going forward. That said, the fund's positioning revolves around capturing income and remains light on credit risk, while focusing on single-name selection.

China High Yield Fund

FUND SIZE AS AT 30.04.2024 : USD 700 MILLION

Manager's Overview

Chinese high yield bonds posted negative returns while credit spreads tightened during the period. At the start of the period, external demand continued to soften amid market headwinds, including a global growth slowdown, tight financial conditions and persistent geopolitical tensions. Nonetheless, from September until the end of 2023, investor sentiment improved as Chinese policymakers unveiled targeted macroeconomic support measures to stimulate the economy and restore market confidence amid growing concerns over its economic recovery. China's property sector also benefited from signs of stronger support. Credit spreads continued to tighten in 2024, as markets remained resilient in China, supported by the surge in consumption and tourism related activity during the Lunar New Year period. On the policy front, the People's Bank of China (PBoC) announced that it would cut its reserve ratio requirement (RRR) by 0.50 percentage points from February. The PBoC also announced a 0.25 percentage point cut to its five-year loan prime rate (LPR), the biggest cut ever since it revamped its LPR system in 2019.

The fund posted negative returns but outperformed the comparative index over the review period. The fund's credit strategy contributed to returns, while term structure positioning and yields held back gains. From a sector perspective, an underweight stance in property, banks and government related sectors were the key contributors to relative performance. In this regard, the underweight allocation to Country Garden, Sino China and Road King added notable value. However, the overweight exposure to some property names such as New World Development, KWG Group and Future Land detracted significantly from returns. Moreover, the underweight stance in Fosun International held back relative gains. On the ratings front, the exposure to all rating buckets except BB rated bonds contributed to performance.

Chinese high yield bonds have benefited from the global risk rally since late last year. Spreads have compressed and are at/below historical averages. However, the manager believes that the asset class remains attractive given its relatively stable fundamentals versus developed markets and high all-in yields. The asset class has been benefiting from a broad-based rally with a default rate (ex-China property) of less than 1% over the past two years. Thus, the manager maintained an underweight stance in Chinese high yield bonds and is of the view that an overall quality bias towards BB rated bonds, coupled with selective exposure to single B and below rated bonds, would be a reasonable way to capture risk-reward going forward. That said, the fund's positioning revolves around capturing income and remains light on credit risk, while focusing on single-name selection.

China RMB Bond Fund 8

FUND SIZE AS AT 30.04.2024 : CNY 1,574 MILLION

Manager's Overview

Offshore renminbi investment grade bonds (Dim Sum) generated positive returns, supported by high coupon income. US Treasury yields rose as inflation remained elevated and central banks maintained their restrictive monetary policies. Chinese onshore yields fell across the curve as the People's Bank of China (PBOC) continued to ease its monetary policy. US dollar denominated Chinese high yield bonds posted negative returns, while US dollar denominated Chinese investment grade bonds performed positively, driven by narrower credit spreads. Sentiment around the Chinese property sector remained weak, as supportive policy measures failed to shore up weak demand. On the economic front, China's annualised GDP for the first quarter of 2024 was stronger-than-expected at 5.3%, due to strong performances in the industrials and services sectors.

The fund generated positive returns over the period. High coupon income supported performance. Conversely, the credit component and overall term structure positioning, particularly for US dollar denominated bonds, weighed on returns. Encouragingly, the positioning in renminbi offshore duration aided performance. At a sector level, the allocation to property and other financials held back gains, while quasi/sovereigns, bank and brokers added value. At an issuer level, holdings in Dah Sing Bank and United Overseas Bank supported returns, while the exposure to China SCE Property Holdings hampered performance.

The fund focuses on three main markets, including renminbi-denominated markets, whether onshore or offshore, to provide stable carry to anchor returns; and US dollar-denominated markets to provide tactical trading opportunities given heightened volatility. The managers believe that Chinese government bonds yields are likely to remain steady and eventually decline as a challenging economic recovery would lead to bets on further monetary easing. Consequently, they have a long renminbi duration position and increased the exposure to align the strategy towards a renminbi denominated bond focused product.

Emerging Market Corporate Debt Fund 8

FUND SIZE AS AT 30.04.2024 : USD 69 MILLION

Manager's Overview

Emerging market bonds posted positive returns over the period, with hard currency sovereigns outperforming hard currency corporates and local currency bonds. Within hard currency bonds, tighter credit spreads were a key driver of returns, but some of these gains were offset by higher US Treasury yields. Credit spreads tightened as sentiment improved towards the end of 2023, with high yield bonds outperforming investment grade bonds. Within hard currency sovereigns, Pakistan, Venezuela and Argentina were among the best performers, while Panama, Uruguay and Chile were among the notable laggards. Pakistan reached a staff-level agreement with the International Monetary Fund (IMF) and unlocked a \$1.1 million tranche out of the \$3 billion bailout package. Meanwhile, local currency bond returns were driven by positive currency moves, coupled with lower local yields.

The fund posted positive returns but underperformed the comparative index over the review period. Credit positioning detracted from relative performance, while yields added value. At a country level, China was a key detractor from relative returns while Colombia supported performance. Meanwhile, overweight positions in Chinese property names held back gains, while the bias towards Columbian utility name EnfraGen added value.

The managers have an underweight stance in investment grade debt and are cautious on highly levered parts of the universe, resulting in an underweight credit beta position. The uncertainty over the timing of monetary policy changes is likely to weigh on global growth as the year progresses. Given that emerging market debt is sensitive to global growth, the managers remain strategically cautious and could reduce credit exposure further. At a country level, key overweights are in Colombia, Russia and Mexico, while the fund is underweight

Emerging Market Debt Fund 8

FUND SIZE AS AT 30.04.2024 : USD 679 MILLION

Manager's Overview

Emerging market bonds posted positive returns over the period, with hard currency sovereigns outperforming hard currency corporates and local currency bonds. Within hard currency bonds, tighter credit spreads were a key driver of returns, but some of these gains were offset by higher US Treasury yields. Credit spreads tightened as sentiment improved towards the end of 2023, with high yield bonds outperforming investment grade bonds. Within hard currency sovereigns, Pakistan, Venezuela and Argentina were among the best performers, while Panama, Uruguay and Chile were among the notable laggards. Pakistan reached a staff-level agreement with the International Monetary Fund (IMF) and unlocked a \$1.1 million tranche out of the \$3 billion bailout package. Meanwhile, local currency bond returns were driven by positive currency moves, coupled with lower local yields.

The fund posted positive returns but underperformed the comparative index over the period. Term structure positioning detracted from returns, while credit positioning added value. At a country level, China and Oman were the key detractors from performance, while Mexico and Ukraine enhanced gains. An overweight position in sovereign bonds of Ukraine added value, while the exposure to Chinese high yield property names weighed on returns.

The managers currently maintain an overweight credit beta position in emerging market hard currency debt but have been reducing the exposure to the asset class. The managers still have conviction in the high yield/investment grade compression trade, where the distressed part of the index has continued to outperform amid some fundamental developments, including debt restructuring, greater access to the market, and announcements of IMF support. The virtuous circle of multilateral support and market access can keep turning for now, and good fundamentals may help to weather a broader risk-off period. At a country level, some of the largest overweights are in Mexico, Egypt and Panama, while the fund is underweight in Indonesia, Ukraine and Oman.

Emerging Market Local Currency Debt Fund 4,8

FUND SIZE AS AT 30.04.2024 : USD 158 MILLION

Manager's Overview

Emerging market bonds posted positive returns over the period, with hard currency sovereigns outperforming hard currency corporates and local currency bonds. Within hard currency bonds, tighter credit spreads were a key driver of returns, but some of these gains were offset by higher US Treasury yields. Credit spreads tightened as sentiment improved towards the end of 2023, with high yield bonds outperforming investment grade bonds. Within hard currency sovereigns, Pakistan, Venezuela and Argentina were among the best performers, while Panama, Uruguay and Chile were among the notable laggards. Pakistan reached a staff-level agreement with the International Monetary Fund (IMF) and unlocked a \$1.1 million tranche out of the \$3 billion bailout package. Meanwhile, local currency bond returns were driven by positive currency moves, coupled with lower local yields.

The fund posted positive returns but underperformed the comparative index over the year, largely due to its duration positioning. Meanwhile, its currency positioning supported returns, with the positioning in the Egyptian pound and Nigerian naira adding value, while the exposure to the Ghanaian cedi held back gains. On the duration front, the overweight stance in Mexican local duration weighed on returns, while the overweight position in Brazilian local duration enhanced gains.

The managers have reduced the overweight position in emerging market local rates since the start of the year. Emerging market long duration positions have been highly correlated to US rates despite the cycle of interest rate reductions in the region being well advanced and desynchronised from the US rates cycle. The managers have reduced some lower beta, lower conviction emerging market rates positions to reduce the portfolio's overall active duration overweight. The managers are almost neutral in emerging market currencies, but are long on the US dollar and selected frontier market currencies. The delay in the US Federal Reserve's easing cycle while emerging market central banks largely continue with their interest rate reduction cycles makes the managers more cautious towards this asset class.

Emerging Market Total Return Debt Fund 4,8

FUND SIZE AS AT 30.04.2024 : USD 190 MILLION

Manager's Overview

Emerging market bonds posted positive returns over the period, with hard currency sovereigns outperforming hard currency corporates and local currency bonds. Within hard currency bonds, tighter credit spreads were a key driver of returns, but some of these gains were offset by higher US Treasury yields. Credit spreads tightened as sentiment improved towards the end of 2023, with high yield bonds outperforming investment grade bonds. Within hard currency sovereigns, Pakistan, Venezuela and Argentina were among the best performers, while Panama, Uruguay and Chile were among the notable laggards. Pakistan reached a staff-level agreement with the International Monetary Fund (IMF) and unlocked a \$1.1 million tranche out of the \$3 billion bailout package. Meanwhile, local currency bond returns were driven by positive currency moves, coupled with lower local yields.

The fund posted positive returns but underperformed the comparative index over the period. Term structure positioning weighed on returns, while credit positioning enhanced gains. At a country level, China was the key detractor from performance, while Mexico and Colombia added value. The allocation to Chinese property names held back gains. Meanwhile, the long exposure to Mexican state-owned utility Comision Federal de Electricidad aided performance. In terms of duration, the long position in Mexican and Ghanaian local duration held back gains, while the long position in Brazilian local duration added value.

The managers currently maintain an overweight credit beta position in emerging market hard currency debt, but have been reducing this position. The managers still have conviction in the high yield/investment grade compression trade, where the distressed part of the index has continued to outperform. The managers have reduced the overweight exposure to emerging market local rates since the start of the year. Emerging market long duration positions have been highly correlated to US rates despite the cycle of interest rate reductions in the region being well advanced and desynchronised from the US rates cycle. The managers are almost neutral in emerging market currencies, but are long on the US dollar and selected frontier market currencies.

Euro Bond Fund 8

FUND SIZE AS AT 30.04.2024 : EUR 1,109 MILLION

Manager's Overview

European bond markets posted positive returns despite fragile sentiment due to elevated interest rates and geopolitical tensions. Markets bounced back strongly towards the end of 2023 amid cooling inflation. The rally continued at the start of 2024, driven by resilient economic and corporate data as well as several dovish cues from major central banks. However, the tide reversed towards the end of the period amid speculation that central banks will not ease their monetary policies as quickly as previously hoped. The European Central Bank (ECB) maintained interest rates at record-high levels during its latest meeting. However, officials indicated that a looser monetary policy would be appropriate if inflation continues to converge towards the central bank's 2% target. In the corporate credit space, investment grade bonds posted positive returns as credit spreads tightened globally.

The fund posted positive returns and outperformed the comparative index over the review period. Interest rate risk exposure held back gains as sovereign bond yields rose significantly, especially at the front end. In contrast, credit strategy (particularly issuer selection) and coupon income supported returns. At the sector level, positions in financials, energy and utility names added value, while holdings in quasi-sovereign names held back gains. From an issuer perspective, Deutsche Bank and ASR Nederland were among the top contributors to returns, while Thames Water and Credit Agricole Assurances held back gains.

The managers believe that the ECB is likely to make the first move (before the US Federal Reserve) and cut interest rates at its June meeting. This is based on their conviction that the European economy cannot withstand the current ECB base rate and there is a clear path for European rates to move lower. They believe that on a quality-adjusted basis, European investment grade bond spreads look attractive and have a bias towards financials and utility names. On the duration front, they maintain the overweight duration position in core European government bonds and underweight duration position in peripheral debt, as the risk-reward balance remains unattractive.

Euro Corporate Bond Fund 4,8

FUND SIZE AS AT 30.04.2024 : EUR 430 MILLION

Manager's Overview

European bond markets posted positive returns despite fragile sentiment due to elevated interest rates and geopolitical tensions. Markets bounced back strongly towards the end of 2023 amid cooling inflation. The rally continued at the start of 2024, driven by resilient economic and corporate data as well as several dovish cues from major central banks. However, the tide reversed towards the end of the period amid speculation that central banks will not ease their monetary policies as quickly as previously hoped. The European Central Bank (ECB) maintained interest rates at record-high levels during its latest meeting. However, officials indicated that a looser monetary policy would be appropriate if inflation continues to converge towards the central bank's 2%target. In the corporate credit space, investment grade bonds posted positive returns as credit spreads tightened globally.

The fund posted positive returns and outperformed the comparative index over the review period. Interest rate risk exposure held back gains as sovereign bond yields rose significantly, especially at the 10-year maturity. In contrast, credit strategy (particularly issuer selection) and coupon income supported returns. At the sector level, positions in financials, quasi-sovereigns, energy, utility and consumer cyclical names added value, while holdings in other financials and consumer non-cyclical names held back gains. From an issuer perspective, Deutsche Bank and TotalEnergies were among the top contributors to returns, while Thames Water and Credit Agricole Assurances held back

The managers believe that the ECB is likely to make the first move (before the US Federal Reserve) and cut interest rates at its June meeting. This is based on their conviction that the European economy cannot withstand the current ECB base rate and there is a clear path for European rates to move lower. They believe that on a quality-adjusted basis, European investment grade bond spreads look attractive and have a bias towards financials and utility names. On the duration front, they maintain the overweight duration position in core European government bonds and underweight duration position in peripheral debt, as the risk-reward balance remains unattractive.

Euro Short Term Bond Fund 4,8

FUND SIZE AS AT 30.04.2024 : EUR 2,134 MILLION

Manager's Overview

European bond markets posted positive returns despite fragile sentiment due to elevated interest rates and geopolitical tensions. Markets bounced back strongly towards the end of 2023 amid cooling inflation. The rally continued at the start of 2024, driven by resilient economic and corporate data as well as several dovish cues from major central banks. However, the tide reversed towards the end of the period amid speculation that central banks will not ease their monetary policies as quickly as previously hoped. The European Central Bank (ECB) maintained interest rates at record-high levels during its latest meeting. However, officials indicated that a looser monetary policy would be appropriate if inflation continues to converge towards the central bank's 2%target. In the corporate credit space, investment grade bonds posted positive returns as credit spreads tightened globally.

The fund posted positive returns and outperformed the comparative index over the review period. Both the interest rate risk exposure and the credit strategy (particularly issuer selection) supported returns. At the sector level, positions in financials, energy, utility and consumer cyclical names contributed to performance, while holdings in quasi-sovereign names held back gains. The exposure to index credit default swap (CDS) hedges also weighed on returns. From an issuer perspective, Deutsche Bank and Commerzbank were among the top contributors to performance, while Thames Water and Credit Agricole Assurances held back gains.

The managers believe that the ECB is likely to make the first move (before the US Federal Reserve) and cut interest rates at its June meeting. This is based on their conviction that the European economy cannot withstand the current ECB base rate and there is a clear path for European rates to move lower. They believe that on a quality-adjusted basis, European investment grade bond spreads look attractive and have a bias towards financials and utility names. On the duration front, they maintain the overweight duration position in core European government bonds and underweight duration position in peripheral debt, as the risk-reward balance remains unattractive.

European High Yield Fund 8

FUND SIZE AS AT 30.04.2024 : EUR 2,369 MILLION

Manager's Overview

The European high yield asset class posted strong returns over the period. Credit spreads tightened, supported by elevated yields, robust technicals and strong balance sheets. At the onset of the period, markets were positive as regional banking stress eased, investors saw robust earnings and economic data was mixed. The European Central Bank raised the deposit rate by 0.25 percentage points each in May, June, July and September. However, the last quarter of 2023 kept global sentiment in check due to the narrative of higher-forlonger interest rates and tension in the Middle East given the tragic events in Israel and Gaza. In 2024, investor sentiment improved due to easing inflation and robust economic data. However, markets came under pressure in March due to a significant increase in single-name volatility.

The fund posted positive returns and underperformed the index over the period. This was largely due to the positioning in higher yielding sectors and a favorable credit selection strategy. From a sector perspective, the bias against capital goods and communications weighed on relative returns, while the overweight stance in banks & brokers and other financials contributed to performance. The positioning in higher yielding sectors and a favorable credit selection strategy also enhanced gains. At an issuer level, holdings in Banca Monte De Paschi, NewDay Bond Co and DTEK Energy were among the top contributors to performance, while the exposure to Ardagh Packaging and Altice France held back gains. From a rating perspective, all buckets ended in positive territory, except for holdings in CCC and below rated bonds.

The manager maintained a tactical underweight stance in European high yield bonds as spreads do not compensate for the substantial increase in idiosyncratic risks. The majority of the universe is skewed towards BB rated bonds with solid fundamentals, but the more aggressive treatment of bondholders with exposure to the challenged capital structures of several large issuers raises contagion risks if rates stay higher for longer. However, the fund still has significant exposure to high rated, high performing and non-distressed

Flexible Bond Fund 8

FUND SIZE AS AT 30.04.2024 : GBP 117 MILLION

Manager's Overview

Global fixed income markets endured a volatile period amid a significant shift in the landscape of inflation and interest rate expectations. Moreover, the US government's debt ceiling crisis in the second quarter and the Fitch's downgrade of the US debt rating in the third quarter last year weighed on investor sentiment. Geopolitical factors, including the conflict and tragic events in Israel and Gaza, also kept global sentiment in check. In contrast, credit markets rallied, with corporate bonds outperforming government bonds as spreads tightened on the back of stable corporate fundamentals.

The fund posted positive returns but underperformed the comparative index over the period. The US dollar, euro and sterling duration positions hampered returns as expectations for 'higher for longer' interest rates, helped by strong US economic and inflation data, weighed on markets and led to a sell-off in sovereign bonds. However, these losses were partially offset by tactical Canadian dollar and Japanese yen duration positions. The fund's credit exposure also supported performance. At a sector level, the allocation to financials, consumer and real estate contributed to returns. From an issuer perspective, CPI Property Group, AA Bond Co and Heimstaden Bostad were among the leading performers, while Mosaic Solar Loans, Petrofac and Wolfspeed held back gains.

Looking ahead, there are growing risks of no interest rate cuts by the US Federal Reserve (Fed) this year, which would result in tighter financial conditions. Against this backdrop, the managers used the recent rally in spreads to take profits and trim overall credit risk, especially via high yield bonds and emerging market debt. Meanwhile, they selectively added allocation to investment grade bonds and rotated out of long maturity names into shorter-maturity names to benefit from curve inversion and boost liquidity. On the duration front, they scaled back the headline duration to 5.6 years using US-dollar and sterling duration to navigate short-term volatility, while retaining the euro duration position, where the risk-reward looks more balanced.

Global Bond Fund 8

FUND SIZE AS AT 30.04.2024 : USD 1,643 MILLION

Manager's Overview

Global markets experienced a volatile period, as inflation remained elevated and central banks maintained their restrictive monetary policies. Moreover, the US government's debt ceiling crisis in the second quarter of 2023 and Fitch's downgrade of the US debt rating in the third quarter of 2023 weighed on investor sentiment. Geopolitical factors, including the escalating conflict and tragic events in Israel and Gaza, also kept global sentiment in check. Consequently, sovereign bonds yields surged to the highest level since 2021 in October 2023 and ended the period higher. Within credit, corporate bonds performed well, as spreads tightened across markets.

The fund posted negative returns and underperformed the index over the period. Both term structure positioning and credit strategy added relative value, while coupon income detracted from returns. The fund's short duration positions in the Japanese yen and Canadian dollar aided performance as sovereign bond yields rose significantly over the period. From a sector perspective, the overweight allocation to banks and brokers contributed to returns. At an issuer level, the holding in Teva Pharmaceutical Industries enhanced gains. On a negative note, the overweight stance in the US dollar and sterling duration held back gains, while an underweight allocation to peripheral European markets hurt returns.

The managers expect the broader consumer slowdown to play out over the next 3-6 months, while other drivers of growth are likely to make small net negative contributions to growth in 2024. The base case for US growth supports the prospect of a few interest rate cuts by the US Federal Reserve. The managers therefore retain their long duration position in the US dollar and sterling and short position in European peripheral markets (on the back of still-stretched valuations). Within credit, the managers remain skewed towards national champion banks, particularly in Europe, given their attractive valuations. Otherwise, they are concentrated in short-dated, high-quality corporate names as long-dated names are now at the tightest spread level since the 2008

Global Corporate Bond Fund 4,8

FUND SIZE AS AT 30.04.2024 : USD 330 MILLION

Manager's Overview

Global markets experienced a volatile period, as inflation remained elevated and central banks maintained their restrictive monetary policy. Moreover, the US government's debt ceiling crisis in the second quarter of 2023 and Fitch's downgrade of the US debt rating in the third quarter of 2023 weighed on investor sentiment. Geopolitical factors, including the escalating conflict and tragic events in Israel and Gaza, also kept global sentiment in check. Consequently, sovereign bond yields surged to their highest level since 2021 and ended the period higher. Within credit, corporate bonds performed well, as spreads tightened across markets.

The fund posted positive returns and performed in line with the index over the period. Credit positioning supported performance due to favourable credit selection. The exposure to the other financials, technology and communications sectors added notable value, while holdings in utilities weighed on returns. At an issuer level, the overweight allocation to Roadster Finance DAC and AA Bond Co Limited were among top contributors to returns, while the exposure to Thames Water Utilities Finance held back gains. On the rates front, an overweight stance in US dollar and sterling duration detracted the most from performance as sovereign bond yields rose significantly over the period.

Global economic growth is skewed to the downside over the medium term as higher interest rates continue to weigh on consumer and corporate balance sheets. Against this backdrop, the managers retain a defensive stance on global investment grade bonds, with a neutral to slightly long beta position on average. Meanwhile, they continue to de-risk the portfolio by trimming the exposure to longer-dated bonds as valuations are becoming expensive. Instead, the managers are rotating into shorter-dated names to benefit from curve inversion and boost liquidity. On the rates side, the manager has a long duration position, mostly at the front-end and belly of the sterling and euro yield curve, given the weakness in Germany and concerns about UK fiscal sustainability.

Global High Yield Fund 4,8

FUND SIZE AS AT 30.04.2024 : USD 171 MILLION

Manager's Overview

Global high yield bond markets generated positive returns as credit spreads tightened during review period, due to elevated yields, robust technicals and strong balance sheets. However, the US government's debt ceiling crisis in the second quarter of 2023 and Fitch's downgrade of the US debt rating in the third quarter of 2023 weighed on investor sentiment. Geopolitical factors, including the escalating conflict and tragic events in Israel and Gaza, also kept global sentiment in check. Towards the end of 2023, global bonds rebounded sharply in anticipation of a change in central banks' monetary policy. 2024 started on an optimistic note, but sentiment soon turned negative as a succession of hawkish developments led investors to price out the number of interest rate

The fund posted positive returns but underperformed the index over the period. The fund's credit strategy and term structure positioning held back gains. At the sector level, the overweight position in banks & brokers and communications contributed to performance. In this respect, the overweight stance in Vivion Investments and Dish Network Corporation added value. Conversely, the bias against consumer non-cyclicals and property negatively impacted relative performance, as the property sector rebounded. At a single name level, the exposure to Ardagh Packaging and Petrofac held back gains. From a ratings level, positions in higher rated bonds (BB, BBB and above) added value, while B and CCC and below rated bonds weighed on performance.

The manager maintains an underweight stance in global high yield bonds as yields are healthy historically, but spreads leave limited margin for error and remain unappealing in a historical context. Despite the global high yield market experiencing resilient growth, stressed and distressed capital structures are experiencing elevated price volatility as creditor unfriendly tactics emerge. That said, maintaining conviction in riskier credits will depend on risk management sensitivity, embedded spread compensation and issuer alignment with creditor

Global Hybrids Bond Fund 4,8

FUND SIZE AS AT 30.04.2024 : USD 128 MILLION

Manager's Overview

Global fixed income markets generated mixed returns over the period. Financial turmoil appeared to settle down at the start of the period and volatility subsided. However, this was short lived as sentiment weakened due to concerns over geopolitical risks given the unfolding conflict and tragic events in Israel and Gaza. Towards the end of 2023, global bonds rebounded sharply on expectations that global central banks would start to cut interest rates. 2024 started on an optimistic note, but sentiment shifted towards the end of the period, as investors realized that they may have become too hopeful for an interest rate cut by the US Federal Reserve in March. Overall, central banks kept interest rates steady at historically high levels and yields rose. In the corporate credit space, credit spreads tightened broadly, with high yield bonds outperforming investment grade bonds.

The fund posted positive returns but underperformed the index over the period. The fund's yield coupled with its term structure positioning detracted from relative returns, while its favorable credit strategy added value. The overweight stance in banks and brokers and technology and communications contributed to performance, led by KBC Group, Barclays Bank and Spanish company Telefonica Europe. Conversely, the underweight stance in insurance and utility held back gains. For instance, the underweight stance in Allianz Insurance and Scottish Power Energy Network Holdings weighed on returns. From a rating perspective, holdings in BB and below rated bonds contributed to performance, while other rating buckets held back gains.

The manager remains neutral in corporate hybrids, given its relatively resilient performance in recent months. In the hybrids space, short call securities appear attractive due to yield curve inversion and a favorable convexity profile in the event of a call. However, after a beta rally, the manager sees less scope for significant compression but continues to like short call additional tier 1 (AT1) bonds given their high propensity to call.

Global Income Fund 8

FUND SIZE AS AT 30.04.2024 : USD 709 MILLION

Manager's Overview

Global fixed income markets endured a volatile period amid a significant shift in the landscape for inflation and interest rate expectations. Moreover, the US government's debt ceiling crisis in the second quarter and the Fitch's downgrade of the US debt rating in the third quarter of 2023 weighed on investor sentiment. Geopolitical factors, including the escalating conflict and tragic events in Israel and Gaza, also kept global sentiment in check. In contrast, credit markets rallied, with corporate bonds outperforming government bonds as spreads tightened on the back of stable corporate fundamentals.

The fund posted positive returns over the period, primarily driven by its credit exposure. At a sector level, the allocation to the financials and consumer sectors added value. From an issuer perspective, Societe Generale, Intesa Sanpaolo and Deutsche Bank were among the leading performers, while Dalian Wanda Group, MC Brazil Downstream and Garfunkelux Holdco held back gains. Meanwhile, the US dollar, euro and sterling duration positions hampered returns as expectations for 'higher for longer' interest rates, helped by strong US economic and inflation data, weighed on markets and led to a sell-off in sovereign bonds.

Looking ahead, there are growing risks of no interest rate cuts by the US Federal Reserve (Fed) this year, which would result in tighter financial conditions. Against this backdrop, the managers continue to focus on security selection and alpha opportunities. They used the recent rally in spreads to take profits and trim overall credit risk, especially via high yield bonds. Meanwhile, they selectively added allocation to investment grade bonds and European securitised names given their attractive yields and stable fundamentals. Over the year, the managers actively managed the fund's duration exposure, but gradually increased the fund's headline duration to 4.9 years using US-dollar and euro duration positions to benefit from the continued inversion in sovereign bond yield curves.

Global Inflation-linked Bond Fund 8

FUND SIZE AS AT 30.04.2024 : USD 645 MILLION

Manager's Overview

Global markets experienced a volatile period as inflation remained elevated and central banks maintained their restrictive monetary policy stance. Moreover, a US government debt ceiling crisis in the second quarter and a downgrade by Fitch of the US debt rating in the third quarter of 2023 weighed on investor sentiment. Geopolitical factors, including the conflict and tragic events in Israel and Gaza, also kept global sentiment in check. Inflation-linked sovereign bond yields continued their upward trajectory and ended the period higher.

The fund posted negative absolute returns and underperformed the index over the period. Real yields rose sharply across major markets. Consequently, long positions in US and UK real duration weighed on relative returns, while a short position in European real yields in 2023 supported performance. Inflation breakevens declined in European markets as energy prices fell, while US and UK inflation breakevens rose as core services inflation remained sticky. Consequently, the fund's long duration position in UK breakevens via inflation swaps supported performance. Moreover, we maintain a cross-market long US 30-year inflation versus short eurozone 30-year inflation position, which enhanced gains as US breakevens widened relative to those in the eurozone.

Recent inflation has been mixed, with US inflation surprising to the upside, while inflation in the eurozone and UK remains on track. The managers remain long real duration in major markets versus the index as they believe that inflation data has had an outsized reaction in rates markets. Elsewhere, inflation breakevens are starting to show value as they are currently priced for a benign inflation outlook. This outlook might be threatened by longer term inflationary dynamics such as the green transition, de-globalisation and geopolitical tensions. Diverging global inflation rates also present opportunities for active inflation-linked bond managers. For example, the managers retain their crossmarket view, whereby they are long US and short eurozone long-term inflation expectations.

Global Short Duration Income Fund 8

FUND SIZE AS AT 30.04.2024 : USD 755 MILLION

Manager's Overview

Global fixed income markets endured a volatile period amid a significant shift in the landscape for inflation and interest rate expectations. Moreover, the US government's debt ceiling crisis in the second quarter and the Fitch's downgrade of the US debt rating in the third quarter last year weighed on investor sentiment. Geopolitical factors, including the conflict and tragic events in Israel and Gaza, also kept global sentiment in check. In contrast, credit markets rallied, with corporate bonds outperforming government bonds as spreads tightened on the back of stable corporate fundamentals.

The fund posted positive returns over the period, primarily driven by its credit exposure. At a sector level, the allocation to the financials and consumer sectors contributed to returns. From an issuer perspective, Ford Motor Company, Societe Generale and CEMEX were among the leading performers, while Dalian Wanda Group, National Express Group and Altice France held back gains. Meanwhile, the US dollar, euro and sterling duration positions hampered returns as expectations for 'higher for longer' interest rates, helped by strong US economic and inflation data, weighed on markets and led to a sell-off in sovereign bonds.

Looking ahead, there are growing risks of no interest rate cuts by the US Federal Reserve (Fed) this year, which would result in tighter financial conditions. Against this backdrop, the managers continue to focus on security selection and alpha opportunities. They used the recent rally in spreads to take profits and trim overall credit risk, especially via high yield bonds. Meanwhile, they selectively added allocation to investment grade bonds and European securitised names given their attractive yields and stable fundamentals. Over the year, the managers gradually added to the fund's duration exposure, but maintained it at around 2.0 years over the last few months of the period to benefit from the continued inversion in US Treasuries.

Structured Credit Income Fund 4,8

FUND SIZE AS AT 30.04.2024 : EUR 62 MILLION

Manager's Overview

European credit markets posted strong returns and credit spreads tightened during the review period. At the start of the period, markets were positive as regional banking stress eased. The European Central Bank raised the deposit rate by 0.25 percentage points each in May, June, July and September. Markets rallied in the last quarter of 2023 as economic momentum reinforced investors' hope for a soft landing amid easing inflation, positive corporate earnings and resilient economic data. In 2024, the European collateralised loan obligation (CLO) market saw robust issuance trends, due the improving outlook for the CLO equity arbitrage, driven by tighter CLO liability spreads. This new-issue volume was bolstered by a resurgence in CLO reset and refinancing activity, while consistent demand from repayments/liquidations further supported issuance volumes. However, the non-prime portion of the residential mortgagebacked security (RMBS) and asset-backed security (ABS) markets witnessed headwinds to varying degrees. UK legacy and non-conforming mortgages remain in focus, given the ongoing pickup in delinquencies, interest rate moves and cost-of-living crisis impacts. Meanwhile, the commercial mortgage-backed security (CMBS) market remains under pressure and was fairly muted on primary issuance due to higher borrowing costs and lower valuations in the current high interest rate environment.

The fund generated positive returns over the period. Its favourable yield component and credit selection supported returns. On the ratings front, the allocation to BBB rated securities added the most value.

The fund has strategic allocation to CLOs diversified across sectors, coupled with tactical exposure to RMBS, CMBS and ABS, mostly rated investment grade. The target is to provide an annualised return of European Short-Term Rate + 4%

Sustainable Asian Bond Fund 4,8

FUND SIZE AS AT 30.04.2024 : USD 18 MILLION

Manager's Overview

US dollar denominated Asian investment grade bonds posted positive returns over the period as credit spreads tightened. At the start of the period, external demand continued to soften amid market headwinds, including a global growth slowdown, tight financial conditions and persistent geopolitical tensions. Nonetheless, from September until the end of 2023, investor sentiment improved as Chinese policymakers unveiled targeted macroeconomic support measures to stimulate the economy. Credit spreads continued to tighten in 2024 as consumption and tourism related activity rebounded during the Lunar New Year. On the policy front, the People's Bank of China (PBoC) cut key lending rates. Outside of China, Asian manufacturing activity remained robust in most countries except Thailand, which remained in contractionary territory over the last few months.

The fund posted positive returns but underperformed the comparative index over the period. From a sector perspective, the underweight allocation to quasisovereigns and the marginal underweight in energy names weighed on relative returns. Conversely, the overweight exposure to banks & brokers, consumer cyclicals and technology and communications supported performance. From an issuer perspective, the overweight allocation to Shimao Holdings and Bank of East Asia and underweight stance in Country Garden added notable value. Meanwhile, the bias towards Longfor Holdings and Hysan (MTN) Limited and the underweight allocation to Standard Chartered held back gains. On the ratings front, the exposure to all A and above rated bonds weighed on returns, while BBB and below rated bonds added value.

Fundamentals remain supportive in the Asian investment grade bond market, as much of the global growth remains in Asia. Within the region, the manager is neutral on credit risk in China amid structural changes and headwinds in the Chinese economy. Outside of China, the manager is positive on South Korean and Japanese financials due to their stability and potential tailwinds from the Bank of Japan's yield curve control (YCC) adjustment. That said, the fund's positioning remains focused on yield generation given its bottom-up security selection approach. The manager continues to look for high quality and short dated issuers that generate high coupon income.

Sustainable Climate Bond Fund 4,8

FUND SIZE AS AT 30.04.2024 : USD 319 MILLION

Manager's Overview

Global bond markets endured significant volatility due to concerns over geopolitical risks given the unfolding conflict and tragic events in Israel and Gaza. Furthermore, resilient economic data and sticky inflation prints led investors to expect higher for longer interest rates, as a result of which sovereign bonds sold off. Towards the end of 2023, global bonds rebounded sharply on expectations that global central banks would start to cut interest rates. The positive sentiment continued into 2024 but soon shifted, as investors realised that they may have become too hopeful for an interest rate cut by the US Federal Reserve (Fed) in March. Overall, central banks kept interest rates steady at historically high levels and yields rose.

The fund posted positive returns but underperformed the comparative index over the review period, largely due to its interest rate risk exposure and credit strategy. However, its stable yield component including carry and income supported returns. At the sector level, positions in banking, insurance, energy, and technology and communications held back gains, while quasi-sovereigns, other financials and industrial other added value. From an issuer perspective, Bank of America and Thames Water detracted from returns, while Roadster Finance and Deutsche Bank were among the top performers.

The US economy is still outperforming other developed markets, but the managers are seeing signs of easing momentum supported by hard data, including an unexpected uptick in the unemployment rate. They believe the stress on consumers at the lower end is well known, but other income cohorts are also seeing depletion of excess savings. For the US, other drivers of growth are likely to make small net negative contributions to growth in 2024, as fiscal spending will be a small drag on the GDP and business expenditure is expected to be lower compared to 2023. The base case for US growth supports the prospect of fewer interest rate cuts by the US Fed this year. Elsewhere, the inflation landscape is clearer in Europe and the UK. The receding headline inflation, combined with stable but slow growth, supports the case for an earlier interest rate cut in Europe than in the US

Sustainable Strategic Bond Fund 8

FUND SIZE AS AT 30.04.2024 : USD 458 MILLION

Manager's Overview

Global fixed income markets endured a volatile period amid a significant shift in the landscape for inflation and interest rate expectations. Moreover, the US government's debt ceiling crisis in the second quarter and the Fitch's downgrade of the US debt rating in the third quarter last year weighed on investor sentiment. Geopolitical factors, including the conflict and tragic events in Israel and Gaza, also kept global sentiment in check. In contrast, credit markets rallied, with corporate bonds outperforming government bonds as spreads tightened on the back of stable corporate fundamentals.

The fund posted positive returns but underperformed the comparative index over the period. The US dollar, euro and sterling duration positions hampered returns as expectations for 'higher for longer' interest rates, helped by strong US economic and inflation data, weighed on markets and led to a sell-off in sovereign bonds. However, these losses were partially offset by the tactical Japanese yen duration position. The fund's credit exposure also enhanced gains. At a sector level, the allocation to the financials and consumer sector contributed to returns. From an issuer perspective, AA Bond Co, HSBC Holdings and Alpha Bank were among the leading performers, though Petrofac, Mosaic Solar Loans and Wolfspeed held back gains.

Looking ahead, there are growing risks of no interest rate cuts by the US Federal Reserve (Fed) this year, which would result in tighter financial conditions. Against this backdrop, the managers used the recent rally in spreads to take profits and trim overall credit risk, especially via high yield bonds and emerging market debt. Meanwhile, they selectively added allocation to investment grade bonds and rotated out of long maturity names into shorter-maturity names to benefit from curve inversion and boost liquidity. On the duration front, they scaled back the headline duration to 3.9 years using US-dollar and sterling duration to navigate short-term volatility, while retaining the euro duration position, where the risk-reward looks more balanced.

US Dollar Bond Fund 8

FUND SIZE AS AT 30.04.2024 : USD 3,721 MILLION

Manager's Overview

US bond markets remained volatile over the period, due to concerns over geopolitical risks, resilient economic data and sticky inflation prints, which led investors to expect higher for longer interest rates. Towards the end of 2023, market recovered in anticipation of rate cuts, but sentiment soon turned negative as a succession of hawkish developments led investors to price out the number of cuts by the US Fed. Overall, the Fed kept the interest rates at historically high levels and yields shifted upwards.

The fund posted negative returns and underperformed the comparative index over the period. Interest rate risk exposure held back gains as sovereign bond yields rose significantly, specially at the 10-year maturity level. In contrast, credit exposure and coupon income supported returns. At the sector level, positions in banks and brokers, other financials and consumer cyclicals contributed to performance, while holdings in quasi-sovereign bonds and industrial other held back gains. From an issuer perspective, Teva Pharmaceutical and Société Générale were among the top contributors to returns, while Citibank and Verizon Communication held back gains.

The rates market continues to focus on individual data points when pricing in interest rate cuts and consequently remains very volatile. The resilience in labour markets and growth data, along with an uncertain fiscal trajectory, led to a recent rise in yields. The managers believe that the current high yields represent an attractive opportunity for investors to add duration. The managers expect that inflation will continue to fall in line with expectations, and that risks to growth and labour market health are skewed to the downside over the medium term. They continue to see value in US and UK government bond yields at these levels, as they remain well in excess of long-term potential growth rates. Within credit, they remain biased towards the financials sector, where spreads are less expensive. Sector overweights are currently in industrials and health care, while an underweight stance is maintained in the technology, media, and telecommunication and consumer sectors.

US High Yield Fund

FUND SIZE AS AT 30.04.2024 : USD 2,544 MILLION

Manager's Overview

The US high yield bond market generated positive returns as credit spreads tightened during the period, amid stable corporate fundamentals, healthy new issue volumes and supportive technical factors. However, the US government's debt ceiling crisis in the second quarter of 2023 and Fitch's downgrade of the US debt rating in the third quarter of 2023 weighed on investor sentiment. Towards the end of 2023, markets recovered in anticipation of rate cuts, but sentiment soon turned negative as a succession of hawkish developments led investors to price out the number of rate cuts by the US Federal Reserve (Fed).

The fund posted positive returns but underperformed the index over the period. The fund's credit strategy and yield detracted from relative performance. At the sector level, the underweight stance in capital goods and banks & brokers weighed on returns, while the allocation to communications and basic industry contributed to performance. From an issuer standpoint, the exposure to Ardagh Packaging weighed on returns. However, positions in Uniti Group and Dish Network added value. At a rating level, holdings in Bs and CCC and below rated bonds held back gains, while an underweight stance in BB-rated bonds added relative value.

The manager maintains an underweight stance in US high yield bonds as yields are healthy historically, but spreads leave limited margin for error and remain unappealing in a historical context. The US economy remains robust, as evidenced by strong economic data releases; however, the US Fed's policy challenges remain. Many sectors of the US economy can operate at positive real rates unless there is a material slowdown in the labor market or an exogenous shock. If higher quality companies can preserve margins, they will prove less rate-sensitive than anticipated. That said, maintaining conviction in riskier credits will depend on risk management sensitivity, embedded spread compensation and issuer alignment with creditor interests.

Euro Cash Fund 8

FUND SIZE AS AT 30.04.2024 : EUR 735 MILLION

Manager's Overview

The European Central Bank (ECB) raised interest rates multiple times over the period to control soaring inflation. The ECB maintained interest rates at recordhigh levels during its latest meeting; however, officials indicated that a looser monetary policy would be appropriate if inflation continues to converge towards the central bank's 2% target. ECB President Christine Lagarde emphasized that the bank's future moves will be data-dependent rather than following a predetermined rate trajectory. On the data front, the eurozone exited the recession as its four top economies delivered much stronger than anticipated growth. However, the expected cooling of inflation failed to materialize. GDP for the first quarter of 2024 rose by 0.3% quarter-on-quarter, beating expectations for 0.1% growth. This marks the strongest pace of growth in the last 18 months. The flash composite Purchasing Managers' Index (PMI) fell from 54.4 in March 2023 to 50.3 in March 2024, but rose to 51.4 in April 2024 as the recovery in business activity in the eurozone gained momentum.

The fund prioritized yield enhancement along with security of capital and a strong liquidity profile, while adhering to its strict credit quality guidelines. The managers hold a large portion of the portfolio in highly liquid securities, in accordance with the key aim of maintaining liquidity and capital preservation. At the end of the review period, the fund's weighted average maturity (WAM) stood at 58 days.

The portfolio strategy remains conservative. The focus on credit quality remains high, with exposure to issuers rated Aa3 or higher at 54%. The portfolio is also well diversified across regions. A high level of liquidity is maintained, with approximately 44% of net assets maturing in 7 days or less.

US Dollar Cash Fund 8

FUND SIZE AS AT 30.04.2024 : USD 1,911 MILLION

Manager's Overview

The US Federal Reserve (Fed) raised its benchmark interest rates in May and July 2023 by 0.25 percentage points each to control soaring inflation. Towards the end of 2023, however, the central bank adopted an unexpectedly dovish stance and forecast a 0.75 percentage point interest rate cut in 2024. However, the US Fed continued to maintain interest rates at 5.25–5.5% at its latest meeting as inflation remains elevated. From a macroeconomic standpoint, recent US GDP growth slowed more than expected, coming in at 1.6% against expectations of 2.4%. This was the slowest pace in nearly two years amid a surge in imports and a reduction in government spending. The unemployment rate increased to 3.8% in March 2024 from 3.5% in March 2023. The Personal Consumption Expenditures (PCE) price index for March 2024, fell to 2.8% on an annualized basis from 4.2% in March 2023. The S&P Global US manufacturing Purchasing Managers' Index (PMI) fell to 50.0 in April 2024, lower than the 50.2 recorded in March 2024.

The fund prioritized security of capital and a strong liquidity profile along with yield enhancement, while adhering to its strict credit quality guidelines. The managers hold a large portion of the portfolio in highly liquid securities in accordance with the key aim of maintaining liquidity and capital preservation. At the end of the review period, the fund's weighted average maturity (WAM) stood at 45 days.

The portfolio strategy remains conservative. The focus on credit quality remains high, with the exposure to issuers rated Aa3 or higher at 63%. The portfolio is also well diversified across regions. A high level of liquidity is maintained, with 46% of net assets maturing in 7 days or less.

Fidelity Target[™] 2020 Fund

FUND SIZE AS AT 30.04.2024 : USD 12 MILLION

Manager's Overview

Global fixed income markets generated mixed returns over the period, with high yield bonds outperforming investment grade bonds. At the start of the period, financial turmoil appeared to settle down as volatility subsided. However, concerns over geopolitical risks due to the unfolding conflict and tragic events in Israel and Gaza weighed on market sentiment. Furthermore, sovereign bonds sold off as sticky inflation led investors to expect higher for longer interest rates. Towards the end of 2023, global bonds rebounded sharply, supported by robust economic releases and weakening inflation. Towards the end of the period, expectations for interest rate cuts were pushed out and hawkish remarks by the US Federal Reserve (Fed) led to a rise in bond yields.

The fund underperformed the comparative index over the period as expenses outweighed the positive contribution from cash instruments. The underlying US Dollar Cash strategy posted positive returns on an absolute basis. The managers hold a large portion of the portfolio in highly liquid securities, in accordance with its key aim of maintaining liquidity and preserving capital.

The fund follows a dynamic asset allocation model, which will consist of 100% cash at maturity. The monthly migration path towards the final portfolio is set to have an increasing exposure to bonds and cash, and a decreasing weight in equities over time until maturity. In line with this, the fund remains fully invested in cash and short-term instruments.

Fidelity Target™ 2025 Fund

FUND SIZE AS AT 30.04.2024 : EUR 226 MILLION

Manager's Overview

Global equities rose over the 12-month period to April 2024. Markets delivered muted performance over the first half of the period due to aggressive monetary policies to curb inflation. Concerns around the debt ceiling and a rating downgrade for government debt in the US, along with geopolitical tensions in the Middle East also weighed on sentiment. Nevertheless, equities rallied strongly in the latter half as robust corporate earnings, resilient economic data and moderating inflation raised hopes for a soft landing and supported prospects for interest rate cuts in 2024. Global fixed income markets generated mixed returns, with high yield bonds outperforming investment grade bonds. At the outset, geopolitical risks weighed on sentiment. Furthermore, sovereign bonds sold off as sticky inflation led to higher for longer interest rates expectations. However, towards the end of 2023, global bonds rebounded sharply, supported by robust economic releases and weakening inflation. Towards the end of the period, expectations for interest rate cuts were pushed out and hawkish remarks by the US Federal Reserve (Fed) led to a rise in bond

The fund underperformed the comparative index over the period. In particular, strategy selection in global aggregate bonds and US equities weighed on returns. In fixed income, the underlying Euro Bond strategy detracted from performance due to its term structure positioning. Within equities, the underlying US Core strategy weighed on returns in light of its overweight allocation to the materials sector. Meanwhile, the Sustainable Research Enhanced US Equity strategy added value, supported by security selection in the financials and information technology sectors.

The fund follows a dynamic asset allocation model, which will consist of 100% cash at maturity. The monthly migration path towards the final portfolio is set to have an increasing exposure to bonds and cash, and a decreasing weight in equities over time until maturity. Over the period, the exposure to equities was reduced in favour of fixed income, cash and alternatives.

Fidelity Target™ 2030 Fund

FUND SIZE AS AT 30.04.2024 : EUR 400 MILLION

Manager's Overview

Global equities rose over the 12-month period to April 2024. Markets delivered muted performance over the first half of the period due to aggressive monetary policies to curb inflation. Concerns around the debt ceiling and a rating downgrade for government debt in the US, along with geopolitical tensions in the Middle East also weighed on sentiment. Nevertheless, equities rallied strongly in the latter half as robust corporate earnings, resilient economic data and moderating inflation raised hopes for a soft landing and supported prospects for interest rate cuts in 2024. Global fixed income markets generated mixed returns, with high yield bonds outperforming investment grade bonds. At the outset, geopolitical risks weighed on sentiment. Furthermore, sovereign bonds sold off as sticky inflation led to higher for longer interest rates expectations. However, towards the end of 2023, global bonds rebounded sharply, supported by robust economic releases and weakening inflation. Towards the end of the period, expectations for interest rate cuts were pushed out and hawkish remarks by the US Federal Reserve (Fed) led to a rise in bond

The fund underperformed the comparative index over the year. In equities, the Sustainable Asia Equity strategy detracted from performance due to security selection in the information technology and consumer discretionary sectors. In fixed income, security selection in the emerging market debt strategy, particularly the underlying Sustainable USD Emerging Market strategy, weighed on returns due to a rise in US Treasury yields. Meanwhile, the exposure to Sustainable Research Enhanced US Equity strategy added value due to stock picking in the financial sector. Tactical asset allocation decisions also contributed to performance.

The fund follows a dynamic asset allocation model, which will consist of 100% cash at maturity. The monthly migration path towards the final portfolio is set to have an increasing exposure to bonds and cash, and a decreasing weight in equities over time until maturity.

Fidelity Target[™] 2045 Fund ⁴

FUND SIZE AS AT 30.04.2024 : EUR 190 MILLION

Manager's Overview

Global equities rose over the 12-month period to April 2024. Markets delivered muted performance over the first half of the period due to aggressive monetary policies to curb inflation. Concerns around the debt ceiling and a rating downgrade for government debt in the US, along with geopolitical tensions in the Middle East also weighed on sentiment. Nevertheless, equities rallied strongly in the latter half as robust corporate earnings, resilient economic data and moderating inflation raised hopes for a soft landing and supported prospects for interest rate cuts in 2024. Global fixed income markets generated mixed returns, with high yield bonds outperforming investment grade bonds. At the outset, geopolitical risks weighed on sentiment. Furthermore, sovereign bonds sold off as sticky inflation led to higher for longer interest rates expectations. However, towards the end of 2023, global bonds rebounded sharply, supported by robust economic releases and weakening inflation. Towards the end of the period, expectations for rate cuts were pushed out and hawkish remarks by the US Federal Reserve (Fed) led to a rise in bond yields.

The fund underperformed the comparative index over the year. Strategy selection in emerging market equities weighed on returns. In particular, the Sustainable Asia Equity strategy detracted from performance due to security selection in the information technology (IT) sector. The European Dynamic Growth strategy weighed on returns given its underweight stance in the financial sector. Meanwhile, the Sustainable Research Enhanced US Equity strategy added value, supported by security selection in the financials and IT sectors.

Fidelity Target[™] 2050 Fund ⁴

FUND SIZE AS AT 30.04.2024 : EUR 151 MILLION

Manager's Overview

Global equities rose over the 12-month period to April 2024. Markets delivered muted performance over the first half of the period due to aggressive monetary policies to curb inflation. Concerns around the debt ceiling and a rating downgrade for government debt in the US, along with geopolitical tensions in the Middle East also weighed on sentiment. Nevertheless, equities rallied strongly in the latter half as robust corporate earnings, resilient economic data and moderating inflation raised hopes for a soft landing and supported prospects for interest rate cuts in 2024. Global fixed income markets generated mixed returns, with high yield bonds outperforming investment grade bonds. At the outset, geopolitical risks weighed on sentiment. Furthermore, sovereign bonds sold off as sticky inflation led to higher for longer interest rates expectations. However, towards the end of 2023, global bonds rebounded sharply, supported by robust economic releases and weakening inflation. Towards the end of the period, expectations for rate cuts were pushed out and hawkish remarks by the US Federal Reserve (Fed) led to a rise in bond yields.

The fund underperformed the comparative index over the year. Strategy selection in emerging market equities weighed on returns. In particular, the Sustainable Asia Equity strategy detracted from performance due to security selection in the information technology (IT) sector. The European Dynamic Growth strategy weighed on returns given its underweight stance in the financial sector. Meanwhile, the Sustainable Research Enhanced US Equity strategy added value, supported by security selection in the financials and IT sectors.

Fidelity Target™ 2020 (Euro) Fund ⁴

FUND SIZE AS AT 30.04.2024 : EUR 47 MILLION

Manager's Overview

Global fixed income markets generated mixed returns over the period, with high yield bonds outperforming investment grade bonds. At the start of the period, financial turmoil appeared to settle down as volatility subsided. However, concerns over geopolitical risks due to the unfolding conflict and tragic events in Israel and Gaza weighed on market sentiment. Furthermore, sovereign bonds sold off as sticky inflation led investors to expect higher for longer interest rates. However, towards the end of 2023, global bonds rebounded sharply, supported by robust economic releases and weakening inflation. Towards the end of the period, expectations for interest rate cuts were pushed out and hawkish remarks by the US Federal Reserve (Fed) led to a rise in bond yields.

The fund underperformed the comparative index over the period as expenses outweighed the positive contribution from cash instruments. The underlying Euro Cash strategy posted positive returns on an absolute basis. The managers hold a large portion of the portfolio in highly liquid securities, in accordance with its key aim of maintaining liquidity and preserving capital.

The fund follows a dynamic asset allocation model, which will consist of 100% cash at maturity. The monthly migration path towards the final portfolio is set to have an increasing exposure to bonds and cash, and a decreasing weight in equities over time until maturity. In line with this, the fund remains fully invested in cash and short-term instruments.

Fidelity Institutional Target™ 2020 (Euro) Fund 1,4,5

FUND SIZE AS AT 30.04.2024 : EUR 53 MILLION

Manager's Overview

Global equities rose over the 12-month period to April 2024. Markets delivered muted performance over the first half of the period due to aggressive monetary policies to curb inflation. Concerns around the debt ceiling and a rating downgrade for government debt in the US, along with geopolitical tensions in the Middle East weighed on sentiment. Nevertheless, equities rallied strongly in the latter half as robust corporate earnings, resilient economic data and moderating inflation raised hopes for a soft landing and supported prospects for interest rate cuts in 2024. Global fixed income markets generated mixed returns, with high yield bonds outperforming investment grade bonds. At the start of the period, geopolitical risks weighed on sentiment. Furthermore, sovereign bonds sold off as sticky inflation led to higher for longer interest rates expectations. However, towards the end of 2023, global bonds rebounded sharply, supported by robust economic releases and weakening inflation. Towards the end of the period, expectations for interest rate cuts were pushed out and hawkish remarks by the US Federal Reserve (Fed) led to a rise in bond

The fund underperformed the comparative index over the period. In Equities, The Fidelity European Dynamic Growth strategy weighed on returns due to its underweight stance in financials sector. However, the Fidelity Sustainable Research Enhanced US Equity ETF added value, supported by security selection in the financials and real estate sectors. In fixed income, the underlying Fidelity Euro Bond strategy performed positively due to its favourable credit exposure and yield component.

The fund follows a dynamic asset allocation model. The monthly migration path towards the final portfolio is set to have an increasing exposure to bonds and cash and a decreasing weight in equities over time until maturity. Over the period, the allocation to equities and bonds was marginally increased, while the exposure to cash was reduced.

Fidelity Institutional Target™ 2025 (Euro) Fund 1,4,5

FUND SIZE AS AT 30.04.2024 : EUR 333 MILLION

Manager's Overview

Global equities rose over the 12-month period to April 2024. Markets delivered muted performance over the first half of the period due to aggressive monetary policies to curb inflation. Concerns around the debt ceiling and a rating downgrade for government debt in the US, along with geopolitical tensions in the Middle East also weighed on sentiment. Nevertheless, equities rallied strongly in the latter half as robust corporate earnings, resilient economic data and moderating inflation raised hopes for a soft landing and supported prospects for interest rate cuts in 2024. Global fixed income markets generated mixed returns, with high yield bonds outperforming investment grade bonds. At the start of the period, geopolitical risks weighed on sentiment. Furthermore, sovereign bonds sold off as sticky inflation led to higher for longer interest rates expectations. However, towards the end of 2023, global bonds rebounded sharply, supported by robust economic releases and weakening inflation. Towards the end of the period, expectations for interest rate cuts were pushed out and hawkish remarks by the US Federal Reserve (Fed) led to a rise in bond

The fund underperformed the comparative index over the year. The underlying listed alternatives weighed on performance, primarily due to the allocation to the renewable energy infrastructure sector. In equities, the Fidelity Global Energy strategy detracted from returns, weighed down by security selection in the chemicals and semiconductor sectors. Meanwhile, the Fidelity Sustainable Research Enhanced US Equity strategy added value, supported by security selection in the real estate sector. In fixed income, the Fidelity Euro Bond strategy enhanced gains, driven by its favourable credit exposure and yield component.

The fund follows a dynamic asset allocation model. The monthly migration path towards the final portfolio is set to have an increasing exposure to bonds and cash and a decreasing weight in equities over time until maturity. Over the period, the allocation to equities, bonds and alternatives was decreased, while the exposure to cash was increased.

FUND SIZE AS AT 30.04.2024 : EUR 634 MILLION

Manager's Overview

Global equities rose over the 12-month period to April 2024. Markets delivered muted performance over the first half of the period due to aggressive monetary policies to curb inflation. Concerns around the debt ceiling and a rating downgrade for government debt in the US, along with geopolitical tensions in the Middle East also weighed on sentiment. Nevertheless, equities rallied strongly in the latter half as robust corporate earnings, resilient economic data and moderating inflation raised hopes for a soft landing and supported prospects for interest rate cuts in 2024. Global fixed income markets generated mixed returns, with high yield bonds outperforming investment grade bonds. At the start of the period, geopolitical risks weighed on sentiment. Furthermore, sovereign bonds sold off as sticky inflation led to higher for longer interest rates expectations. However, towards the end of 2023, global bonds rebounded sharply, supported by robust economic releases and weakening inflation. Towards the end of the period, expectations for interest rate cuts were pushed out and hawkish remarks by the US Federal Reserve (Fed) led to a rise in bond

The fund underperformed the comparative index over the year. The underlying listed alternatives weighed on performance, primarily due to the allocation to the renewable energy infrastructure sector. In equities, the Fidelity Sustainable Research Enhanced Europe Equity ETF detracted from returns, weighed down by security selection in the consumer discretionary sector. Meanwhile, the Fidelity Sustainable Research Enhanced US Equity strategy added value, supported by security selection in the real estate sector. In fixed income, the Fidelity Euro Bond strategy enhanced gains, driven by its favourable credit exposure and yield component. Elsewhere, tactical asset allocation decisions added value and helped to reduce losses.

The fund follows a dynamic asset allocation model. The monthly migration path towards the final portfolio is set to have an increasing exposure to bonds and cash and a decreasing weight in equities over time until maturity.

Multi Asset Target Income 2024 Fund 1,4

FUND SIZE AS AT 30.04.2024 : EUR 23 MILLION

Manager's Overview

Global equities rose over the 12-month period to April 2024. Markets delivered muted performance over the first half of the period due to aggressive monetary policies to curb inflation. Concerns around the debt ceiling and the US government debt's rating downgrade, along with geopolitical tensions in the Middle East also weighed on sentiment. Nevertheless, equities rallied strongly in the latter half as robust corporate earnings, resilient economic data and moderating inflation raised hopes for a soft landing and supported prospects for interest rate cuts in 2024. Global fixed income markets generated mixed returns, with high yield outperforming investment grade bonds. At the outset, geopolitical risks weighed on sentiment. Sovereign bonds sold off as sticky inflation led to higher for longer interest rate expectations. However, towards the end of 2023, global bonds rebounded sharply, supported by robust economic data releases and weakening inflation. Towards the end of the period, markets pushed out interest rate cut expectations and hawkish remarks by US Federal Reserve led to a rise in bond yields.

The fund generated positive returns over the review period; it does not use a comparative index for performance purposes. The fund is scheduled to mature in May 2024. During the period, the exposure to equities and investment grade fixed income within the core component added value. The Alpha component also supported returns, driven by the allocation to the yield curve positioning using 5-year and 30-year spreads. The investment team conducted an extensive review of the fund towards the end of last year. The team made some changes in the investment strategy for the remaining six months to maturity from December 2023, in order to optimise investment outcomes for clients with a focus on drawdown protection. As a result, the team implemented a short duration buy and hold (to fund maturity) strategy, comprised of Italian government bonds, complemented by the team's highest conviction, risk-aware, tactical opportunities, as well as a small allocation to cash for liquidity purposes.

Absolute Return Global Equity Fund 4

FUND SIZE AS AT 30.04.2024 : USD 300 MILLION

Manager's Overview

Global equities rose over the period. Performance was muted in the first half of the period as inflation moderated but remained above target levels and led major central banks to continue to raise interest rates. Concerns around the debt ceiling and a rating downgrade for government debt in the US, along with geopolitical tensions also weighed on sentiment. Nevertheless, equities rallied strongly in the latter half as central banks in major developed markets left policy rates unchanged. Furthermore, robust corporate earnings, resilient economic data and moderating inflationary pressure raised hopes for a soft landing and interest rate cuts in 2024.

The fund delivered strong positive net returns and outperformed the comparative index over the period. Stock selection in communication services, consumer discretionary and information technology (IT), coupled with the long positioning in health care added notable value, while selected holdings in industrials held back gains. At a regional level, emerging markets, Europe ex UK and North America were the key contributors to performance, while Japan weighed on returns. At a stock level, the position in automobiles manufacturer Brilliance China Automotive rose on the back of healthy earnings. It is attractively valued with a strong cash position and solid earnings power. The allocation to social media giant Meta rose. Its shares advanced on investor excitement around artificial intelligence (AI) coupled with strong quarterly earnings, with continued gains expected from robust digital advertising trends.

The Absolute Return Global Equity is a systematically constructed geared long/short absolute return market neutral fund that offers investors a diversified source of absolute returns, with little dependence on overall market movements. It offers exposure to the breadth and depth of Fidelity's fundamental research by taking long exposure in high conviction buy rated companies and short exposure in high conviction sell rated companies in a portfolio of around 150-200 stocks. The strategy aims to deliver positive returns primarily through stock selection; other factor risks are broadly mitigated. Portfolio positioning is therefore a result of the bottom-up stock selection process.

Absolute Return Global Fixed Income Fund 4

FUND SIZE AS AT 30.04.2024 : USD 33 MILLION

Manager's Overview

Global fixed income markets endured a volatile period amid a significant shift in the landscape for inflation and interest rate expectations. Moreover, the US government's debt ceiling crisis in the second quarter and the Fitch's downgrade of the US debt rating in the third quarter of 2023 weighed on investor sentiment. Geopolitical factors, including the escalating conflict and tragic events in Israel and Gaza, also kept global sentiment in check. In contrast, credit markets rallied, with corporate bonds outperforming government bonds as spreads tightened on the back of stable corporate fundamentals.

The fund posted positive returns and outperformed the comparative index over the period, primarily driven by its discretionary model. Within discretionary, the long-short US dollar credit and investment grade credit portfolios were the top performers. The duration positioning also added value. The tactical kiwi and Brazilian real duration positions contributed to returns. However, these gains were partially offset by the US dollar duration position amid a sell-off in US Treasuries. Over the period, the managers reduced the overweight exposure to the US dollar duration position, but retained a preference for US steepener 5s30s position.

The fund invests across the full suite of fixed income markets, exploiting opportunities in credit, rates and currencies, with a focus on relative value and non-directional positions in order to limit market risk factors. The team employs discretionary strategies utilising the full breadth and global reach of Fidelity's investment capabilities. The fund aims to deliver a cash plus 2% return over rolling annual periods in a controlled risk environment, while aiming to generate alpha in different market environments with a focus on downside protection. The fund looks to benefit from rising volatility via strategies that can exploit these environments (such as long/short) and maintains a low correlation with traditional asset classes.

Absolute Return Multi Strategy Fund 4

FUND SIZE AS AT 30.04.2024 : USD 69 MILLION

Manager's Overview

Global equities rose over the 12-month period. Equity markets delivered muted performance over the first half as inflation remained above target levels which led major central banks to continue to raise interest rates. Concerns around the debt ceiling and a rating downgrade for US government debt, along with geopolitical tensions in the Middle East weighed on sentiment. Nevertheless, equities rallied strongly in the latter half as central banks in major developed markets left policy rates unchanged. Robust corporate earnings, resilient economic data and moderating inflationary pressure raised hopes for a soft landing (slowdown in the economy without a recession) and supported prospects for interest rate cuts in 2024. Against this backdrop, equities in the US and Japan gained the most. Emerging markets also ended higher but lagged developed markets. Global fixed income markets generated mixed returns over the period, with high yield bonds outperforming investment grade bonds. At the outset, geopolitical risks weighed on market sentiment. Sovereign bonds sold off as sticky inflation led to higher for longer interest rates expectations. However, towards the end of 2023, global bonds rebounded sharply, supported by robust economic releases and weakening inflation.

The fund generated positive returns and outperformed the comparative index over the review period. The Absolute Return Global Equity strategy was the leading contributor to overall performance. Strong stock selection, particularly within the consumer discretionary and communication services sectors, buoyed returns. The fund was also supported by the position in the Absolute Return European Equity strategy, which benefited from strong security selection within the industrials and consumer staples sectors. Within the fixed income and macro bucket, the exposure to Global Macro strategies enhanced gains, followed by the Fixed Income Absolute Return strategy. Over the period, within the arbitrage bucket, the Goldman Sachs Commodity strategy was sold, while the Fidelity Systematic Global Macro strategy was added back to the portfolio.

Institutional Emerging Markets Equity Fund 8

FUND SIZE AS AT 30.04.2024 : USD 162 MILLION

Manager's Overview

Emerging markets advanced over a period marked by distinct volatility. Sentiment oscillated sharply as markets globally grappled with elevated inflation in the developed world, along with the timeline for interest rate cuts, geopolitical tensions and the pace of the economic recovery in China. In recent months, markets were strengthened by encouraging economic trends such as receding recessionary pressure in the US and rising commodity prices. Chinese equities led gains, supported by solid first-quarter GDP figures, resilient corporate earnings and optimism around policy support. Against this backdrop, all regions posted positive returns, led by Latin America, followed by emerging Asia and emerging Europe, the Middle East and Africa (EMEA).

The fund delivered positive returns during the period and outperformed the comparative index. Stock picking across South Korea, Taiwan and Kazakhstan enhanced gains, while China and Hong Kong weighed on performance. Among sectors, stock picking in information technology and financials were the key drivers of returns. This was offset by the weak performance of the consumer staples and energy sectors. Chinese consumer holdings, including Li Ning (sportswear), Zhongsheng (automobiles) and China Mengniu (dairy) remained subdued amid a weaker consumer environment. Indian online travel business MakeMyTrip continued to benefit from high cash flows, low competitive intensity and stabilising fixed costs, which should support higher margins. Russia's TCS Group, a provider of online retail financial services, which was fully sold in January, also contributed to performance.

Global interest rate policies and weakness in China determined sentiment towards emerging markets. Although emerging markets continued to underperform developed markets, the asset class is trading at a deep discount to developed markets. This backdrop for inflation and interest rates is central to what we believe is an improving outlook for emerging market equities. The focus remains on owning well capitalised businesses with under-levered balance sheets. The fund is conservatively positioned, meaning that the companies owned should be better prepared for what will remain a challenging environment.

Institutional European Larger Companies Fund 1,3,4,5,8

FUND SIZE AS AT 30.04.2024 : EUR 1,086 MILLION

Manager's Overview

European equities rallied over the period, though there was some volatility along the way. Sentiment remained fragile amid elevated interest rates and geopolitical tensions. However, markets bounced back strongly towards the end of 2023 amid cooling inflation. The start of 2024 saw European equities supported by resilient economic and corporate data, as well as a number of dovish cues from major central banks. In April, markets responded negatively to speculation that central banks will not ease their monetary policies as quickly as previously hoped, given resilient growth and sticky inflation data. While the European Central Bank (ECB) maintained interest rates at record-high levels during its April meeting, officials indicated that a looser monetary policy would be appropriate if inflation continues to converge towards its 2% target. ECB President Christine Lagarde emphasised that the bank's future moves will be data-dependent rather than following a predetermined rate trajectory.

The fund generated positive returns but underperformed the index over the period, with sector and style headwinds proving to be a drag on returns. Weak stock selection in the health care and financials sectors, coupled with the underweight allocation to industrials, hampered performance. Reckitt Benckiser was a notable detractor from returns. Its shares declined after a jury in Illinois ordered the company to pay US\$60 million in damages, saying that its Enfamil baby formula led to the death of a premature baby. The lack of exposure to Novo Nordisk detracted significantly from relative returns as it reported betterthan-expected fourth quarter operating profits. On a positive note, the allocation to Associated British Foods (AB Foods) and Inditex added notable value. AB Foods reported strong results for the first half of its fiscal year 2024, with earnings before interest and tax (EBIT) and earnings per share (EPS) above consensus estimates. Inditex rose on the announcement of very strong current trading alongside its FY 2023 results released in March.

The team prefers quality companies that are trading on attractive valuations. The fund typically does well when the valuation gap between the most and least expensive stocks narrows, given that it tends not to own the priciest companies in the market. The team is focussed on finding stocks on low/depressed multiples where fundamentals are solid (not over inflated) and where companies can see decent (rather than stellar) EPS growth over the

Institutional Global Focus Fund 4,8

FUND SIZE AS AT 30.04.2024 : USD 175 MILLION

Manager's Overview

Global equities rose over the 12-month period to April 2024. Equity markets delivered muted performance over the first half of the period as inflation moderated but remained above target levels and led major central banks to continue to raise interest rates. Concerns around the debt ceiling and a rating downgrade for government debt in the US, along with geopolitical tensions in the Middle East also weighed on sentiment. Nevertheless, equities rallied strongly in the latter half of the period as central banks in major developed markets left policy rates unchanged. Furthermore, robust corporate earnings, resilient economic data and moderating inflationary pressure raised hopes for a soft landing and supported prospects for interest rate cuts in 2024.

The fund delivered strong positive returns but underperformed the comparative index over the period. Certain holdings in the financials sector came under pressure, while stock picking in health care and consumer discretionary proved rewarding. At a stock level, the lack of exposure to expensively valued semiconductor company NVIDIA weighed on relative returns. Meanwhile, the holding in HDFC Bank underachieved on margin improvements due to tight liquidity in the system and the bank's focus on costs. This led to weaker than expected growth in low-cost current account, savings account (CASA) deposits due to slower than anticipated branch rollout. Conversely, General Electric was a key contributor to returns on the back of strong demand for aftermarket services as jet delivery delays continue from the pandemic and newer Boeing aircrafts face troubles. The holding in social media platform Meta was also strong, driven by a combination of strong results and euphoria around the potential of generative artificial intelligence (GenAl) to drive engagement, monetisation, advertising optimisation and efficiency.

The fund invests in two categories of stocks, i.e. compounders and transformers. Holdings in the compounders category typically have defensive characteristics, enjoy some pricing power and/or secular growth opportunities. Transformers are businesses that are either witnessing high cyclical growth or are special situations. At a sector level, the fund maintains a significant overweight in high quality businesses within the financials segment, which stand to benefit from interest rate hikes, a strengthening regulatory backdrop, secular growth drivers and the potential for market penetration, especially in emerging markets.
